Special Prizes.—Nearly all of the special prizes were awarded according to the decisions in the regular classes, and we shall notice only a few of the prominent ones. In many cases the animals which would have won were not entered, which will account for the seeming inconsistency of some of the awards. In Class A. Croxteth was given the award for the best pointer over Faust. This decision we cannot indorse. Croxteth is a rare good one, but Faust, in our estimation, is a better one, and should have been placed first.

The Trainer's Prize was won by Mr. Luke W. White, of Bridgeport, Conn., with his pointers Grace and Lalla Rookh, the latter a daughter of Grace and winner of first in the puppy class, and also the special for the best pointer puppy. She is not five nonths old, but is under very good command and obeyed the orders of her master in a manner that shows her intelligence and good training. It gives us great pleasure to state that in training her Mr. White has implicitly followed the instructions as given by us in our series of articles published in Forest Ann Stream, entitled "Training vs. Breaking," and we could ask no better indorsement of their practical value than was exhibited by the little beauty.

In Class T, for the best English setter entered in the open classes, Prince Taxis, winner of first in the imported class, and Prince Taxis was awarded the prize. We could not agree with the judge and believe Fairy Prince to be the best.

Class QQ, for the best dog measuring thirty-four inches at the shoulder, did not fill, as upon applying the tapethirty-two and one half inches was all that could be allowed. We have every a devertal inquiries in regard to this, and one correspondent states his belief that there is no well authenticated instance on record of a dog who stands as high as this, but our correspondent is mistaken, as Mr. Hugh Dalzeil mentio

Class 1.—Champion mastiffs, dogs—1st, Col. Stuart Taylor, New York, Jurth, fawn, 4 yrs., Bruno-Bona.
Class 2.—Champion mastiffs, bisches.—1st, L. C. and H. L. De Zayas, few York, Leah, fawn, 7 yrs., imported.

Class AAA.—Best little red brish pupplies—C. Du Bois Waysbaff's litter (Barkley-Rose).

THE BISMARCK SETTERS.—West Chester, Pa., April 18.—Why is it that, while we hear the virtues of the Gordon, Laverack and Irish setters lauded so hi, hi, no one has stepped forward in defense of the Bismarck? Has this latter animal no standing among sportsmen? We confess our ignorance on the subject, and perhaps would never have given the matter a thought had we not noticed how completely he was ignored in the articles relating to the setter published in Fonest and Stream a short time since. Now, will not some one familiar with the breed give us some information concerning the origin and general field qualities of the Bismarck?—A READER.

A DOG OF ANOTHER COLOR.—Connoisseur of dogs who has observed a fine Irish setter being led by his owner approaching him on the street and certain as to the particular family of the animal by his appearance, addresses owner—"Pardon me, sir, is not your setter an Elcho-Rose?" Owner with evident disgust replies, "An echo rose, no sir, no such thing, my dog is a red Irish setter." Connoisseur departs a sadder and wiser man.

THE BOSTON SHOW.—Dr. Wm. Jarvis, of Claremont, N. H., will judge at the Boston Show the English and Gordon setters and pointers. Dr. J. S. Niven, of London, Ont. will judge all the other classes. Many of the exhibitors at the New York show have made entries, and so far as the quality and number of animals go the show is sure to be a success.

SNAP.—Mr. Thomas G. Budington, of Brocklyn, purchased at the Bench Show the red Irish setter puppy Saup, winner of the first prize. Snap is by Max Wenzell's Chief and Tilly, covnied by (f. Hills, Hudson, N. Y). We congratulate Mr. Budington on his purchase, as Snap is said to have an unusually kind disposition, and will doubtless make a valuable animal.

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be written in print Letzrens, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is male or female, and to know the date of birth and the breed to which it belongs, whether pointer, setter or other. A careful study of the notes in this number of the paper will show just what is wanted.

vast a first of April hoax. 2. We do not know, once had a similar experience off the coast of Lower California.

Bifle and Trap Shooting.

A BRITISH RIFLEMAN.

THE Military Record and Volunteer News, of Glasgow, in its issue of April 5, continues its admirable series of sketches of prominent men in the Volunteer force, by a narrative about Sergeant Herbert P. Miller, whose name is so well known on this side the Atlantic as one of the most intelligent marksmen in the British ranks. Speaking of him and of his work the biographical sketch says:

Speaking of him and of his work the biographical sketch says:

Siaff Sergeant Herbert Percy Miller, Instructor of Musketry in the
19th Middlesex (Bloomsbury) Rifle Volunteers, was born near Bath in
19th Middlesex (Bloomsbury) Rifle Volunteers, was born near Bath in
19th Middlesex (Bloomsbury) Rifle Volunteers, was born near Bath in
19th Volunteer movement he took an Interest in the cutsu, and in Petruary, 1860, he joined the regiment in which he still serves, and is now
the second in seniority on a roll 1005 strong. He is one of the few
remaining members who were sworn in by a Bow street magistrate in
8t. Giles' Church. He has taken part in all the Volunteer events that
have since occurred, and was present as a private at the Boyal
Review in Hyde Park on the 22d June, 1860. At an early period of
his service he was promoted to the rank of sergeant, and in that
capacity was on duty in the demonstration made in honor of the
entry into London of the Princess of Wales previous to her marriage
consists of the reception of the Sultan at Windledon in 1862, as well
as that by the Prince of Wales in Hyde Park in 1876, and the more
recent and greater event than all the others by Her Majesty at Windsor in July fast.

One of the remarkable features of Sergeant Miller's service is that
he has been present at twenty-two consecutive animal inspections.

nits. He bas also messuat at the grand reviews of Brighton, Doversion in Say. He bas also messuat at the grand reviews of Brighton, Doversion in Say. He bas also messuate at the type Park in 1870, and the more recent and greater event than all the others by Her Majesty at Windson in July Brighton and Albert Brighton of the Sulfan at Winbledon in 1862, as well as that by the Prince of Wales in Hyde Park in 1870, and the more recent and greater event than all the others by Her Majesty at Windson in July Brighton and the last been present at twenty-two consecutive annual inspections of his regiment. He was one of the earliest to gain the Government certificate of proficiency. It is, however, in the matter of shooting that Sergeant Miller has made himself eminent among Volunteers, and in 1876 he was placed on the regimental staff as Instructor in Seaw at target for the first time, having goed oown with some comrades to the Government ranges at Plumstead. Here one of his comrades to the Government ranges at Plumstead. Here one of his comrades to the Government ranges at Plumstead. Here one of his comrades to the Government ranges at Plumstead. REFORM THE FISHING FLEET.

REFORM THE FISHING FLEET.

**Ellitor Forest and Stream: A letter in the issue of March 9, by "Skipper," taken from the Cape Am Advertiser, pleased me very much. It should lead the builders and owners of fishing vessels in this country to think that they have and owners of fishing vessels in this country to think that they have met attained perfection in their models, which often prove to be but offlus for the poor fellows who are trying to make a living for themselves and their families out of the sea. I think that the best of the fishing vessels of the day, while quite fast, fairly able in a seaway, and about as fair and shipshape booking as any vessel we have had, liev are so designed that there is a waste of material to secure but indifferently the desired result. To-day, the aim of the builder of vessels for fishing in deep and open water, is to have them fast, but a limit of the stream of the builder of

vessels lest with a loren or more skillful, actics men on board of each. Taking this view of the autions am earnot help inhibiting that the designers are in a degree responsible for the lives of these fishermen. It is demonstrated daily on the English and Scotch coasts, that small vessels of very deep that and handy rig can stand almost a small vessels of very deep that and handy rig can stand almost what has been proved at home and abroad. Now voly don't our fishing firms take the hiat and copy after the English?

Because they believe their vessels to be about perfect and they something after the style of the English: a travelers, would give the style of the English trawlers, would give the even good accommodations; would have deck room enough to get about comfortably on and for storage of boats. Also have room for the crow good accommodations; would have deck room enough to get about comfortably on and for storage of boats. Also have room for the storage and the storage of the st

wholesale/trownings, the long list on 'not heard from.' Who will take the lead'

IN REYAWLS.

Editor Forest and Stream;
I have been very much interested in your description of the yawl, and can fully agree with you in all you say in pralse of the latter eight and can fully agree with you in all you say in pralse of the latter eight yawls in rig. I speak of our 'Enckeyes.' These are boats rauging from thirty to fifty, and I believe even sixty feet long, generally sharp at both ends, (though some of them are now being built with round sterns, but in this case they more nearly approach the schooner in rig, having masts of equal length. The true 'Suckeye' has a long foremast, stepped well forward, carrying a 'goose wing' or sharple sail with short bowspir and handy lib, mainmest about two-thirds the sent you a description of the sinaller variety of this craft some years ago unler the head of 'Chesapeake Canoes.' These boats oyster in all weather, being at work all winter and going whenever, and wherever the large 'pungy' schooners are able to, they are very fast for writing boats, especially in a stiff breeze. My own yacht's 38th, keel, 38th, over out of commission, being used as well as yachting. She was originally a cat, but as I have always thought that rig an abonination for anything but a summer sail in narrow waters, I rigged her a sloop, and will here state that she is as handy as that rig can be made, being quick in stays, fast under any sail, and altogether as near perfect as a sloop can be, but I begin to appreciate comfort more, and think of coning out in yawl rig for next fail and whiter's campaign. Do you deen it best to rig a boat in such a summer and a couple of Feet ahead and use a smaller single jib, especially as I want all the deek room I can get for sink box in winter. As to mizzen, by do you recommend the English lug for mizzen, lerven and the sum of the

could remedy this by putting on a large jih for summer use, which he did. Consequence: he was beaten worse than before, to my surprise as well as his. Finally, how does the yawl rig compare in speed with others?

EASTON, Md.

TYPE IN CANOES.

TYPE IN CANOES.

Etitor Forest and Streum:
In your issue for April 18 occur certain reflections upon Clyde canoes which 1, as a Clyde man, heart and soul, cannot accept. The writter is not familiar with our canoes when he can't tene whileboats. The Thame's man can settle his own accounts as he pleases, while I content is not familiar with our canoes when he can't tene whileboats. The Thame's man can settle his own accounts as he pleases, while I content is not familiar with our canoes when he can't tene whileboats. The Thame's man can settle his own accounts as he pleases, while I content is not have of the Rules and Regulations of the Clyde Canoe Club is for the season of 1881 (has year), and therein is contained the foliowing list of dimensions, under head or classification, and as all the C. C. canoes are "cruising" craft, I shall not mention those belonging to the "sailing" class, as there is only one up to its extreme dimensions. Cruising canoes, maximum, 176.6 in.X32in. X16in.; minimum breadth, 37in.X8in. tepth. Now, the general dimensions of Clyde canoes do not exceed 154, 6in.X32in.X38in. tems. also be remembered that the C. C. C. do not cruise down little one-horse crecks may be caused that the C. C. C. do not cruise down little one-horse crecks use anything so tame. for the open waters of the Frith afford more use anything so tame. for the open waters of the Frith afford more true canoe sailing and paddling tion any other esturary or firth in the British Islos. Of course there are canoes and canoes, and in every club there is sure to be at least one abortion, and the C. C. C. is no exception as regards one.

Then again, as to portability, allow me to inform you that in the month of July, 1873, during a cruise from Stornoway, Western Hebrities, to the Clyde, a rough-and-tumble portage of two miles over the rough, story Lewis flountains was made, as follows: Canoes were the rough, story Lewis flountains was made, as follows: Canoes were the country of the course when the course were a few substantials w

AN INLAND CRUISER.

Editor Forest and Stream:

Editor Forest and Stream:

In the ship is finished, and if the atmosphere ever admits of a thuy. I intend to local her on the classic Susquehamsa, not very far from the stream of the classic Susquehamsa, not very far from the classic susquehamsa, not very far from the classic stream is a stream in the stream is a stream in the stream is a stream in the stream is as crooked as the Greek verb. There are large islands, and, as a matter of course, not only narrow channels but shoal water just above the islands, resulting from wave action during high winds. There are also many shallow coves and little inlets where one of the gamilest fish that swins can be captured with nook and line; and as it is a part of her insist not of drops a line" now and then—not only to Forest and stream in the intended of the stream is a stream in the stream is a stream in the stream is a stream in the stream is a part of her insist not of drops a line" now and then—not only to Forest and Stream and the stream is the water as possible. Nevertheless she is a keel boat. Why: Because your centreboard is always getting jammed, or dammed, either "in the box" or into the sand. That is to say, the keel boat can be built to draw less water safely than any other type, because the requisite stability may be obtained by greater length and less ballast than in any other model. That fact is important, as my own experience, herefofore detailed in your columns, has demonstrated. Many designers lose sight of it, however, and seek to compensate for experience, herefofore detailed in your columns, has demonstrated. Many designers lose sight of it, however, and seek to compensate for specific control of the control o

igainst a nipping current, and suc towns are manufacture, purpose for the work. Altogether, she is not a bad piece of furniture.

Her keel is of chestnut, 15ft. long, rockered, 2in, wide on top, shaved away thin on the bottom, and sin. below garboard-strakes and shall be a good back-bone for so small a boat. The garboard strakes are good back-bone for so small a boat. The garboard strakes are in wide and Jsin. thick, Above these is clinker-built of bard, white-purpose sliding. Over the forward deck she has a 35in. bulwark, so that a line may be coiled on deck and left there without any danger of its sliding overboard if she heels in a breeze.

Her water line length is 17ft. exactly. The decks each side of combing are 3in. higher than forward deck, surmounted by a half ogenesumt rail, backed on the inside with concave black wainut modern. The shades of war fight to the deck, except about eighteen inches man, and the shades of t

covered with brussels. Length on deck forward, 7ft, 3in, dikto fif, 3ft, 4in; dength over all, 17ft 3in. The storm is semi-diplical, and the culwater, an overhonging inboard curve. Extreme beam, 4ft.; beam on water line, 3ft, 6in, extreme draught, 7fn, Sterrs with a yoke under after hatch, yoke-ropes passing fibrough the back-rest of after seat. She will accommodate five persons very comfortably, and slows two hundred pounds of from, part of it a spare anchor, besides one hundred pounds of from, part of it a spare anchor, besides one hundred pounds of from, part of it a spare anchor, besides one hundred pounds of each, all except the nachor between ribs and slows two hundred pounds of itom, part of it a spare anchor, besides one hundred pounds of lead, all except the nachor between ribs and you have the extreme outside depth. Her bowspirit steves under the deck, and is 5ft, 9in outboard. Mast, beet to cap, 15ft. 8in; diameter at deck, 4in; at cap, 2in; gaff, 9t; 2in, diameter; boom, 15ft, 3in; at diameter, 3 in; yard, 9ft; diameter, 3 in; yard, 9ft; diameter, 3 in; yard, 9ft; diameter, 3 in; jard, 9ft; and 4ft on the foot. Jib, 17ft, by 7ft; jib-topsail, 15ft, by 7ft; gaff, 9ft; part, 4ft, 16ft, 16f

BINGHAMTON, N. Y.

NEW YORK YACHT CLUB.

NEW YORK YACHT CLUB.

Several modifications and additions to the by-laws and sailing the club until launched and measured, over 15 toos and a decked vessel, reasonable cockpit excepted. The measurer may, to save time, over 15 toos and a decked vessel, reasonable cockpit excepted. The measurer may, to save time, over 15 toos and a decked vessel, reasonable cockpit excepted. The measurer may, to save time, over 15 toos and a decked vessel, reasonable cockpit excepted. The measurer may, to save time, over 15 toos and the control of the pennant and flag officers swallow-tails to be half an inch for each foot of height of ruck from sea level. Whith, equal two-thirds the length. Each yacht may also thy a blue pennant, three-quarters of an inch in length for whith. Instead of simplifying colors so that they may be understood by the general public fits new pennant servers to emplished matters been unde, so that being still swallow tails, in place of rectangular ent, they will continue to be confounded with flag officers' broad pennants. If the navy is to furnish the standard in etiquette and properly, private signals should be rectangular. In that case the shape itself would at once indicate the meaning of the flag. We trust this plan will soon be adopted. To professional eyes a private swallow disserved to the same property of the child and retained in its possession, and no person other than a United States navil instructor shall be permitted to copy it, except he shall have brained virtues authority from the secretary of the child and retained in its possession, and no person other than a United States navil instructor shall be permitted to copy it, except he shall have brained virtues authority from the secretary of the child and retained virtues authority from the secretary of the child and brained virtues authority from the secretary of the child and to take the form of the child of one inch to the foot for all yachts of eighty feet water line and over, and of one-half of one inch to the foot for all yachts of th

model in the possession of the club at the time of the passage of this by-law,"

And in the subjoined clause insisting upon the deposit of the lines of winning yachts with the club, the good example of a younger organization has been acknowledged:
"A complete draught of the lines of each yacht winning a prize in a club race shall be deposited with and become the property of the club, under the same restriction as it removal, etc., as apply in the case of probability of the property of the club, and the property of the prop

dimensions of spars, erea of sails, number of tons and kind of ballist, of the sailing rules, which were sailly behind the day and incomplete, the sailing rules, which were sailly behind the day and incomplete, the sail amplied in some respects, the Y. R. A rules of Great Britatu serving as the standard. The measurement rule will be the sail of the sai

inty. 16 o'd how has been abolished but morest back braid steps in to alre his place, Now, this whole business of rank in clothes is thoroughly childish and idle.

In the first place, no one ever appears in full regulation uniform and a stovepipe hat, with "five stripes of heavy black silk braid" on the sleeve, or the same beautifully braided garment, with fashionable civilian trousers of gorgeous bic, is such an incongruity that it bodges upon the reductions, and reminds one too forebly of "Genoral ders upon the reductions, and reminds one too forebly of "Genoral ders upon the reductions, and reminds one too forebly of "Genoral soul outside the club would know the difference or care a rush for two, throe, four or five stripes of "Heavy black silk braid," It carries nothing with it—no more respect, not so much as a plain blue pealeach with club buttons. Shoulder-straps, stripes, osurch-feathers, and the like, are well enough for guys ashore, but ought no longer to have a place among sallors, and far be it from us to insinnate that existing gold have was a step in the right direction. Now follow up the beginning until mothing but a cap with simple club device, blue trousers, and a pea-jacket, light or neavy, with rubbor club buttons, is left on the statutes, and face the "fancy fairs" will have been licked into ship-shape condition, and the quarter-deck will have graduated from a minic cross between the navy and the Bungtown Milita into full-bledged selfs, in appearance at least, which is more than even of all kinds may be, play-soldiering reaches the bulground intil into full-bledged selfs, in appearance at least, which is more than even of all kinds may be, play-soldiering reaches the bulground intilities in dening a series of the proper of the reduction of the proper of all kinds and be properly the properly of the new purchase, such early and the Bungtown Milita into full-bledged selfs, in appearance at least, which is more than even of all kinds and be a properly one properly one, play and the Bungtown Mili

AN EXPERIMENT WORTH MAKING.

AN EXPERIMENT WORTH MAKING.

Billior Forest and Stream:

If your exuberant expressions over the supposed conversion of the "gallant Commodore of the Now Jersey Eacht Club" afford you annusement, it would be selfish in me to protest. I have no objection, providing you allow me to answer in my own way. It is not true that have per lead on the bottom of the Derro Devil. That would subject me to rather more ridicule than I care for.

I have pull an oak centre of the total property of the self-off of the bottom of this are three hundred and twenty-five pounds of lead. On the wind this will be seven feet below the keel, and nine feet below the wind this will be seven feet below the keel, and nine feet below the wind this will be seven feet below the keel, and nine feet below the wind this will be seven feet below the keel, and nine feet below the wind this will be seven feet below the keel, and nine feet below the seven have the prosumest of the brown of the property of the public, but more particularly for the instruction of yeachtsmen, and the writer in your contemporary certainly fails altogether. The Dare Devil is the deepest draft race boat of her class in the waters around New York, and with all due deference to the opinion of other, length, 24ft, 4in., and I have never seen her beaten "dead to wind ward."

[The Dare Devil is well known as the ablest and one of the smallest of the class about New York or in any waters, and the experiment of

loading the centerboard to lighten up on other ballast and bring the boat "out" a little more is one well worth making. Our first impres-sion that lead was to be placed on the boat's bottom was due to the reports current which, however, had no foundation in fact.

KINKS IN YAWLS.

KINKS IN YAWLS.

Editor Forest and Stream:

In reading over Mr. Rice's very interesting account of his experience with the White Cap, I see ho proposed or ign his interestment with full rigged topmast, in order to carry a mizzon topastl. This is my idea, and was our of the reader of asks of proposed. This is my idea, and was our of the reader of asks of the rithd. I think Mr. Rice of the maintapmast. It will be directly in the way of a club topsail, and being the only stay counceting the two masts. The mizzontopmast will be very much apruag forward by the strain of the headsail, and being the only stay counceting the two masts. The mizzontopmast will be very much apruag forward by the strain of the headsail, on the manumast here being no springstay, as on a schooner, to throw this strain on both masts. My idea for mizzentopmast stay is to have a fore and aft spreader, extended from mizzenmast at the hounds, then pass the stay through an aye in end of this spreader and down to deck at fout of mizzensmast, or stay could be divided at spreader, carrying each part back to the mizzenstrout plates. I shall also carry in my yacht what might be called a mizzentopmast staysail. That is a light sail, set flying, from head of mizzentopmast staysail. That is a light sail, set flying, from head of mizzentopmast at given a short distauce at for manimuss. I flink this would make an effective light sail for beam to quarter-winds. EASTON, Md.

"THE SHERIFF'S."—Yacht owners, especially those affecting small craft, moored along the Staten Island shore, will be glad to learn that Mr. Denyse, ex-Sheriff of Richmend coearly, has greatly improved his sung little hostelry near the fomphinsville landing. He has me to be a considered by the following the landing of the little cover sheltered by the piled new appointments throughout. A float will soon be added to read the access to hoats, and an experience, trustworthy hand will be around" when wanted to take charge of yawis from the yachts over night, and to keep a weather eye on the little figers at their moorings, give more scope in a blow, pump the bilge or lose sails to dry as required. If the Sheriff does not make presence to the "palatial" in his establishment, he can at all ovents be relied upon for a visions for the yacht, and besides will firm it of some, because in such as to tides and who is not be presented to the problem of hidden obstructions and be pleased to attend with dispatch to all commissions in his line at moderate charge. As some such establishment has long been needed by those obliged to leave their ynchis for daily business in the city, we bespeak for the Sheriff the patronage of obligations accepted will insure safety to one a yachts and roady attention to the many Hills wants and supplies the small boot owner region of the problem of the patronage of obligations accepted will insure safety to one a yachts and roady attention to the many Hills wants and supplies the small boot owner regions of the patronage of the patronage of obligations accepted will insure safety to one a yachts and roady attention to the many Hills wants and supplies the small boot owner regions of the patronage of the patronage of obligations accepted will insure safety to one a yachts and roady attention to the many Hills wants and supplies the small boot despited to the patronage of obligations accepted will insure safety to one a yachts an

dinice to complete his indipness. Of Delyes personally with often pound politic and agreeable, and this assistants the right men in the Hard Control of the
EARLY BIRDS.—The great majority of the fleet is still high and dry an the beach with little or no signs of soon being afloat. A few, however, who appreciate a good fresh crisp April breeze have taken advantage of the glorious salling weather we have had the past two weeks. Gael, Mr. Hopkins, S. C. Y. C., is in commission with a side like a mirror and as trim on deek, and complete down below as the most fastidious could wish. She has been East for a cruise, and reports many flow runs made in weather which gives zeek and does not ports may flow runs and in weather which gives zeek and loses not consistent shall. She looks what she is, a flow little still remain a look of the commission, and has taken up morthigs off the Seavanian along the commission, and has taken up morthigs off the Seavanian along the commission, and has taken up recording to the same that the continuation, and has been taking trial turns before leaving for the southward. Yawi Caprice, Mr. David Williams, A. Y. C., has also been cruising. Mr. Whiskow & Kelpie, shipped her crew has week, and hauled out the S. C. Y. C. basin Sunday last. One by one the fleet afloat is being augmented, yet the majority are waiting till warm weather is upon us, only to loose a fortnight's sport, all for the fault of taking time by the forcelock.

only to loose a fortnight's sport, all for the fault of taking time by the forelock.

WHY NOT.—We hear of several gentlemen owning small yachts not over 20tt, who propose living on their craft throughout the season. This is an excellent plan which we hope to see more generally followed. Health, hardy constitution, bright mind and a general resurrection are the natural consequences of leaving ashore all worry and business cares every evening the instant yon step aboard your ship. Be she ever so small, the invigorating effects of pure sea air, could nights, excretise and refreshing variety for the mind are there just the same in the finy two-tonner as aboard the "palutial" schooner of 300 tons. Even more, for stewards do not arise to plague yon, crews there are a given of the context asks and become part and pured of the whole.

NARRAGANSETT YACHT CLUB.—Under the auspices of exGovernor Lippitt, of Rhode Island, a new yacht club is organizing with Newport as its station. A charter has been obtained recently, Colors adopted as follows: Club burge, pointed, width equal twothirds the length, blue field with red anchor in center. Commodore, while field with white anchor. Rear commodore, while field with blue anchor.

NEW BEDFORD YACHT CLUB.—The secretary writes us that

NEW BEDFORD YACHT CLUB.—The secretary writes us that there is at present only one open boat in the club, and that a recent reference in these columns to such boats in the club does not apply The N. B. Y. C. is to be congratulated upon its rapid growth in the unmbor as well as the tonnage of its fleet, which now takes rank with the first in the country.

MADGE.—The Secretary of the Treasury has decided that this 10-ton cutter must pay duty as imported wood manufacturers if she

changes hands. It is possible that her owner will present the cutter to the New York X. C. But what a fine market for cheap wholesome yachts a Well buik, well furnished cruising yachts of four-hab bought abroad for half the cost of building he

to pongar aurosa for fact the cost of remaining nero.

WHAT IT PROVES—A cultier was advertised for sale once in the olumns, her owner having bought a larger boat. Two days latter to utter had been sold, and was transferred to her new owner, whi rereses that the right kind of property can be sold quicker throug foreser axes Stream than through any other journal, and that the chand for cuttiers does not let such craft lay round looking for water very long.

wher very long.

ANOTHER,—Schooner Albatross, Vice-Commodore Humphreys,
C. Y. C., is to have her main boom shortoned, and gaff lengthened
foretopmist has likewise been cut down, the truck showing some office,
ss alboy the water than the main, English institue, and a most sen-

VIVID.—This sloop has become the property of M. W. W. Tomp-kins, Seawanhaka Corinthian, Y. C. She has been lengthened 5ft., and the big jib has been left ashore, a forestay having been set up.

LEATHEA.—This schooner has been bought by Mr. T. Parker, of Boston, and is now in the hands of Joshua Brown, of Salem, receiving a keel in place of centerboard, so as to be up with the times.

VISION.—This large sloop is to have a modern mainsail. Hoist reaced 5ft., and gaff lengthened.

A STORY OF THE COACHING DAYS.

THE sketch of "Two Cold Days at the Club House," in a late number, where the writer describes the dresses of the parties, reminds me of one of my youthful adventures. I think it was in January, 1824, that I crossed the British Channel in one of the then government steam packets to Weymouth. Arriving too late for the London coach, eight of us agreed to take that to Southampton, which would give us the chance of reaching London early the following morning by mail or night coach. This would be better than remaining at Weymouth waiting for the next coach, which ran only tri-weekly.

us the chance of reaching London early the following morning by mail or night coach. This would be better than remaining at Weymouth waiting for the next coach, which ran only tri-weekly.

When we mustered at the coach office a more motly group I have rarely seen. Russian winter coats and caps, Spanish cloaks, Italian capotes and book, long, red sashes, etc., etc., all combined, reminded me of a band of Italian brigands, Incendiary fires had been prevalent for some time in the county of Dorset, one half of which we had to cross, and such was the excitement, by the burning of so many farm houses, corn and hay ricks, otc., that all tramps and suspicious persons were sure to be brought before a magistrate. Several coaches having been robbed, we all agreed that we were a suspicious looking set, and when I mentioned brigands, my fellow travelers dubbed me chief. Occupying the box seal I was, as a matter of course, the most conspicuous. After the first stage we passed, the smoking ruins of a farm house, and I perceived that the people collected there eyed us very suspiciously, there remarks leading me to think we might be stopped at the first village. I expressed my fears to my friend, the coachman, who stated that he did not like to mention it, but he felt certain we should be stopped at the next village, Wareham, I believe. Our prospects were rather gloomy. To be surrounded by a mob of stalwart sons of toil, dragged before a magistrate, perhaps roughly handled, and be baulked in our plan of starting for London that evening, might be a very interesting adventure for romantic youths, but did not suit my practical ideas. I therefore set my brain to work to devise some scheme by which to checkmate the Dorsetshire rustics. "I have it!" I exclaimed. "Have what, sir!" said the coachman. "A door of escape from our difficulty."

At that period the stage coach was the universal trayeters med of convexance throughout the United Kingdom. The

Yard is the ponce meanquants of your distribution of the driver. "That is really a good idea, and I have no doubt it will enable us to get through without any difficulty."

At that period the stage coach was the universal travelers' mede of conveyance throughout the United Kingdom. The guard, who was a necessary appendage of the four-horse coach, always blew his horn as you approached any town, village or stage where a change of horses took place, and the well-known sound during the day always brought all idlers to the windows and doors, and a few always assembled around the coach office, more especially at this period, when all were anxious to learn the news whether any more farms or stacks had been burnt, any incendiaries captured, etc. Accordingly, as we entered the village, all eyes were turned toward the coach, many men and boys running after us, so that when we pulled up at the office a good crowd was collected and the queer appearance of our party was being freely discussed. I overheard the following colloquy between a fine old specimen of a John Bull and our driver. "I say, mister, what he them queer looking chaps you're bringing along?" "Tut, man," said the knight of the whip, "them's some picked London policemen sent down to ferret out them rascals what's destroying the country?" "Whie, mon," oxelaimed John, "but that's grand! Blow me tight, boys, claimed John, "but that's grand! Blow me tight, boys, turning to the crowd) if them's not wide nawke gemman, then I never seed any!"

Priend coachman hurried up, and I can assure the reader I was delighted to hund him the reins and see the coach well started.

Pinner March 21, 1882.

INTERGESTING INTELLIGENCE,—Young Wolfe, the New Jersey lover, whose passion for Miss Jacobus was of such an ardent nature that he fired a charge of buck shot into her, is now languishing in the Paterson jail. It is reported that the pending civil suit against Wolfe will probably be withdrawn, inasmuch as the couple are likely to marry. If they do, we advise Miss Jacobus, before the marriage, to make her lover sign a total abstinence pledge against the use of buck shot in any form.

CLIFTON, a village near Cincinnati, O., boasts a big crow-roost, where thousands of birds congregate nightly,

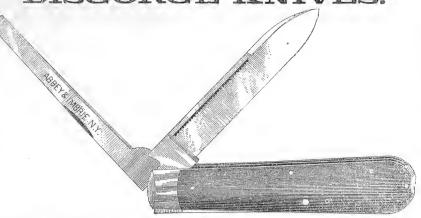

PUBLISHER'S DEPARTMENT.

PUBLISHER'S DEPARTMENT.

WE NOTICED, the other day, in the window of E. S. Harris's gunstore, at 177 Broadway, a mammoth leather collar, and on inquiry learned that it was made for the celebrated elephant Jumbo, by the Medford Fancy Goods Co., 90 Duane street. It was found impossible for Jumbo to wear it, as his head is smaller than his neck, and if would therefore slip off and annoy him. To give some idea of the immense size of this collar we will state that it is nine feet long, nearly one foot wide, and required three sides of Jeather in its manufacture. It is probably the largest leather collar ever made and is quite a curiosity,

Smokers' Match Box.

WM. H. WALKER & CO...

(Patented Feb. 14, 18

THE SMOKERS' COMFORT, THE SPORTSMAN'S DELIGHT, AND EVERYBODY'S MATCH BOX.

Simple in Construction.

This box is made with a struck up hinge without any solder; the division between the match and fuse compartment acts as a brace, making the box so strong and durable that it will last a lifetime: weighs less than two ounces; convenient to carry in any pocket; there is nothing in the market like it. Cannot get out of order; it is always ready.

You can always get a light in the wind or in the You can always get a light in the wind or in the dark. The fuse can be obtained at any segar store, The boxes made are of two qualities; German Silver, price 75cts. Brass and Nickel, 50cts. Both sent by mail, postage free, on receipt of price. A liberal discount to the trade. Sent by express C. O. D. Agents wanted in all the large cities and towns. For sale in all the segar stores, news depots, &c. Address

The Parker Gun.

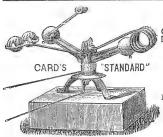

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARERER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

FOREST AND STREAM FABLES.

II,-THE PEWEE AND THE ROBIN.

NE June morning, a Pewee Flycatcher was sitting on his favorite perch, the topmost twig of a dry tree surrounded by many green ones, in which swarmed countless winged in-sects. He was taking his breakfast, and at the same time enjoying the very finest of sport. If a gilded fly came within range of his sharp eyes, he was snapped up by him in such an artistic manner that it seemed as if it must be almost delightful to the victim. The Pewee would regard him for the fraction of an instant; and getting his direction, launch forth on a sudden flight, at the speedy end of which there was one less insect in that portion of the world lying outside the Pewee's craw. It was a pretty sight to see him at his airy sport, rarely missing moth or fly or little beetle—the blundering June

ly missing motto or thy or little beetle—the blundering June bug he deigned not to pursue—and he well knew that he was acquitting himself most creditably.

Happening to cast his glances toward the earth, he saw hopping there a Robin, and watching his motions a little, presently saw him draw an earth-worm from among the grass-roots, and then another and another; while unheeded just over his head, fluttered a lusty miller, inviting capture, as it seemed to the Pavae. seemed to the Pewee.

"Ho! neighbor Robin," he cried, "why dost thou not come up here among the branches, and have some sport worthy of a bird, instead of grubbing the earth in such clodhopper fashion; or at least make a flight for that fat miller, which I see inviting thee from above, almost within hopping distance?"
"Nay," said the Robin, "I should get only hunger and more of thy scoffs than now, if I were to attempt to get a break-

of thy scoils than now, it I were to accempt to get a dream-fast out of the air. Every bird to his gifts. I find sport which satisfies me in taking these fellows, for I assure thee, they give me some lusty tugging. And," he added, as he swal-lowed an angle-worm half as big as his own neck, "they are very fat, and toothsome, and wholesome withal."

MORAL.

Though thou fishest only for Trout and Salmon, despise not thy humble brother of the angle who findeth pleasure in taking even so mean a fish as the Bullhead,

SPRING WILDFOWL SHOOTING.

By reference to our game columns it will be learned that the Canadian clubs are making a most commendable effort to prohibit the spring shooting of wildfowl. There can be no question that this is a wise course. The wildfowl should be protected just as other birds are; the same com mon sense principles applying to other game apply with equal force to ducks and geese. No game should be killed in its breeding season, nor just as it is repairing to its nesting grounds. To shoot ducks which have mated is simple folly, pure and unmitigated. Spring shooting is inconsiderate and improvident.

It is gratifying to know that there has been a great change of sentiment on this subject, that men are coming to see the unwisdom of spring shooting, and that the change in public sentiment is likely to be followed by a change in

The good results which would be sure to follow a general cessation of spring wildfowl shooting are admitted by almost all men who are familiar with the habits of the birds, and who have had any extended experience on the various shooting grounds of the country. Nine of every ten of the older sportsmen are agreed that spring shooting is wrong; indeed, we have yet to find one who will contend to the contrary. Nevertheless, these same men, or a majority of them at least, go out every spring and kill all the birds they can. Their practice belies their principles; but this is only another of the multitudinous exhibitions of that trait of human nature which prompts a man to "go in" for what he can get now, regardless of the rights of others who are to come after him, and indeed of his own future advantage.

This question of spring shooting or no spring shooting is one which should receive careful and honest consideration by individuals, game clubs and State associations.

A MATTER OF SENTIMENT.

IT appears that quail are very plentiful in the vicinity of Monroe, North Carolina. They are there caught in traps, aken into town and sold, their necks wrung, and the birds served up on the table. We are in receipt of a letter from Monroe, in which the writer, after stating these facts, asks why it is not perfectly proper for him to buy these birds and trap-shoot them. "To buy the quail," he says, "which the epicure would otherwise have bought, and to give them a chance to escape from the trap, is, I think, much more commendable than to pull off their heads in some back yard. The only difference that I can see is that I love sport, and so trap-shoot them; the epicure cares only to gratify his appe-Our correspondent appears to be perfectly sincere. and he asks us to pass on the question of ethics involved in his statement of the case.

Life is short; and we are disposed to believe that in the three score years and ten allotted to the race, there is not much time to be spent in discussing the merits and demerits of the trap-shooting of quail. In this case, we conceive, it is a matter of sentiment. If our friend lacks the innate feeling which should forbid him to trap-shoot "Bob White" no amount of coldest logic or most impassioned argument could instil it into his heart. We shall not attempt the fruit-

THE LONDON FISHERY EXHIBITION.

T is now certain that the Prince of Wales and those managing the International Fisheries Exhibition, to be held in London in 1883, have begun to make an effort to have the United States represented at it. England did not make a creditable display at the German Exhibition, because the government took no part in it, but no one doubts that the immense fishery resources of Great Britain would, if properly represented, make a display, that would be difficult to excel, Germany made a fine display, and the fishery interests of that country are small in comparison to those of England.

These exhibitions are productive of great good to all nations taking part in them. The participants not only see and learn methods of capture, implements, culture, curing, and preservation, and gather information on the building and rigging of boats, life-saving appliances, and the thousand things that are intimately connected with fish, fishing, and fishermen, but they also serve to open a market for fishery products, salted, dried, smoked, preserved in oil or by other modes, canned, etc.

Mr. Lowell, the American Minister, has transmitted a formal invitation to our government to take part in the exhibition, and the Secretary of State has laid it before Professor Baird, U. S. Fish Commissioner, who has prepared a letter of acceptance, provided that Congress shall order such action and make an appropriation of \$50,000 to defray the necessary expenses attendant upon a full and fair presentation of the subject in models, specimens, and the apparatus which are employed in our various fishing enterprises.

dent will soon lay the matter before Congress.

Should Congress approve this, the display would no doubt be much more complete and exhaustive than that made by our country at Berlin, where but six weeks elapsed between the passing of the appropriation and the shipment of the exhibit. Also, the experience gained by Professor Goode at Berlin would enable him to know exactly how to arrange and display his collection in the best possible manner, and would greatly facilitate the better presentation of the progress made in the mechanical methods of our fishing industries and the preparation of their food products during the last decade.

MR. PAGE AND THE FISH COMMISSION, -In our biography of Mr. George Shepard Page, President of the American Fishcultural Association, in our issue of April 13, we stated that he was made chairman of a committee to present a memorial to Congress asking for an appropriation to erect a salmon hatchery on the Pacific coast, etc., and that he asked for an appropriation of \$10,000 and received \$15,000, and that Professor Baird was then made Fish Commissioner. wrote this hurriedly, without consulting the records, as the above statement seems to have been the prevalent impression. On looking over the records we find that what we said is only true in part. He did introduce the resolution, which did not pass. Prof. Baird, who was appointed Com-missioner Feb. 25, 1871 (not 1872, as we stated), afterward induced the Appropriation Committee to make the first appropriation of \$15,000. The Fish Commission was not created for the purpose of fishculture, but to investigate the condition of the fisheries, especially the marine fisheries. We make this correction in order not to mislead future historians, as the value of such things lies entirely in their cor-

THE TILE FISH AND ITS MOUTH.-In our first article on the dead fish which were so plentiful in the ocean, we made a curious and absurd mistake concerning the tile fish. We spoke of it as "a flat fish whose mouth is too small to admit the hook, and which was first brought to light by the dredges of the U.S. Fish Commission." We had in mind at the time a totally different fish. The tile fish, although a bottom fish, is not flat, and its mouth is quite large.

WE WERE ONCE ABUSED by the editor of a daily paper for printing in a winter number of the Forest and Stream a sketch of summer sport. Our critic, it is needless to say, was not a sportsman, and so could not appreciate the pleasure of living over again in memory the shooting expeditions of other days. This hint is given to prevent any captious criticisms of the publication in to-day's paper of an October shooting sketch.__

FROM THE BENCH TO THE BOARDS.—The St. Bernard dog Bayard, Jr., exhibited at the late New York bench show by Mr. A. W. Pope of Boston, has been sold to J. K. Emmet, the actor, the price paid, we understand, being \$2,500. Mr. Emmet ("Fritz") will train the dog for the stage.

THE TEXT of the Montana Game law is given on another page. As we have already announced, a game league is now forming which will make a vigorous effort to render the pro-visions of the new law effective. There is urgent need of like action in adjoining Territories.

THE BLACK BASS FOR SCOTLAND. -Mr. George Shepard Page sends us a cablegram announcing his arrival with the live black bass which were sent by Mr. E. G. Blackford, and are to be presented to the Duke of Sutherland at the close of the Edinburgh Fisheries Exhibition.

THAT CANNERY.—The proposed North Carolina wildfowl cannery will not be established. Our New Haven contemporary, the Packers' World, announces a determination to oppose it. That settles it.

"Doggy."-This word is used quite commonly in England; and we have observed a tendency to adopt it in this country. It has absolutely nothing to recommend it. The plain word "dog" answers every purpose, and is a much better word in

"GROUND HOG DAY."—Some of our friends down in Hill's Hole, on the Sheep Horn, want to know when Ground Hog Day is? We find a difference of opinion; and have decided to take testimony. Who can tell?

The Sportsman Tourist.

"Nature never hurries; atom by atom, little by little, she achieves her work. The lesson one learns in fishing, yachting, hunting or planting is the manner of nature. Patience, with the delay of wind and sun, delays of the seasons, bad weather, excess or lack of water; patience, with the slowness of our feet, with the parsimony of our strength, with the largeness of sea and land, we must traverse."

"The moral influence of nature upon every individual is that amount of truth which it illustrates to him. Who can estimate this? Who can guess how much firmness the seabeaten rock has taught the fisherman? How much tranquillity has been reflected to man from the azure sky, over whose unspotted deeps the winds forever more drive flocks of stormy clouds and leave no wrinkle or stain? How much industry and providence and affliction we have caught from the pantomime of the brutes."

"The book of Nature is the book of Fate. She turns the gigantic pages—leaf after leaf—never returning one. One leaf she lays down, a floor of granite; then a thousand ages, and a bed of slate; a thousand ages, and a measure of coal; a thousand ages, and a layer of marl and mud: vegetable forms appear: her first misshapen animals, zoophyte, triloblum, fish; then, saurians—rude forms, in which she has only blocked her future statue, concealing under these unwieldly monsters the fine type of her coming king. The face of the planet cools and dries, the races meliorate, and man is born. But when a race has lived its term, it comes no more again." RALPH WALDO EMERSON.

WILD HOGS IN OHIO.

"MANY YEARS AGO."

THE "Hinckley Hunt" calls to mind many kindred memories. As has already been short in the THE "Hinckley Hunt" calls to mind many kindred memories, As has already been shown in the columns of the Forest and Stream, the early settlers of the "Western Reserve" found those primitive forests abounding in wild game in great variety. The game was not always so wild either. An aunt in whose faumly I lived over forty years ago, in Ashtabula county, often entertained us with accounts of the prevalence of game upon their premises. Turkeys were as common around their buildings as if they had been domesticated. They would sit upon the fence within fifty feet of the house, and when she "shook the table-spread" after meals the turkeys would jump down from the fence and come to the very door to pick up the crumbs, etc. If the barn door was left open in the winter-time, flocks of these would enter the barn to feed upon the unthrashed grain, upon screenings, etc. In this way they were from time to time secured for table use, for no gun was kept by the family. Deer were frequently seen feeding at the hay or grain stacks in winter. These stacks were generally adjoining the barnyard.

The late lamented President was no better known on the "Reservo" than was his immediate congressional predecessor,

These stacks were generally adjoining the barnyard. The late lamented President was no better known on the "Reserve" than was his immediate congressional predecessor, the Hon. J. R. Gidings, who, together with another famous man, U. S. Senator Benjamin F. Wade, were both residents of this county, and of the same village, viz., Jefferson. Both of these great political leaders settled in that region when it was a wilderness. Both were expert rifle-shots and successful hunters, and I have heard both relate similar facts concerning the prevalence of game around the buildings of the early settlers. I was once visiting at the residence of Mr. Gidings, just at the commencement of the war. When the conversation turned to this subject, Mr. Gidings called me to his front door and, pointing to a small cottage some fifty yards away, remarked that in the early days of the settlement they stacked hay there, and that one winter morning as he opened the door where we then stood he saw a fine deer feeding at the stack. His loaded rifle hung over the door. Stepping one foot back he took down the rifle and shot the deer dead in its tracks.

Wolves were exceedingly numerous and a source of an-

as ne opened the door where we then stood he saw a fine deer feeding at the stack. His loaded ritle hung over the door. Stepping one foot back he took down the ritle and shot the deer dead in its tracks.

Wolves were exceedingly numerous and a source of annoyance to the settlers, who found it necessary to keep a few sheep for domestic purposes. It was not even safe to yard them for the night between the farm buildings, so bold were the wolves, but they had to be kept in covered inclosures. Bears were sufficiently abundant to cause considerable trouble and some loss by raiding upon pig pens, etc.

In those days the settlers allowed all except their finer breeding stock of hogs to run at large. They were earnarked and the marks recorded by the county clerks. All the hogs of a neighborhood would herd together in the forest. Those herds were sometimes stampeded by bears, and in some instances portions of a herd would be driven so far from the settlements that they were nover recovered by their owners. The bears were thinned out the hogs increased, and in a few years the forests swarmed with them, devoid of earmarks, and of course, without ownership.

Within fifty years past it was a common occurrence for neighborhoods to obtain their pork in the following manner: The time selected would be late in the season, when the hogs had derived the maximum benefit from their forage of acorns, beechnuts and other mast. Some morning after a light fall of snow, a few neighbors would assemble, and bring one or two ox teams, with large sleds containing some hay for the oxen and straw for litter, etc., a rife or two, butcher-knives for each man and always a few dogs, ample cold lunch, and finally a gallon of liquid that would not freeze and burst the jug. Thus equipped they would penetrate the virgin forest, which would generally be sufficiently open to admit the passage of ox teams in any direction. The dogs would soon encounter a drove of hogs, which would inmediately form a compact circle, the pigs in the center, the sown next,

In later years, when the forests became reduced and the hogs less wild, the settlers could readily drive them into fields near their buildings, shoot one at a time, load it upon a sled and take it to the scalding tub. Finally, as the population increased, the forests became more and more restricted and the farmers began to have a surplus of corn. Hunters would shoot the wild boars, that is, the old alligator variety, generally letting them lie in the forest. The improved breeds of hogs brought in by the settlers, mixed with the wild ones, gradually became domesticated so that selections could be made, which were penned up at a proper time and fattened on corn. As grain production increased in some localities large whisky distilleries were established and the wild hogs gradually disappeared in their slop-pens.

Thirty-seven years ago I was living in Medina county. There were no distilleries in that region, and wild hogs were still abundant there, though they were not very wild, for the forests were only long, narrow belts between the main traveled roads. About this time the first hog-drover appeared in that region. He bought by the lump, gross weight, everything of fifty pounds and upward at about 14 cents per pound. Several worthless chaps at the different township centers, who never owned a pig in their lives, sold this drover hogs, sometimes us high as twenty-five or thirty in number. They had gathered them from the forests, and some of them thus raised whisky money enough to enjoy a solitary drunk of several weeks' duration. Two or three drovers cleared out the last of the "wild hogs."

I well recollect a wild-hog episode which occurred about those days. The first snow of the season had fallen during the day and night to the depth of six or seven inches. The answer of the season had fallen during the day and night to the depth of six or seven inches. The react morning was a favorable time for a turkey-hunt, and I started out in good season for a forest a mile away, where I generally succeeded in bagging a tu

their upturned roots were not more than twelve or fifteen feet apart. It was at least thirty feet from these roots to the tirst limb of the trees. This long, wedge-shaped space made a splendid hiding-place, which I had before occupied, and where I had called turkeys within range of my rifle. To this favorite spot I directed my steps. Arriving by the side of one of the trunks, the top of which was about four feet from the ground, I looked over and was surprised to see that the snow was fully two feet high, while outside it was but six or seven inches. Right where the snow was the highest was my old hiding-place. I saw no other way but to jump in and tramp down the snow preparatory to tying a white handkerchief over my cap so that it would look as snow-capped as the other surroundings, and then pipe my "turkey-bone." Clambering upon the tree, I at once jumped down into the light snow. I have several times during my life been in positions where instant death stared me in the face, but never before nor since that jump have I been thoroughly frightened. My feet seemed to strike some elastic substance which spread them apart, and in an instant I found myself suddenly rising in the world, enveloped in a cloud of dry leaves and light snow, out from which came such an infernal, explosive roor as can only enanate from a wild boar. (Your paragraphic correspondents are informed that this is not from "Hogg's Tales"—quite the reverse; in fact, I may add that I am not in the habit of interlarding puns with such matter.)

matter.)
Simultaneously with my sudden clevation I made the discovery that I was astride of a large wild boar and making 2:16 time toward the opening between the roots of the fallen trees; but I soon "got left," and before the boar had passed the roots I was over the log. At the same time there was a rising cloud of leaves and snow between the logs, as not less than thirty hogs and pigs of various sizes burst forth into the forest, exploding such a variety of affrighted cries as could not be equalled outside of pandemonium. They, however, left me a nice warm nest, which I crawled into, whitened my cap, and called for the turkeys, but in vain, If there had been any in hearing, the warning cry of the fright-

ancould not be equalled outside of pandemonium. They, however, left me a nice warm nest, which I crawled into, whitened my cap, and called for the turkeys, but in vain. If there had been any in hearing, the warning cry of the frightened hogs had driven them away.

A week or two later, when the snow was gone, I visited this spot again at midday, but the tenants were evidently dining out. A fan-shaped space radiating from the opening between the roots of the two trees for a distance of 100 feet or more was scraped clean of leaves, which were piled between the two fallen trees, and this was the regular bedroom of that drove of hogs. At the point formed by the interlacing treetops the leaves were piled level with the tops of the logs, or about four feet high.

The next time I visited this spot was early one morning and was for pure fun, which I obtained by dropping upon the nest a fairly good-natured, unsuspicious dog. The space was cleared within five seconds, the dog clearing first. I could nover coax him near the spot afterwards.

These wild hogs were never considered dangerous if let alone. One of the survivors of the great Hinckley Hunt once told me of an adventure which he had with a large drove of them, which shows that under all circumstances they might not be as lurmiless as rubbits.

When Medina county was first settled the nearest post office was Cleveland, thirty miles or more away from the settlements. They had a main road cut through the forest from Medina, the county seat, direct to Cleveland, with lateral roads from the settlement (and nearly all there those days were suble-bodied) to take turns in going to Cleveland each week for the mails and such light supplies as medicines, etc., as were needed in their respective settlements. These had a main road cut through the forest from Medina, the county seat, direct to Cleveland, with lateral roads from the settlement (and nearly all there those days were suble-bodied) to take turns in going to Cleveland each week for the mails and such light supplies as

working their jaws and frothing at the mouth as hogs do when fighting. He began to think of taking to the branches of the first favorable tree, when he chanced to come to a large tree which had fallen with the roots turned high in the air, forming an excellent retreat, upon which he climbed without delay, when the drove of hundreds of these wild brutes with frothy mouths quickly closed around him, and some of the old boars actually attempted to climb upon the upturned roots. He was about fifteen feet above his novel enemy, upon which he opened fire as rapidly as possible, but with his turnip-seeded pellets his rifle would miss fire about nine times out of every ten trials. He was short of powder, but had plenty of bullets and pellets, such as they were. He directed his aim at the most vicious boars, killing one every discharge.

had plenty of bullets and pellets, such as they were. He directed his aim at the most vicious boars, killing one every discharge.

As he did not have to fire at a distance of over twenty feet at any shot, he used light charges of powder, which, fortunately, held out, though he thought they held him prisoner about an hour and a half, during which time he succeeded in making sixteen shots, killing that number of boars. As each boar was struck by a bullet and fell, he uttered a peculiar, short squeal, and those nearest would gather around and quickly find, with their snouts, where the bullet had entered. They would then smell of each other's bloody snouts and utter low, gutteral grunts. Finally, the smell of blood began to dampen the belligerent ardor of the brutes, and they gradually raised the siege by slowly withdrawing sidewise for a considerable distance, and finally all disappeared in a body, and our friend continued his trip to Cleveland, where, the next day, he had his rifle fitted for caps, and the day following returned to the settlement with a good supply of ammunition and fully prepared for war. But the enemy did not put it an appearance and he was never molested again by wild hogs.

Menonar, N. J.

SOME CURIOUS KENTUCKY BELLEES.

SOME CURIOUS KENTUCKY BELIEFS.

SOME CURIOUS KENTUCKY BELIEFS.

THERE is an astounding prevalence of innumerable superstitions in many localities, even among classes who confess belief that the earth revolves, and that perpetual motion is beyond human achievement. After an absence of twenty-five years I hear the same ghost stories which troubled my childish credulity, and find prevalent the same old superstitions—a part of the rising generation's education.

During my youth a neighbor owned a negro preacher, a chunky, black old fellow, who claimed to have been ushered into this world with a caul over his face, from which favored circumstances he was heir to sight-seeing gifts denied all others not similarly blessed with that membranous veil at a most momentous period. Sister Nancy, our old cook, was one of his flock, upon whom he called frequently, as she ravely failed to have set saide an appetizing lunch for the emergency of one of brother Loudon's calls. His fund of hair-raising ghost stories, pluck-crushing witchcraft and horrifying phenomena in general, was certainly inexhaustible, as he never repeated except by request, and always narrated actual occurrences—of his own light and experience, or indubitably authenticated—with all the gravity and apparent faith that he expounded the gospel. Many are the times that old Nancy had to accompany me to my bedroom door, through which I'd seoot with an alacrity suggestive of a rat disgusted by feline familiarity.

I as scrupulously avoided falling asleep with arms folded across the chest as I should have shunned the biblical bears, of which I learned at Sanday school, had they been reported prowling about our neighborhood, for, had a witch come along and found me in that position she could have transformed me into a frisky gelding and forced me to submit to whip and spur till just before light—when the Fates decreed my return to my couch—to awake exhausted, feet and anaslace atted from the circumstance that I had been an unshod steed.

Leaden bullets were as harmless to witches (rarely mention of

unshood steed.

Leaden bullets were as harmless to witches (rarely mention of a wizard) as so many paper pellets from a pop-gun, but a silver bullet or a slug always brought 'em, if aim were steed."

but a silver bullet or a sing always brought 'ent, if aim were steady.

Actually, it hasn't been three months since an old lady told me that she bonestly believed herself bewitched, and that her ''old man' could remove the spell 'if he only would.''

Another comparatively young woman told with all carnestness that her best mileh cow was a long time bewitched, till a certain neighbor broke the spell by certain physic and conjuration, known only to himself, after which the cow rapidly recovered from a moribund condition. She believes a neighbor-woman the witch who could and had put a spell on her cow. These are the only instances I've met of witch-believing whites in many years, but its currency with the negroes is such as to impress an observer that it is natural and ine-radicable, as some of the most scalous advocates are among those reared in most intelligent and highly educated families who have earnestly striven to eliminate superstition by education.

those reared in most intelligent and highly educated families who have earnestly striven to eliminate superstition by education.

Though generally forbidden by owners to tell their own or the white children the many absurd stories in which their belief was explicit, the fascination to narrator and audience was such that we generally heard all. An anomaly in the negro's make up is the temerity with which he braves the chances of encountering spooks and hobgobins in general in his solitary onslaughts upon fowl roosts, melon patches, granaries, etc.

To-day more than half our agriculturists are influenced by the phases of the moon in seeding. Dark of moon for all root crops, light of moon for all stalk crops. I've known a farmer to plant Irish potatoes the afternoon before a new moon when every condition was unfavorable, rather than wait for next dark moon, nor could Whately convince him that failure could be referable to any fault of his.

Pork butchered in dark of moon will surely shrink in the pot and drip profusely when baconed.

Zodiacal signs are as scrupulously consulted before using a kaife in any of the many operations to which a farmer subjects his stock as are the ton commandments by a Christian. It is bad luck to first see a new moon through tree tops. A moon on point has poured out all its supply of water for that month, hence a dry moon; on its back it holds a supply to be judiciously dispensed. Bad luck to turn back after starting on a trip. Bad luck for any animal to cross your path in front unless you break the spell by spitting before passing the crossing point. Bad luck to turn back after starting on a trip. Bad luck to tran a friend for garden seeds presented you. Never trim a babe's nails before a year old to look in a mirror. Never start on a jouney on Friday. Never cut out a garment which cannot be completed before Sunday, or the owner will not live to wear it out. Clear sunset Wednesday or Friday is a sture sign of rain within a few days. If it doesn't rain one of the first three dog-days n

First twelve days after Christmas by some—by others, first twelve days of January in their weather, forecast the weather for the year. Opacity of the goose-bone as sure an index to the winter as ground-hog day to the weather of the following six weeks. However, there's an annoying diversity of belief as to ground-hog day proper, many contending for 1st, many for 2d, and others for 14th of February.

To-day I was favored with a solemn forecast of this winter, hypothecated on the condition of a beef's melt. An axe or hoe carried through a room so surely brings some calamity that the average matron sternly commands stranger, visitor, or member of the family to retrace his steps quickly, as the only way to avert a tragedy. A clash of hoes is a sure sign that handlers will work together next year. A hen that endeavors to set up as chanticleer is promptly beheaded the moment that her ambition is betrayed, else disaster to the family follows. A howling dog scents the old gent who bestrides a pale horse.

family follows. A howling dog scents the old gent who bestrides a pale horse.

Breaking a mirror entails seven years troubles. Overturning a chair guarantees celibacy the remainder of that year.

Shirt of a drowned man thrown on water at the point where he sank, will unerringly float to and sink at the point where the body lies.

The foregoing are a few of the more prominent superstitions fervently embraced and advocated by the majority. With little effort I could collect divers others, but enough for the nonce.

tions forvently embraced and advocated by the majority. With little effort I could collect divers others, but enough for the nonce.

Dreams are almost universally prophetic, but of such multifacious significance that reference is made to any standard dream book.

Now I will give you a couple of coincidences of which I know. One morning at breakfast-table a gentleman, devoid of superstition, stated that the night before he had dreamed of B—— and added, that he expected to next hear of his death. We had all heard that B——'s dissipation was rapidly hurrying him "across the river." That morning's mail brought a business letter from an agent, who was a mutual relative, which concluded with the expected news.

As a black bass figures in the following, it is more apropos. It is frequently quoted by devout church-members, of my acquaintance, as an instance of direct answer to prayer. An exemplary old gentleman was being ferried across the Cumberland River, in a cance, when he exclaimed, "I do wish I had a nice fish for my breakfast." Scarcely had he completed utterance of the wish when a large black bass flounced into the cance, and was served at breakfast. I could never learn the condition of the water at that time, for had it been muddy, nothing less astonishing to a riverman than that a paddle should have startled a bass, that in 'taking a leap in the dark' was likely to land in the cance as back into the water—no paradoxical pun purposed—a gentifying coincidence at any rate.

THE GLORIOUS GROUSE.

THE GLORIOUS GROUSE.

BY PAUL PASTNOR

PRINCE, indeed, of gamebirds is the glorious grouse! Mark how he demeans himself in his native wilds—regal in form and motion, proud in carriage, noble even in flight—launching with deflant whire! from his covert, every feather bristling like a plume, his jaunty crest all ruffled with indignation, and fairly a gleam of scorn glancing askance from his eye, as he dodges through the leaden hail and bilds our disappointed sportsman good-day! Strong of wing, subtle, and quick of sense, clad in feathery proof, tenacious of life, evasive even in death—is he not a splendid quarry, brother sportsman?

or life, events of the brother sportsman?

Come with me, if you will, this bright October morning, brother sportsman?

Come with me, if you will, this bright October morning, and we will jaunt into the territory of our woodland prince; we will follow him through all the windings of his leafy fastness, till he consent to do our pleasure, and travel homeward with us, dyelng our plebeian pockets with his most princely blood. Ah, we are off—and what a morning it is, my friends! It is a boon to be alive on a crisp autumu day, but it is indeed a blessing without price to be afield, with healthy vigor in one's veins, on such a day. There is just a film of frost on the brown stubble, and just a tinge of winter in the air, and just a suggestion of decay and death in the landscape. But overhead how clear the sky is! how pellucid the depths of sunny air! Yonder mountains stand out like camco-work against the horizon, their higher summits emphasized by the most immaculate of inaccessible snows. Every feature of the landscape is brought out with crystalline boldness by the purity of the atmosphere. Our very seives feel—if we may so express it—accentrated, brought out, vivified, intensified by this same frost-purged air. This is a morning (who can doubt it?) intended for the out-of-door enjoyment of God's creatures. The sportsman especially feels its spell. He has a call to be abroad to-day, and he cannot resist it. Hark! did you not hear a report from yonder wood? Though we are early on the march, there is some devout votary of gun and dog ahead of us. We will give him the slip, however, and punish him by commencing our opperations further along upon his beat.

der wood? 'Though we are early on the march, there is some devout votary of gun and dog ahead of us. We will give him the slip, however, and punish him by commencing our operations further along upon his beat.

Here is a likely cover, though small. Gentlemen, if your trusty guns are charged as effectively as your spirits, we shall have sport within the minute. See you not how Bella quivers and crouches along through the undergrowth, with nose and stern upon a line? 'Tis a sure sign she has winded birds. And look at the puppy—is he not magnificent for a youngster! All that playful awkwardness which you were pleased to make sport of a moment ago is gone, and he stands like a young prince surveying a kingdom. Ha! there he goes. Steady, Rob, steady! Beautifully done—he backs his mother like the dutiful youngster and chip of the old block that he is. Hie on, Bela!—charge, Rob!

Which way did the old cock go? All right—let him rutfle his crest and strut a few minutes on probation, while we bug the hens and reload. Steady, dogs! How they tremble—they are all on fire with excitement. Now we are ready. Up over the knoll and down into the gully on the other side. No one knows which way the old cock swerved, so we will divide forces. You, gentlemen, may take the puppy—he will follow you; Bella will go with us, at all events. As soon as the bird is bagged both parties return to this place. Now, for a taste of the true joy of the sportsman. His nerves are tingling with expectation; he has smelt powder; and to his trigger-inger is glued a feather by a drop of blood! The hunger of desire has been maddened by the bait of partial satisfaction, and it springs forward on its quest like a hound upon a damp, fresh seen. We know that that grand, defiant old cock is lying in ambush somewhere in the gully, and, if there be any virtue in setters' noses and sportsmen's nerves, he will soon be so snugly ensconced in someone's gunchesg, that he will never take wing again. Stealthily we creep along, guns cocked and balanced in hand, senses

from bank to bank, absorbed and noiseless as a ghost. Save a slight quivering of her stern, she betrays no excitement. She is a steady old hady, and she knows that her reputation is at stake. What if she should make a flush? You can see that grin possibility expressed in her anxious eye and wrinkled jowl, as she glides noiselessly across us. But hark! someone inst fired. Belind charges on the instant, looking up and the summon institude of the largest of the instant, looking up and the largest of the largest large

has been shot "settlin" or "treed." They are all properly accounted for—each having died as nobly as he lived. And somewhat of the peace of conscience attending a good deed visits the blood-stained sportsman, as he wends his way homeward through the shadows, reflecting that, though he has committed wholesale regicide, it has not been in the sneaking manner of the assassin, but openly, by the skill of arms; and he concocts a savory epitaph between stomach and brain, somewhat in this wise:

HIG JACET
THE GLORIOUS GROUSE,
Born in the Woods, And Broiled in the House. May he sleep in peace, And digest with ease,

A FAREWELL TO FLORIDA.

A FAREWELL TO FLORIDA.

64 AM sailing down the river"—not in "mylittle canoe," however, but in the staunch old tub "Rosa," which, as one of the De Bary line, plies between Sanford and Jackssonville. The last thing I did before shaking the sand of Sanford from my clothes, was to get my Forest and Sanford from my clothes, was to get my Forest and sanford from my clothes, was to get my Forest and strength from the post office, and now, lying in my berth, with the breeze blowing in at the open window, I take solid comfort reading how "Nessmuk's" Nipper came out, and viewing the ever changing panorama along the river as the steamer swings around the bends of this crookedest of crooked streams. I see many familiar spots where I have keenly enjoyed myself with gun and rod in company with friends. Yonder is a stretch of prairie more than a mile wide and long, level as a floor, the finest snipe ground imaginable; and there in December and January, kicking up my own birds in any desirable number, I have had such shooting as would satisfy the most fastidious and cager sportsman. There, too, on that same prairie when the water was up, unany a wood-duck, teal, widgeon, and others have fallen to my gun, and such times as I have had retrieving some of them, would be laughable if told. When the water was high enough to cover the whole prairie, and even encroached a little on the hammock which the live oaks with their crops of acorns fringed, the woodducks sought such spots and gorged themselves with fattening morsels, the while notifying the hunter by much squealing and quarreling.

In that hammock which rises like a solid wall of green

laughable if told. When the water was high enough to cover the whole pruirie, and even encrosched a little on the hammock which the live oaks with their crops of acorns fringed, the wooddlucks sought such spots and gorged themselves with fattering norsels, the while notifying the hunter by much squeding and quarreling.

In that hammock which rises like a solid wall of green afar across the level reach, I have grassed the struiling goboler as he paraded himself before his barren in the grass just outside the forest, where grasshoppers did abound, adding or apidly to the avoirdupios of turkeydom. I remember one morning when, having camped in the hammock over aight, I rose early and began my search for a drove that I snew 'used' in that neighborhood. I had not gone a hundred yards when such a down-pour of rain descended upon ne as I believe. I never experienced. I sought at once the protection of the most umbrolla-like young cabbage palm I sould find, and putting the lock of my gun under my arm, unched myself as small as possible and took it. How it did aim! A deuse mist filled the woods. Streams ran from the palm-fans, and compress myself as best I could, I got a good oaking. While I stood there hugging my gun, my eyes became unconsciously lixed on an object some hundred and lifty yards distant, and in the only direction in which I could nave seen so far. Through the mist the object looked like something animate, and after waking up to the fact that possibly it might be game, I concluded it was more turkey. Shaped than anything else, and then I made out another, and soon after another, all motionless.

How often, brother sportsman, have you seen game in lense forest or brush, where alone it could possibly have been seen—in every other direction your 'vision was shut out, and ext through that little nook or between those two trees your pulck eye caught a motion which led to your game pocket being heavier soon after, and you wondered how you happened to see the game. The whisk of the tip of a squirrel's all, or the

not be burned or dried.

In yonder hammock, the palmetto glades beyond, and on the pine hills further on I have shot deer, both in still hunting and with my Ferguson lamp by night.

But it is all over. As the steamer sweeps around each successive bend of this very crooked river, I bid goodbye to seenes of great pleasure. After eight years' residence in this much boomed and over-lauded State, I am leaving it.

much boomed and over-lauded State, I am leaving it.
Goodbye orange groves, which fill the whole air with almost overpowering sweetness, or bend under myriads of golden globes. Goodbye scale insect, rust on fruit, dropping and splitting thereof; potash and whale-oil, soap-mixtures, and poverty-stricken soil. Goodbye loveliest of lovely winter weather, and nine months of summer. Goodbye gnats, several kinds of exasperating horse flies and man ilies, and musical mosquitoes. Farewell tantalizing ticks and uncircumventable redbugs. Goodbye omnipresent and insatiate real estate agents. Farewell cool nights, refreshing mins in hot weather and drouths in spring, when you want to make garden. Goodbye gales in spring and hurtling hurricans in autumn. Goodbye canned fruits, canned vegetables, canned meats, and canned milk. Florida is paved with tin cans. Farewell fine fishing and hunting. Goodbye

thirty-four dollars a ton for hay, a dollar a bushel for corn, seventy-five cents for oats, and two dollars for Irish potatoes. Farewell unexcelled sweet potatoes and watermelons. And its, O! the tough beef of Old Florida. What apologies for cattle! An exaggerated sunfish on legs gives a good idea of their shape. Goodbye Italy of America. Farewell Florida. Vale! Vale! Vale! VENNOR CONFESSES THAT HE DON'T KNOW the true date of "Ground Hog Day." Is any one wiser than Vennor in this day and generation?

Hatural History.

BUZZARDS AGAIN.

BUZZARDS AGAIN.

The notes in your issue of April 20 on the buzzard has reminded me of two singular habits of this species in feeding, which I have never seen in print, and which I have verified by careful observation. These are, first, their custom when alighting on or near the body of a dead animal, of deliberately raising and spreading their wings to their full extent, at the same time bowing the head, which custom has given rise to the statement in the south that the buzzard always says grace before eating; second, the very first act of this bird is to take out the eyes of the animal. I have many times speculated as to why and wherefore of these acts, and as to the last-named whether the eyes were a choice tibit, or whether they had an idea that the organ of sight should be plucked out to render their operations unobserved.

I do not think facts will sustain your correspondent in his field mouse theory, as the buzzard will not attack a living creature, his propensities are for carrion only; so my experience has taught me in the many thousands I have observed feeding.

The young buzzard is covered with a pure white downy.

ence has taught me in the many thousanus I have contested feeding.

The young buzzard is covered with a pure white downy coat until nearly full grown.

OBSERVER.

Pittsburg, Pa., April 2:1.

[We incline to the belief that the eyes are attacked first because they are the softest and most vulnerable part, and can be plucked out with less effort than a hole can be torn through the tough skin. We think that the observations of naturalists have clearly shown that the buzzard does frequently attack living creatures. See standard works on North American birds.]

SPRING NOTES.

SPRING NOTES.

NOVA SCOTIA, April 18.—Just one month has elapsed since my last notes, and we have assuredly had a month of unusually wintry weather for the season. My note book gives the following: March 18, northeast snowstorm with heavy gale. March 23, 7 A. M., thermometer 4deg. March 24, 7 A. M., thermometer 12deg., wind west. March 25, 7 A. M., Steg., wind northwest. March 26, 7 A. M., 12deg., wind northwest. March 26, 7 A. M., 12deg., wind northwest. March 28, cloudy, with rain showers, thermometer at 8 A. M., 28deg.; at noon it rose to 48deg. Boys catch small trout in the river with hook and line; bait, a piece of pork. This day has been our first sign of spring. March 80, three robins (T. migratorius) fly past the house. March 31, thermometer at 7:30 A. M., 15deg, wind westnorthwest, very cold. A flock of finches pass over. Several robins about. Saw a song-sparrow (Melospica melodiu) for the first time this year. April 1, song-sparrow sings first time. Thermometer at 6 A. M., 18deg.; strong gale from west. Several bluebirds (Junco hyematis) about. At 4 P. M. a distinct peal of thunder. April 5, the first wild geese (A. canadensis) I have observed this season passed over about 6:10 P. M., about a quarter of an hour before sunset. Odd crough, instead of going east as all geese do over this province on their spring migration, this flock, numbering thirty-five, were going west in the direction of Annapolis Basin. April 7, put up four black duck (A. obscura) on the river. Robins hopping about the meadows. April 8, purple grackle (Q. purpureus) first seen. A flock of fifteen wild geese lit down in a neighoring farmyard among some domestic geese, and strayed about a quarter of an hour. Several ducks flying up the river at sunset. April 14, tobin sings first time in early morning, 6 A. M. Ducks flying up the river at evening. April 15, a charming day, bright, hot sun. Flies and a butterfly (V. antiopa) about. Buds of the dwarf osier (Saliz) called "pussies," just beginning to show white. April 16, a very large f FERN LODGE, Waterville, Kings Co.

Taunton, Mass., April 23, 1882.—The following are some notes of the arrival of spring birds at Taunton for 1882: Bluebirds (Statia statis) arrived February 29, were not abundant until March 20; robins (Turdus migratorius) arrived February 23, were not abundant until March 20; song-sparrows (Melospiza fasciata) arrived February 24, were not abundant until March 15; field larks (Sturnella magna) arrived March 1; purple grosbeaks (Carpodacus purpureus) arrived March 1; purple grosbeaks (Carpodacus purpureus) arrived March 16; purple grackles (Quiscalus purpureus) arrived March 19; woodcock (Philohala mirived March 26; red-tailed hawk (Buteo boratis) arrived March 26; white-bellied swallows (Iridoprocae bicolor) arrived March 29; brown thrush (Harporhynchus rufus) arrived March 29; grass finch (Poecetes gramineus) arrived March 29; sprown thrush (Harporhynchus rufus) arrived March 29; grass finch (Poecetes gramineus) arrived March 29; sprown thrush (Harporhynchus rufus) gravelses (Scoleophagus ferrugineus) arrived April 2; rusty grackles (Scoleophagus ferrugineus) arrived April 6; cooper's hawk (Accipiter (Dendreca coronata) arrived April 6; cooper's hawk (Accipiter (Dendreca coronata) arrived April 6; cooper's hawk (Accipiter (Dendreca coronata) arrived April 6; kingfisher (Ceryle alogon) arrived April 16; purple martins (Progne subis) arrived April 23.— J. C. C.Anoox.

Deering, Maine, April 22.— I give you below a list of early

DEERING. Maine, April 22.—I give you below a list of early spring arrivals, with the dates at which the first specimens were observed. The crow (C. americanus) was with us all winter. March 5, bluebirds (S. siatis); March 6, robins (T. migratorius) March; 1, song-sparrows (M. melodia); March 12, swamp-sparrows (M. patustris); March 28, red-winged blackbird (A. phaniceus); March 31, Cooper's hawk (A. cooper);

March 31, red-tailed hawk (B. borealis); April 2, immense flocks of snowbirds (J. hyemalis); April 4, American bittern (A. minor); April 5, heard frogs in the marsh; April 9, foxsparrows (P. tikaca); April 11, swallows (II. biotor); April 14, great blue heron (A. herodias); butterflies and honeybees; April 16, red poll (A. linaria), male and female; bluebirds and song-sparrows mating; found May flowers, arbutus (Epigea repens); rusty grackle (S. ferruginests); cow birds (M. pecoris); April 17, pigeon hawk (H. columbarius); April 18, pewee (S. fuscus); April 19, immense flocks of wild geese going north, several hundred through the day; April 21, golden-winged woodpecker (C. aurtaus).—J. E. M.

THE LINNEAN SOCIETY.

J. E. M.

THE LINNEAN SOCIETY.

A The annual meeting of the Linnean Society of New York, held at the rooms of the American Geographical Society, on March II, 1882, the election of officers for the ensuing year resulted as follows: President, Mr. Eugene P. Bicknell of Riverdale-on-Hudson, New York city, who was re-elected; Vice-President, Mr. H. B. Bailey of Orange, N. J.; Recording Secretary, Mr. L. S. Foster of New York city, Corresponding Secretary and Treasurer, Mr. Newbold P. Lawrence of New York city, who was re-elected.

The society has been active during the winter, and a number of interesting papers have been read and discussions engaged in. At the opening meeting, on November 19, 1881, Mr. L. S. Foster read a paper calling attention to the very singular and absurd notions anciently entertained of the economy, properties, and uses of many familiar objects of natural history. Quotations were given of prescriptions for a long category of human ailments which were utterly ridiculous, the remedial agents usually being produced, as averred, by some peculiar treatment of special portions of the anatomy of different animal forms. In some quotations touching the names of birds the origin of some now familiar names was hinted at. On December 10, 1881, Mr. H. B. Bailey read a partial list of the birds of Nova Scotia, which forcibly presented the interesting faunal peculiarities of the region. Mr. Bicknell exhibited a specimen each of the hoary and New York bats (Atalapha cinerius, Cs., and A. noveboracensis, Cs.) from the same locality, were so entirely dissimilar, both in coloration and proportions, that it seemed very unlikely that they could be forms of a single species, as some have thought probable. On this occasion Dr. A. K. Fisher made some interesting remarks on our species of Vespertitionida. On January 14, 1882, Dr. C. Hart Merriam read the introduction to a paper on the birds of the State. Mr. Bicknell alluded to the catalogue he has had in view of the birds in the vicinity of New York city and Long Is

cussions.

The society has been active in introducing into the proposed amendment to the Game laws now before the Legislature a provision for the prevention of illegitimate destruction of small birds and the issuance of permits by properly authorized institutions for the necessary collection of the same

in pursuit of scientific study.

Meetings will be resumed in the fall.

A GOOD WORD FOR THE SHRIKE.—Livonia, N. Y., April 20.—If all sportsmen should follow "Jeree's" advice in a recent issue of FOREST AND STREAM, I think that they would not only do themselves much harm, but would greatly injure the form of the state of th not only do themselves much harm, but would greatly injure the farmer to whom they are indebted to a great extent for their pleasure. I do not deny that shrikes may kill young quail, but I do most emphatically dispute the statement that it does no good. The shrike is on the increase around Lere and I am glad of it, because, as the following statements will show, it does much for which both the sportsman and the farmer ought to be thankful. I have seen the shrike kill sparrows in great numbers, going among a flock and destroying as many as five at one time. I have also seen them kill many field mice, and, one day last summer, while going through a field, I saw a shrike dart down from a tree near by, and seize a small snake which was robbing a quail of her young, us I could tell from her frantic actions. If this is not proof enough to the reasoning mind that the shrike, which your correspondent would have us believe is nothing but a curse to the interests of sportsmen, then go forth with your shotguns and kill them wherever you can find them, as you would a wolf among a flock of sheep.

About An Own's Nest.—Saratoga Springs N Y April

About a won among a nock of sneep. F. E. S.

About an Own's Nest.—Saratoga Springs, N. Y., April
22, 1882.—Editor Borest and Stream: While out after birds'
eggs one day last week, I found the nest of a great horned
owl which contained two young ones. The nest was in an
ash tree about sixty-five feet high, and was about forty feet
from the ground. The owls were the tenants of an old nest,
which, by my own observation, was occupied in the spring
of 1881 by a crow, in the spring of 1880 by a red-shouldered
hawk, and 1879 by a red-tailed hawk. The owl had added
no new lining to the nest The young were, I should think,
between two and three weeks old, just commencing to fledge
out, the wings quite well feathered We brought one of the

young ones home, but it died on the way. It was very large, and when lying down would cover a space eight inches in diameter. The legs were feathered finely. I have found a great many owls' nests, having found them in old stumps, and I have taken three different species of eggs from the nest from which I took the young owl, and am only sorry I could not have said I have taken four different kinds of eggs from one nest. I think it would have "capped the climax." The nest was near Victory Mills, about eight miles from Saratoga. The nest was somewhat enlarged on the outside with dead limbs, and the inside shape was somewhat modified to fit the shape of the sitting bird. Two years ago I found owls' eggs when the snow was two feet deep in the swamp. The interesting feature of this nest, however, was that besides the young it contained a number of birds and mammals which had been captured by the old ones, a list of which I give you: One mouse, one young muskrat, two cels, four bullheads, one woodcock, four ruffed grouse, one rabbit, eleven rats. The things taken out of the nest weighed almost eighteen pounds. A curious fact connected with these captives was that the heads were eaten off, the bodies being untouched. Do not owls usually cat the bodies of their prey"—HAWKETE.

Caught Napping.—While out in the woods last week I was fortunate enough to capture a screech owl (Scops asio) in the red plumage. He was fast asleep in a hole at the top of an old dead elm tree, which stood in a field near a small marsh. I carried him home and put him in a cage, and he is now quite tame. I have fed him on wild pigeon, mice, and small birds. The pigeon was about as large as the owl, but this made very little difference to the latter, for in one night he devoured nearly the whole of the pigeon.—J. C. Cahoon, (Taunton, Mass., April 27).

CAGED ALBINO ROBIN.—At one of the New York bird stores on Sixth avenue, above Twenty-third street, your correspondent saw a week ago a true albino robin. The bird is caged, perfectly white, and has the pink eyes of all true albinos.—Homo.

THE BLACK TAIL DEER HUNTERS of Hill's Hole want to know all about "Ground Hog Day." Can any one help them?

Game Bag and Gun.

* * * * * Scaipe | scaipe |

In what beautiful shape the pointer does his work,
While the setter wild, like a wayward child, To heel brings up the rear.
The wind is high, the longbills shy,
A devious path they fly.
Finger and brain in their liveliest mood
Must work with "deliberate promptitude," Or the bag bangs light to-day. With the gale in our teeth, glimpses brief Of the king of brown birds, as he leaves the heath; No laggard now, with his slothful swing, Our longbill clean to the grass can bring. Scaipe! scaipe! in what beautiful shape To heel brings up the rear.

NEW JERSEY GAME LAW.

NEW JERSEY GAME LAW.

THE last Legislature of this State made no changes in the game laws, merely amending the fish laws so as to allow of the taking of black bass from June ist instead of July 1st, as formerly. A bill had been carefully prepared and introduced into the Senate under the auspices of "The New Jersey Game and Fish Protective Society," which was a consolidation of all the game laws under the head of one act. An egregious typographical error existing in the rabit law was corrected, and other good features introduced. The bill passed the Senate, not, however, before some wise (?) Solon had amended it so as to prohibit ruffed grouse shooting in the State for five years. This amendment was objected to in the House, and the bill "hung fire" there until near the close of the Legislature. It was then found that in consequence of the great furore created in the House by the attempted passage of obnoxious railroad bills, the game bill, together with a large number of other important measures, must "ile over," the Legislature adjourning before it could be brought up for final passage. The game laws therefore remain the same as last year. "The New Jersey Game and Fish Protective Society," whose headquarters are at Plainfield, have issued a card of the "open seasons" and panalties prescribed for infringement of same.

The officers of the society are: President, James S. Voseller; Secretary, W. L. Force, Plainfield, N. J.; Treasurer, Wm. E. Jones; Vice-Presidents, Geo. P. Suydam, Jno. I. Holly, Percy C. Ohl; Counsel, Wm. B. Maxon, Plainfield. The open game seasons are: Ruffed grouse, Nov. 1 to Jan. 1; quall, Nov. 1 to Jan. 1; woodcock, July 1 to Aug. 1 and Oct. 1 to Dec. 16; rail bird, mouths of Sept., Oct. and Nov.; reed bird or marsh hen, Aug. 25 to Dec. 1.; prairie chicken, Oct. 15 to Dec. 16; rail bird, mouths of Sept., Oct. and Nov.; reed bird or marsh hen, Aug. 25 to Dec. 1.; prairie chicken, Oct. 15 to Dec. 16; rail bird, mouths of Sept., Oct. and Nov.; reed bird or marsh hen, Aug. 25 to Dec. 1.; prairie

The penalty for killing any insectivorous bird, or taking or destroying the eggs of such birds is ten dollars for each

or destroying the eggs of such birds is the donals for coordiness.

The penalty for trapping or snaring any game bird at any time or place, either on one's own property or that of another, is fifteen dollars for each and every offense.

Non-residents not complying with the by-laws of the game protective societies of this State are prohibited from shooting in its limits under a penalty of fifty dollars, or imprisonment until the fine is paid. Secretary's address, W. L. Force, Plainfield, N. J. Membership fee, two dollars.

Cox.

WILD PIGEONS.—Wild pigeons are nesting on the head of the west branch of Pine Creek and its tributaries, in Potter county, Pa., about nineteen miles from Ulysses. The nesting is reported to be about four miles long, and extending westward daily. A new body of birds came in Sunday morning, and if they are not driven out it bids fair to be a large nesting. The number of men in the nesting section cannot fall far short of 600—some estimate the number at 1,000.—E. W. B., Wellsville, N. Y., April 29.

A PAGE FROM OTHER DAYS.

"MY FIRST WILD GOOSE."

WHAT a thrill ran through me as I read that heading in one of the late numbers of the Forest and Stream the other day! How memory ran instantly back to that cool November day, many years ago, when I also achieved that greatest of boyish triumphs and laid low my first wild goose. Intervening years, passed over with all the quickness of thought, are checkered with unnumbered hunting episodes among the mightiest game that our country affords, years spent with the buffalo, elk, black, brown and grizzly bears of the far West, have left nothing in their proudest moments to compare with the happiness of that "first wild goose,"

goose."

The two boys who pushed out from the wharf in the Blackstone River, between Pawtucket and Providence, Rhode Island, in a small sailboat, on the day aforesaid, never dreamed of a prize greater than a black duck or a bluebil, with which to grace the Thanksgiving table; and as they chased the wary flocks of ducks hour after hour across the broad expanse that separates "Bucklin's Island," from the Butler Hospital, without getting a single bird, their hearts became sick from hope long deferred, and the possibility of returning empty-handed thrust itself before their minds with disagreeable prominence as the sun dipped low in the west.

west. In tacking to and fro across the river the eyes of the writer, who it is hardly necessary to add was one of the boys mentioned, had frequently rested for an instant upon a large bird floating alone in the distance, apart from and somewhat out of the courses usually taken by the ducks when driven from the flats by our approach; but taking it for granted that it was one of the great loons, quite common in those waters, we paid but little attention to it until in making a long tack to get to the windward of a small flock of duck we approached nearer than at any previous time, when to my surprise and delight I discovered that prominent distinguishing characteristic, the white collar of the Canada honker.

To gibe and turn our boat in this direction was the work of a moment, and placing the tiller and sheet in the hands of my companion. I seized the largest of the two guns we carried, an old Continental musket changed from flint to percussion, and seating myself at the foot of the mast

we carried, an old Continental musket changed from films to percussion, and seating myself at the foot of the mass with a heart thumping like a quartz mill in my breast, I waited the final moment. How my arms ached as I held that great gun to my cheek long before we were near enough to shoot. The boat was dashing through the water like a grampus under about all the breeze she was able to stand, but it actually seemed to me that the goose was swimming faster than we were going, so impatient did I get. The thought of letting that goose get on to the wing before I fired, was the very last I should have entertained. I fired. The head of the bird dropped helpless upon the water; his great wings began flopping vigorously; the helmsman threw the tiller hard aport; I leaned over the gunwale as far as possible to secure the prize; the boom swung like lightning over sible to secure the prize; the boom swung like lightning over to our side; the bags of sand-ballast shifted and we were upset in a twinkling. As the water poured in on one side we "lit out" over the other; and in far less time than it takes to write it were both standing on the keel with the boat bottom up. "Grab that goose, De Witt, "shouted I as a wave washed him within reach of my companion, by whom he was rapidly banded out of the wet hauled out of the wet

hauled out of the wet.

Some oystermen half a mile distant, seeing our dilemma, came to our assistance, and righted our boat. The large gun I had saved; the smaller was found caught in the thwarts; but the shot pouches had gone to the bottom. I was wet only a little above the knees, and my companion hardly at all; but we had the goose for Thanksgiving.

FORKED DEER.

SAN FRANSCISCO.

THE LAST BEAR HUNT IN SARATOGA COUNTY.

THE LAST BEAR HUNT IN SARATOGA COUNTY.

INOTICE that some of your correspondents have related experiences that transpired many years ago. I claim the like privilege, and if this should come to the notice of any person living in the vicinity of the last bear hunt in Saratoga county, N. Y., I wish them to let it be known through the columns of your paper. The hunt was some fifty-five years ago; I was then a small boy, but think I remember distinctly all that transpired. It was in the fall of the year. News came to the little town where I lived that a large black bear had been seen on Quaker Hill. The hounds were gathered together in that vicinity, and the guns were all reloaded and new flints placed in position. Dogs were fed an extra allowance. Mothers huddled their little darlings indoors and watched at the chamber windows. All Quaker Hill was trembling with fear. There was a bear in the woods. Early in the evening the dogs were all turned loose, all enger for the fray. All night they followed the trail of that black bear over rocks and mountains, through spruce swamps and into creeks; and early in the morning as the sun rose to warm the castern side of Quaker Mountain, one could hear the deep, loud baying of those dogs while they were in hot chase of the bear. On came the hunters with their oft repeated shouts to encourage the dogs. The dogs would come up and clinch the learn but old bruin would field for the sear of the part but old bruin would field for dear if the and at each bear. On came the hunters with their oft repeated shouts to encourage the dogs. The dogs would come up and clinch the bear, but old bruin would fight for dear life, and at each pitched battle some of the dogs would get crippled and were forced to abandon the chase. As the sun rose up so that the prey began to get hot, he took to the water and was determined to fight it out in that pool. The dogs came up and a regular pitched battle commenced with all the dogs on at once. One fine dog was instantly killed, while another was crippled so severely that he was uscless, and that moment help came; one of the men crawled up behind a large rock, close to the scene of conflict and shot the bear dead on the spot. This ended the last bear hunt in Saratoga county, N. Y. I saw one of the bear's feet, it was brought into town and measured four and one-half inches across the ball of the foot, just back of the toes.

and measured four and one-half inches across the ball of the foot, just back of the toes.

I well remember a very large gray wolf passing through that neighborhood. Two of these hounds followed him and were seen in hot chase on the trail thirty miles south of where they started. I would like to know if there is any such dogs in existence at the present day. I have been raising hounds for forty years, but can get no such dogs as they were in those days. I have owned some imported fine blooded hounds, and have seen all sorts of fine-haired dogs, but none would compare with those of my boyhood.

I well remember the first percussion cap I saw. I was a small boy and attended the ferry on North River. I once ferried a man across the river in a skiff, he had a percussion ritle. I saw the cap on the tube, I offered him sixpence for a cap, but could not get one. That was fifty-five or fifty-eight years ago.

My first deer was seen forty-eight years ago in Chautauqua county near Jamestown. I was then quite a big boy. It was just west of Jamestown, in the month of February, and the snowflakes were falling big and fast. I was hunting and saw what I supposed to be "Old Tracy's" Jack feeding by a brush heap. I sighted my rifle at his heart and thought how easy I could have killed him if it had been a deer. My nerves were steady while he was a Jack, but he raised his head and then he was a deer. Then I sighted again or tried to, but my nerves had weakened. I had the buck fever, and the old fellow showed me his flag and away he went. Of course I didn't shoot. I might have done as a lawyer did who hunted with me in Iowa. He shot at it to hit it if it were a deer, and to miss if it were a calf; and it was a calf. and he missed it.

But I can say now to the sporting fraternity that those boyish days have past and I am on the decline, but I have made my moccasin from the skin of many an old buck since I saw "old Tracey's Jack."

N. M. S. CARTHAGE, Mo.

RAT-HUNTING IN THE FLOOD.

"The home of my boyhood, my own country home, The lune of my boynood, my own country no I love it the better wherever I roam.

The lure of proud city, the wealth of the main, Hath never a charm like my own native plain.

"The home of my boyhood, my own country home, I love it the better wherever I roam.

The lure of proud city, the wealth of the main, Hath never a charm like my own native plain."

HAVING been born and raised in the country, I can fully realize the feelings of the writer of these lines, which I quote from memory. For several years I have been closely confined by business in this city, where, of course, we can have none of the sports and pleasures that we used to enjoy in the forest and on the stream. And now, when a day's sport is to be indulged in, we must pack our valise with "traps and fittings," board some outward bound train, and many miles must be traversed before we can step down in a territory where we may reasonably expect to find any game that is "worthy of our steel."

How well do I remember the small cottage that stood within a stone's throw of the woods where I have enjoyed myself many an hour in throwing out the sveckled trout, pickerel, bullheads, perch and dace. And near our home was a large meadow, where I used to set steet the sound in the spring and shoot woodcock in the fall. Occasionally I would get a shot at ducks in the river, and when with my old muzzle-loading gun I would kill ons or two of them, no "King of the Cannibal Islands," in his full dress of 'plug' hat and a pair of spectacles, felt prouder than I. Sometimes now, I think as I look at my costly breech-loader with its fine fittings, its rich Damascus barrels, and all modern improvements, together with my "toggery" of a thousand and one sporting articles that I had never heard of them, that I cannot enjoy a hunting trip as I did then with a well well-weld-olding yun, powder horn and shot carried in an old bottle. One carly spring (when I was about sixteen years old) the schoolmaster had occasion to correct me with a well meant lecture for absenting myself from school. For instance, if a light fall of snow should greet my merry eyes in the morning, I would take down my gun, whistle to Rover, go hunting rabbits, and, perlaps, would

(well overflowed), Jim motioned to me to "port my helm," and as the bow swung round to the left, the report of the gun rang out across the water, and a rat was kicking his last kick upon its surface. The next one was found in the same way and again Jim "sent him up." I told Jim that I did not see either rat until after he fired, and he responded that it "required the eye of an eagle to see some of them, for they would lie with nothing but the nose and part of the head out of the water" among the bushes. Soon one came swimming across a cove, and as he neared the boat, Jim gave him a broadside, and it was a comical sight to see him perform in his attempts to dive under the water. But it was no go. He was too hard hit, and with the paddle I soon dispatched him and gathered him in. Down the river we went, and the sport with the rats was but a repetition of the first three shots, with of course a little variation. Some were missed and some wounded ones succeeded in making their escape. The muskrat is very tenacious of life, and when brought to bay, will fight like a tiger. When we went ashore (two miles below where we started) we counted forty-one muskrats, two ducks and a crow. We stopped shooting because our ammunition gave out, and if we had more we could have killed more rats. After landing, Jim went up the hill and soon returned with an armful of straight sticks, cut from second-growth hickory. I held the rats and Jim cut the skin around all four legs at the knee, then with the point he cut the skin from each gambrel to the tail, unjointed the tail at the base, and stripped the skin off whole down over the head. Then taking one of the sticks he bent it something like the shape of the letter U, and pulled the skin (wrong side out) onto the stick, stretching it very nicely. The skins, after salting and drying, we sold for about twelve to fifteen cents each. We left the boat down there, and Jim went down

afterward with a horse and wagon and got 'it. The next morning I began to realize that there might be something wrong at school, so all the way there I was turning over in my imagination what might occur in the "scene that ensued." I was pleased at the idea of the teacher being so foolish as to "tackle" me with intent to whip me (almost as large again as he was), and the more I thought of it the more pleased I was.

as. It was well (as the Irishman said about the bull), that I

It was well (as the Irishman said about the bull), that I did my laughing before hand.

Arriving at the school-house and going through the regular morning exercises, the teacher inquired about my whereabouts the day before. I told him where I had been and began to explain what a glorious time it was for rats, but he did not seem to be very enthusiastic upon the subject of gunning, and he refreshed my memory with his promise to chastise me. I objected and took exceptions on the ground that did he attempt it, I would pitch him through the window, sash and all. The words were hardly out of my mouth before I found myself upon the floor, and with the "ruler" rapidly vibrating with a violent vertical motion upon a particularly fleshy part of my person. I will draw the curtain.

IRON RAMROD.

SOMERVILLE, Mass.

DIVINING RODS

DIVINING RODS.

YOUR late correspondence about divining rods has recalled to my mind an experience of boyhood's days. When about fitteen years of age, my brother, two years younger, whispered to me one day that he was about to become rich by coming into possession of some old gold coin, and if I could keep a secret he would try and work me in for a share. Of course I promised to do so, and also to render all the assistance in my power by digging for the hidden treasure wherever it might be buried. He said that down by the lake he had met a strange man with a divining rod, who inquired of him if he had ever heard of money being buried about there. My brother remembered hearing that an old sea captain, who formerly lived five miles up the lake, was supposed to have been a pirate in his early life, that he had brought home a large amount of specie, and fearing that justice would find him out, had buried it near the lake shore in a large iron pot under a maple tree; that he had never told where, but on his death bed had tried hard to point out the spot, but was unable to do so. The man with the rod assured my brother that if he could be landed anywhere in that vicinity the rod would draw him at once to the treasure. My brother volunteered to guide him to that heighborhood for a share in the contents of the pot, which was generously offered. They had walked down there on a hot August day, and located the spot with little difficulty. The ground was very hard and stony, and being in plain view of the neighboring farm house the digging could only be done after sundown, (for fear the farmer would come down and claim the pot after we had uncarthed it). So I was view of the neighboring farm house the digging could only be done after sundown, (for fear the farmer would come down and claim the pot after we had uncarthed it). So I was taken into the company the day after their return, and, like all boys at that uneasy age, was delighted with the prospect of adventure and fortune now before me. The diviner showed me his two rods, one to draw in a horizontal direction, the other toward the carth. He assured me that he could go into the city of Auburn blindfolded, and, taking his rod in either hand, could go direct to the banks or any place where there was any amount of specie. I got my uncle's gold watch to see the rod attracted, but it wouldn't attract in any person's hand but the diviners. I finally made a confident of my dear old uncle, (who was a boy with us always) and taking our boat, with picks and shovels, we started a little before sundown for the gold. Uncle said he had no faith in the rods, but would stand guard to warn us of visitors while we were digging.

Waiting under the maple until the sun was down we went to work with a will and soon had quite an excavation; fearful, however, that the farmer who owned the land would claim the pot after we had unearthed it. The ground grew very hard and stony as we proceeded, and Uncle remarked that it hadn't been moved since the Flood. We had already reached the depth the diviner said was necessary to reach the treasure, and no signs of the old pot. The evening was very warm and there began to be "signs" of a coming thunder shower.

warm and there began to be "signs" of a coming funner shower.

Resting from our labors we were a little startled by a rustling in the bushes near the fence, and presently there appeared something taller than a man and "all in white," and which we could dimly make out to be standing motionless as a statue and evidently looking us over. The diviner whispered that it was the owner of the land and requested Uncle to go and speak with him. He went toward the apparition, which did not move, and soon returning said in a very solemn voice that if we had any message to send home, or the diviner a prayer to make, we must improve the few minutes that were allowed us to do so. The diviner inquired, "Is it any one you know?" and his voice shook audibly, and my brother and I, although beginning to suspect a trick, were quite a little frightened by his manner. All this time the image in white sfood staunch as an old pointer.

All this time the image in white stood staunch as an old pointer.

We looked at one another and it had grown so dark that our features could hardly be distinguished, but still we could plainly see our visitor in white, and also see that he was drawing near. The diviner hastily gathered up his rods and coat and was ready to take flight when I caught hold of Uncle's hand and asked him, "What is it?" In a hoarse whisper he replied, "The fool-killer, and you better get to your boat as soon as possible." We gathered up our tools and clothing, and as the rain began to patter among us we had some excuse for haste. The diviner leading the way we soon reached the shore, pursued by our relentless enemy, which we soon made out to be an old white horse. Turning our boat bottom up we crawled under and waited until the shower passed, when we rowed home. The diviner refused our invitation to take a bed for the night, and said he would lie on the hay in the barr. We looked for him early in the morning, but have never seen or heard of him since.

MOTTVILLE, N. Y.

Shooting for Chicago Sportsmen.—The Chicago man who wishes ducking grounds other than those about South Chicago can be posted if he will consult Mr. Fred. Gould or Mr. Wildard Stanton of Valparaiso, Ind. Within a two hours' ride of the town just mentioned the writer was taken to excellent fly-aways by Mr. Stanton, and, by-the-bye, had on the same trip the best snipe shooting he ever enjoyed. There are several places on the Kankakee that are easy of access from Valparaiso, Ind., and should not either of the above-named gentlemen direct, others in the town could.—Homo.

DECOY DUCK SHOOTING.

TELL you there is nothing like it! that is, duck shooting over decoys. It beats your fall quail shooting or your autumn rabbit hunting "all hollow!" Just imagine yourself (if you have ever tried it) aboard your schooner in one of the autumn rabbit hunting "all hollow!" Just imagine yoursell (if you have ever tried it) aboard your schooner in one of the many sloughs which perforate your hunting grounds, and getting up long before daylight, with the cold but bracing air circulating around you. After getting your hot cup of coffee, and with a pocketful of hard-tack, off you start. A brisk walk (after landing in the schooner's boat) of a few minutes brings you to the place where you have left your skiff tied in some little cove just off the main pond. You get iu, lay your gun beside you, whistle in your dog, and, shoving off, paddle silently out upon the pond. It is still dark, but nevertheless you hear the ducks rising and whizzing, as they pass in durk streaks over your head; and the geese, flying more slowly, but filling the air with their cease-less honk! honk! Your blind is situated near the other end of the nond; so paddling slowly around the shore with as of the pond; so paddling slowly around the shore with as little noise as possible, you silently approach.

The castern horizon is now being tinged with a scarcely perceptible light, which gradually increases as the day approach.

On reaching your blind you proceed to set out your decoys, hich occupies you some time, as you have nearly three

You can easily distinguish things now, and the ducks are

You can easily distinguish things now, and the ducks are flying thickly around.

You then shove your skiff in the blind and putting up one or two bunches of tule, to cover the entrance, you arrange your things handy and are ready for your shooting.

The curious thing is that now that you are ready for them, the ducks don't seem to be half as thick as they were before. But soon you see a fock coming "down wind" right toward you, and, on their near approach, they prove to be canvasbacks. Suddenly they spy the decoys, and wheeling in one unbroken circle they prepare to alight; but you not taking the chances, wait until they are over you, and then pour two barrels in quick succession into their midst, and down come three fine drakes.

parrels in quick succession into their midst, and down come three fine drakes.

As your dog springs out of the blind to retrieve them you reload your breech-loader and look out for another advent. Your dog is just bringing in the last duck as, glancing quickly down the pond, you see a flock of teal just skimming the surface. As they get abreast of you (they are quite a distance off) you blaze away and look up (of course you expect to see the water covered with dead and wounded)—there, all alone, flops one poor little teal with a broken wing!

You are just thinking what was it that made you make such a miss, when suddenly you hear splash! splash! accompanied by a whirr of wings, and peeping cautiously out from your blind, you espy the water in front of you dotted over with a flock of ducks. Suddenly your dog moves in the boat behind you. The noise attracts their attention toward the blind. Quick, or they'll be gone! You spring up suddenly and pour in a barrel on the sit, and as the survivors rise, startled and bewildered, you give them another shot. You have made a good shot this time and it keeps your dog pretty busy.

So the day wears away. Now you have a that the flow in the sit and a the survivors. pretty busy.

pretty busy.

So the day wears away. Now you have a shot at a flock, now at a single duck, sometimes at geese, both white and gray; other times, but more seldom, at magnificent swans, some weighing twenty-five pounds. And upon your return in the evening to the schooner, loaded with your game, and as you sit around the cabin table, sipping your coffee, you tell your comrades—who have had their fun at other ponds—how prettily you knocked that drake canvas-back, or how finely that goose tumbled; or you don't see how it was possible you could miss that mallard—you had such a fine shot. And so you continue telling your day's adventures till you tumble into your little bunk and there have another duck hunt in the land of Nod.

Duck-call.

A GEORGIA DOVE MEADOW.

A GEORGIA DOVE MEADOW.

In Your issue of February 23, I noticed a sketch contributed by "T. B. A.," headed "A Dove Meadow." We have just such a place as described by him in an adjoining county, and my curiosity has been greatly excited to know the cause of the constant visit of these "holy birds," as called by some, to this waste and barren looking meadow, and I am not yet satisfied as to the cause of their visits. I had never heard of another such place until seeing the communication of "T. B. A." He says some think that they come for gravel; others say for salt. In the case of others it cannot be for salt, for we have no salt in our soil. We, too, like "T. B. A.," have spent many years in blissful ignorance of this "happy hunting ground" so near at hand, until last August a countryman from the low grounds of Ogeochee River, in Washington county, being in town and seeing a mmber of us making preparations for a big dove hunt to a distant grain-field, remarked in a casual way to the writer, that if we would come down his way "we could kill more of them sort o' birds than we could bring home;" and he hen told of this secluded meadow. He said he had been living near there all his life, and he had never known a summer when there were not hundreds and hundreds of doves there every day. Upon inquiry from responsible parties living near the place, I found that there was just such a place as described, and that there were always doves there during the summer.

Upon this information we made up a party of some six or seven and visited the spot. We reached the spot or what

place as described, and that there were always doves their during the summer.

Upon this information we made up a party of some six or seven and visited the spot. We reached the spot or what we thought was the place as described, about nightfall, completely broken down by a ride of twenty miles over a perfect sandbed of a road, in the scorching Augustsun. The roads were indeed so heavy that we sometimes had to get out and walk and carry our guns on our shoulders, and it was even then all our horses could do to pull the empty vehicles through the sand beds. It was amusing to see our lazy man, Dr. A——, who sometimes keeps but one eye open, for the reason that it requires less energy to keep one eye open than two—to see him trudging along through the sand, coat off and collar opened, dripping from head to foot with perspiration, a nine-pound breech-loader across one shoulder, and a bag containing a hundred loaded cartridges swing across the other—trudging along as if every step was hist.

lust.

As we thought we had reached our journey's end, we As we thought we had reached our journey's end, we were about to unhitch our horses and prepare for supper, when we found that we had taken the wrong road; and to our horror we were completely lost. A dark cloud was fast approaching, night was upon us and we way down in the river swamps, and not a sign of a house for miles around. If you, kind reader, have ever been in a similar fix you can imagine our feelings. We were indeed a disgusted party. All of us wished ourselves at home. De Lamar T—,

the most disgusted one in the party, would, I think, then and there have taken a solemn oath never to go on another videor hunt?

the most disgusted one in the party, would, I think, then and there have taken a solemn oath never to go on another "dove hunt."

To shelter ourselves from the approaching storm we bounced into our wagons and determined to drive until shelter was found, and soon, to our joy, the kindly light from a farmer's house came in sight, and we were in a very little time under the hospitable roof of a young bachelor, Dr. G.—. The next morning we rose bright and early to repair to the "salt lick," as the dove meadow was termed by the country people around. The party were all at the highest pitch of excitement. Johnny B— was so completely filled with enthusiasm that he even forgot to eat his breakfast. After a ride of about a mile we reached the longed for place. The meadow was a flat bottom of some forty acres or more, grown up in weeds waist high, and without trees or grass. Near the center was a barren strip of ground, some fifteen feet wide and a hundred feet long; not a single weed or blade of grass was growing there. Before we had unhitched our teams the doves were flying in—singly, and in pairs, and in bunches of four or five, never more than that. They seemed to come, not from one direction alone, but from all directions. And—well we had some just as the sport as could be wished for by a moderate wisher. The party, with six or seven guns, bagged within the space of about two and a half hours a hundred or more birds, all wing shots. Some very, very bad shooting was done, too. We then turned our footsteps homeward. But the great wonder was to us why the birds came there. We could see nothing for them to eat. They all scemed to be making for the barren strip, and would light there if allowed to do so. If you can give the reason of their constant visits you will greatly oblige a number of us.

I cannot fail to notice quite a laughable occurrence during our trip. Before retring to beds and pallets at Dr. G.'s house that night, Frank G— seemed somewhat anxious for the barren strip, and would light there if allowed to do

of steaming has given us all up, saying that a thief had come, had stored his game and would have stolen the horses too, but he had waked just in time to prevent it. He was positive in the assertion that he had his hands on his gun but a moment before it was stolen. We humored the joke for a while, but finally "let it out on him," after we found he had been waked by a cow. out on him," after we round he had seed when Frank never sleeps away from the party any more.

E. S. W.

NOTES FROM A VETERAN.

I HAVE been much pleased with the stand you have taken in favor of abolishing spring shooting, also with the numerous letters from your remarkably able corps of correspondents, all taking the same side of the question. In fact, there is but one side to it, "like the handle to a jug." Although the resolution I submitted to the recent Sports-

Although the resolution I submitted to the recent Sportsmen's Convention at Albany, recommending the adoption of
a clause prohibiting all spring shooting throughout the State,
in the proposed new game law, was voted down by a large
majority, every speaker, with one or two exceptions, admitted that the principle was right, and ought to be carried
out by legislative enactment, but if this State now took such
an advanced step without the concurrence of adjoining
States, we should lose our spring sport and sportsmen in
other States reap the benefit. But if a general law could be
passed governing all the States it would meet their hearty
approbation.

The reply was, let New York State do right and trust to

The reply was, let New York State do right and trust to the good sense of the other States to follow up the good example set by the 'Empire State.' It is almost certain that so good a law, a law that must commend itself to every thinking person, would not have to wait long for adoption by adjoining sister States.

The longer spring shooting is permitted the longer shall we have to wait for such fall and winter shooting as we had fifteen or twenty or thirty years agone.

It is agreed by some that as ducks, snipes, 'etc., are migratory birds, spring shooting does not tend to lessen the number of birds in a given locality in the fall. Such reasoning is hardly worthy of consideration, as it is a well-known fact that all migratory birds pursue about the same line of flight The reply was, let New York State do right and trust to

is narray wormy of consideration, as it is a weight now in that all migratory birds pursue about the same line of flight in the fall as in the spring, unless seriously disturbed while passing to their northern breeding places. Hence, every pair that is killed in the spring depletes the fall birds from eight to ten fold.

I have carried a gun for more than fifty years, but for the

Thave carried a gun for more than fifty years, but for the past fifteen years my shooting has been almost exclusively confined to ducks and grouse, and I know that duck shooting is far from what it was even ten years ago. "Breechloaders" are no doubt largely responsible for this, at least must share the responsibility with spring shooting.

I firmly believe that my proportion of birds to the amount of powder burned will bear comparison with most shooters, for I seldom take chance shots, preferring to kill rather than to wound birds and not get them.

I am much interested and greatly pleased with "Nessmuk's" communication in the Forest and Stieram of this week, as I have been in all his former letters, and most cordially recognize him as the "true sportsman." May the race increase. race increase

My favorite gun is a 12-bore, 30-inch barrel, and weighing less than 8 pounds. My charge for ducks is 3\forall drs. powder, 1\forall oz. No. 6 shot. Let no one turn up his nose at such a "pop gun," unless he can show a better record with his

cannon.

With it, loaded as above. I have bagged forty-five ducks in less than a day's shooting, nearly every bird killed on the less than a day's shooting, nearly every bird killed on the wing, and never more than two at one shot; and, further, of the forty-five birds, forty-three were picked up dead, and two had to be shot again by my boatman. In grouse shooting, when I see a bird on the ground, or in a tree, I prefer 'killing him on the spot," rather than to flush him and run the chance of wounding him by a snap shot, to die a slow death in some thicket. When I miss my game I always hope, as I did not kill, that I did not wound.

I have heard sportsmen use language when a miss occurred,

that would lead one to think it was a vile reptile or veno-mous beast they were contending with, instead of a beautiful winged creature seeking its own preservation. Vulgarity and cruelty are entirely out of place and not to be indulged in by the true sportsman; neither does be delight in slaugh-ter, or in mutilating his game by rough handling or other-wise

wise.

It will often, if not generally be found true, that many of the scenes we have been engaged in afford more real satisfaction in such review than we expenenced at the time of their occurrence.

Still I doubt if any of us regret the hardships, wettings, tramps, portages, and other numerous annoyances we have been subjected to, or even accidents, when not followed by regmanent ninux.

permanent injury.

Certainly such has been my experience during the more

permanent injury.

Certainly such has been my experience during the more than half a century that has passed since I caught my first trout or shot my first partridge. Oh, how well I remember that time. Since then I have in the pursuit of pleasure and of game been obliged to sleep on frozen ground, and once—and fortunately but once—hald to lie "three in a bed" in a Canack's cabin! I have been snowed under in Canada—have been to the bottom of Lake Ontario during a gale, and have gone ashore on a trunk, etc. And, although I never drank a drop of whisky or other stimulus, never took the slightest cold, nor suffered any lasting inconvenience from such exposures; and I would not that I had escaped any of these and other rough experiences.

Market shooters—may their race diminish—are a "law unto themselves," and not often aspire to the distinction of sportsmen, so I pass them by without remark—at least for the present—and will close by stating that I am greatly pleased to believe the trap-shooting at pigeons or other live birds by "game protective" societies, is fast falling into disrepute, and will soon be banished from these associations. The sportsmen in Michigan have set us an example that we would do well to follow. At their annual meeting, business of a higher order than trap-shooting engages their thought and time. And when the N. Y. State Association reach as elevated a position, it will receive and deserve more emisideration than now falls to its lot.

J. H. D. Pocgirgersig, N. Y., April 22.

Poughkeepsie, N. Y., April 22.

WYOMING GAME LAW.

Editor Forest and Stream:

Editor Forest and Stream:

I enclose herewith a copy of our game act. You no doubt will observe, as I have, imperfections. It is not perfect. Can an act be formulated that shall meet every contingency? We hope to be strong enough to break up the hide traffic. Our league will soon be organized in whose ranks you shall see the leading gentlemen, capitalists, and professional men in his Territory, as well as federal and territorial officials. We have worked faithfully and patiently to secure this much. It was the best we could do. Our people are developing and better measures will obtain in future.

Our Eastern friends should take up the measure our M. C., Mr. Post, has so persistently and religiously worked for in the Committee on Territories during the present session of Congress.

Congress.
You are making a gallant and meritorious fight. We need the united strength of the nation to break up the barbarous and inhuman slaughter of our noble game. We heartily endorse your effort and wish you God-speed.

CHEYENSE Wyoming.
M. C. BARKWELL.

AN ACT FOR THE PROTECTION OF GAME.

AN ACT FOR THE PROTECTION OF GAME.

Be it enacted by the Council and House of Representatives of the Territory of Wyoming:

SECTION 1. It shall be unlawful to pursue, bunt or kill any deer, elk, moose, mountain sheep, mountain goat, antelope or buffalo save only from August 1 to November 15 inclusive in each year, or kill or capture by means of any pitfall or trap any of the above named animals.

SEC. 2. It shall be unlawful to kill or destroy by any means or my pitfal groups age only from the light day of August to

SEC. 2. It shall be unlawful to kill or destroy by any means any ruffed grouse save only from the 15th day of August to the 15th of October in any year.

SEC. 3. It shall be unlawful to kill or destroy any colon or quail for the period of five years from the passage of this act, and thereafter only during the month of September of each year, or for any person to kill any ptarmigan, pinnated grouse, sharp-tailed grouse or sage grouse or sage hen, s only from July 15 to November 15 inclusive in each year, hen, save

only from July 15 to November 15 inclusive in each year, or kill in any one day more than fifty of any of the game birds hereinbefore mentioned.

Sec. 4. It shall be unlawful to kill any snipe, green shank tattler, godtwit, curlew, aroset or plover between the 1st day of April and the 15th day of August in each year.

Sec. 5. It shall be unlawful to kill any wild duck, brant or goose from the 15th day of May to the 15th day of August in each year, or at any time to trap, net or ensance any of the birds mentioned in this section, that it shall be unlawful to kill any fowl or bird that subsists on insects only as food at any time in each year. at any time in each year.

Sec. 6. It shall be unlawful to sell or expose for sale the

SEC. 6. It shall be unlawful to sell or expose for sale the carcase or any part thereof suitable for food of any of the kinds or species of animals or birds protected by this act save during the open season provided by this act and for thirty days next succeeding the time limited for the killing of such animals or birds. Provided, It shall be lawful to sell any colon or quail for the purpose of breeding, or the taking of the same alive for preservation through winter. And it shall also be lawful for any person to take alive on his own premises at any time and in any manner any of the animals or birds hereinbefore mentioned for the sole purpose of domesticating, or for scientifie or breeding purposes.

birds hereinbefore mentioned for the sole purpose of domesticating, or for scientifie or breeding purposes.

Sec. 7. It shall be unlawful for any person or persons to obtain by barter any green or untanned hide or hides of any of the animals mentioned in section one of this act, and furthermore it shall be unlawful for any corporation, company, person or persons to transport or have in their possession for transportation any green or untanned hide or hides of the animals mentioned in section one of this act after the expiration of sixty (60) days from the passage of the act. Provided, That none of the provisions of this section shall apply to hides in transit through this Territory from other States or Territories.

SEC. 9. It shall be unlawful for any person or persons to kill more of the animals named in section one of this act than he or they can use or dispose of for food. *Provided*, That nothing in this act shall deprive any citizen of this Territory from killing any game for the use of himself or family for food if killed within ten miles of the residence of

family for food if killed within ten miles of the residence of such citizen.

Sec. 10. Any corporation, company, person or persons violating any of the provisions of this act shall be deemed guilty of a misdementor, and on conviction thereof shall be subject to a fine of one hundred dollars for each offense, or in the case of a person or persons by imprisonment in the county jail for a period of not more than ninety days or both.

both.

SEC. 11. Any person or persons giving information of any violation of this act to the prosecuting attorney or any justice of the peace of the county in which such violation occurred shall be entitled to one-half of all such fines recovered. The other one half of such fines after deducting costs of prosecution shall be paid into the county school fund, and in case said informer shall not demand one-half of said fine, then the whole of said fine so received (deducting costs) shall be paid into the said school fund.

SEC. 12. That chapter fifty-nine of the Compiled Laws of Wyoming, being an act entitled an act for the protection of game and fish in the Territory of Wyoming approved December 1, 1869, and all acts amendatory, supplemental thereto, and all acts and parts of acts in conflict with this act are hereby repealed.

SEC. 13. This act shall take effect and be in force from and alter its passage.

and after its passage.
Approved March 9, 1882.

PHILADELPHIA GAME NOTES.

PHILADELPHIA GAME NOTES.

ONE of our professional shooters, while hunting snipe between Pennsville and Salem Creek, N. J., came across a great number of woodcock on the borders of the open meadows, in grounds that would have been considered excellent for snipe. This place was but a short distance from Salem Creek, and, as I was told, the birds were mostly started in pairs. We may, then, look for the hatching of a good crop of woodcock in that neighborhood this season. Salem Creek and thereabouts has always been a good ground for woodcock shooting in the summer.

I had the pleasure of meeting a friend of yours last week on his return journey from Milford, Del., where he had been enjoying some snipe shooting. A large bunch of birds shown me by Mr. Probst proved he had fallen in with the snipe; but I was sorry he had not tried the Milton grounds, where he would have had the shooting all to himself.

For many years back our Delaware River rail pushers, who furnish us with all the sport we enjoy in September on the reed flats, have used the clinker-built skiffs peculiar to the Delaware. The boat appeared to be beyond improvement for the purpose it was made for, being round-bottomed, very light, and easily propelled through the reeds where the water allowed rail shooting at all. Last year at Gloucester, N. J., there appeared on the marshes one or two flat-bottomed boats where pushers were able to put them where the old clinker-built bestied sould not get—that is, into much higher ground among the bushes, yellow flowers, and cat-tails, and consequently many more rail were boated by the shooters in these flat-bottomed dinkeys. The professionals at Gloucester and other points along the river have this spring taken the hint, and many boats of the latter sort are being built, fifteen at least at Gloucester, five or six at Bridgeport, and as many at Marcus Hook.

If these boats will take us to where there are more rail, estatish we want them, but we have the the secretic. Marcus Hook.

If these boats will take us to where there are more rail, certainly we want them; but we hear that they are terribly cranky to stand up in and shoot from. We doubt if they will be used for anything else than rail shooting; and the old clinker-built craft will be the stand-by for general work on

clinker-built e

the Delaware.

Lust autumn the majority of our sportsmen abstained from quail shooting owing to the severe "weather test" they had undergone and the consequent searcity of birds. We hear of the good effects of this all through our own State as well as in New Jersey, Delaware and Maryland. Quail are whistling their "Bob White" in many places where but few birds were known to have been left over, and we may expect fair if not good shooting next season, providing we don't have very wet weather to drown or destroy the young birds.

Homo.

Homo.

A Last Word.—Warrentown, Va.—"II. P. U." says that he is nothing if not a logician. Andhe proves I am no sportsman. Alas! and alack! I am ruined and undone. "H. P. U.," take back those cruel words, I implore you, and do not by the force of your relentless logic crush me to the earth. I am a young man yet, not being old enough to havefit in the late wah, and had a future before me; but now all looks black. I have given away my dogs, have cast aside my guns forever, for what joy has life for me now? Somebody once asked Judge Jerry Black of Pennsylvania, the most graceful writer and finest rhetorician in America, why he did not write a history of the famous men of the times, of whom he had such an intimate acquaintance and could describe with the pen of a master. The old man eloquent paused for a moment, and then replied, as he twirled his silver smuff-box between his thumb and forefinger, "Well, I did have that lidea, but then some fool would be sure to catch me up."—Chasseur.

Iowa.—Carroll City, Iowa, April 27.—Pursuant to call, a meeting of the sportsmen of Carroll City was held in J. W. Hatton's office last night, and it was unanimously resolved to form a gun club. The following sportsmen, all of them keen sportsmen and well known to the sporting fraternity, were elected officers: E. M. Parsons, President; O. A. Kentner, Vice-President; Frank C. Dennett, Secretary, and Win. Artz, Treasurer. The shooting has been very fine here. The duck season, now closing, has been the finest for ten years. Young sportsmen have won their laurels, and old ones have carried home bigger gamebags than ever. More anon.—Venator.

Quebec Game Law.—A bill is now before the Quebec Legislature to amend the Act for the protection of game, The principal changes provided for arc as follows: Deer, moose and caribou—present close season, Ist February to Ist September; proposed close season, Ist January to Ist September; proposed close season, Ist January to Ist September. Wild ducks, gees and swans—present close season, Ist May to 1st of September, west of Three Rivers; proposed close season, Ist May to 1st of September, east of Three Rivers; proposed close season, Ist May to 1st September throughout the Province. Partridge—present close season, Ist March to 1st

September; proposed close season, 1st January to 20th August, Hares—(snaring permitted by present act) to be prohibited. By the new act all persons who shoot are required to take out licenses; non-residents of the Province to pay \$20 for a license to hunt any kind of game in each district; residents to pay \$1 to \$2 for licenses to shoot in each district; residents to pay \$1 to \$2 for licenses to shoot in each district; residents to pay \$1 to \$2 for licenses good for the whole Province for three months, \$50. The following are the changes proposed and asked for by the Fish and Game Protection Club: 1st. That the close season for deer and moose be altered so as to commence on 1st January, instead of 1st February (caribou to remain 1st February). 2d. Close season for partridge to commence 1st of February, instead sts March. 3d. Close season for black duck, mallard, wood duck and teal to commence 1st March or even 15th April, instead 1st May. The club consider it of the utmost importance that the shooting of ducks just enumerated should be duck and self-flag. The club consider it of the utmost impance that the shooting of ducks just enumerated should prohibited in the spring, because they come here at

Woodcock in New Jersey.—Hacketstown, N. J., April 26.—Last evening when a friend of mine returned home he found the children playing with two young woodcock. He told the children to take them back to the place they found them. They did so, and said they did not see the old birds, but heard one making a noise just like the young one. These birds were found on the side of a mountain in a growth of chestnut sprouts of about fifteen years of age, and distant from any water or swamp about one-half mile. I suppose from this that they breed on high ground and fly to and from the feed while breeding, and after bringing forth the young move to the swamps and remain there until the mild dle of July or the first of August, and then—"Where are they?" Except an occasional bird in the cornfields there are none to be found until the fall flight arrives.—DALY.

Troy, N. Y.—I have protected my farm of 176 acres from trespassers by taking advantage of that provision of the game law of this State (New York) which allows the owners game law of this State (New York) which allows the owners of land to advertise for three months in one of the county papers an intention to propagate game of fish on the land describing the land in the advertisement and posting notices (warning of trespassers) every forty rods around the land.—R. M. Hasdrouck.

THE OMO HAWK INDUSTRY.—Hawk killing is becoming quite an industry in Ohio since a bounty was offered for their heads, and large numbers have been brought into the Auditor's offices—some of the carcases quite odorous—to have certificates made out. Every time the county commissioners meet, they allow a lot of bills for killing hawks. I made way with seven of the "varmints" last summer.—Moz-AM-BUCE

Pennsylvania Association.—New Brighton, Pa., April 25.—The annual meeting of the Pennsylvania State Association for Protection of Game and Fish, will be held at Meadville, Pa., Tuesday, June 13, 1882, at 2 o'clock. No postponement for any cause. The secretury is Dr. D. Mc-Kinney.

Iowa.—Keokuk, April 25.—Messis. Brown, Hewett, Hurskamp and Steele, crack shots of this place, killed 232 jacksnipe on grounds near here one day 1 ist week in less than four hours' shooting, and a pelican which measured nine feet from tip to tip of wings. It was the largest I ever

Woodford's, Maine, April 19.—Wild greese were flying north over here last night in very large numbers; more than have been seen for years.—Mac.

Sea and Biver Hishing.

HOW HE WENT TROUTING.

HOW HE WENT TROUTING.

WHEN the cold, raw winds of March have ceased to sweep the earth in their customary drying and settling course, when the balmy air, sunshine and showers of latter April have come, and the bithesome squirming worm hath risen within easy reach of the eager spade, then our amateur, all impatience to take another step in the gentle art, sets about for some kind friend to lead him to the spot where awaits his first trout. Many a one can bring to mind at once some chap who knows all the roads and can take you to a given point quicker and easier than any live man. Knows all the good brooks in the State and out of it perhaps. He always has some place abounding with trout where he is sure no one else fishes. These great secrets are not divulged for mere friendship's sake. However, there are some that are always willing to lend a helping hand, remembering how they in the novitiate leaned upon their more learned friends.

always willing to lend a nearing name, they in the novitiate leaned upon their more learned friends.

Let us suppose our amateur hits upon one of those who find pleasure in befriending others. A day is set and an hour appointed, which none too soon arrives. A most beautiful morning with a cool, fresh movement of the air hailing from about west southwest. The sun is not yet risen, but in the eastern sky shading upward from the deeper glow on the horizon, is that halo which tells that the great giver of light is close at hand. How the bahry air of spring's early morn deepens into positive perfume as the open country is reached and the vapors of the factories are left with the dwellers in the city.

deepens into positive perimine as the solution and the vapors of the factories are left with the dwellers in the city.

"Where will you take me to-day, friend?"

"I hardly know. I have been thinking of a number of brooks to which this road would lead us. You won't be disheartened by a little hard work, will you?"

"Oh no, I think not."

"Well, then we will try the cedar swamp brook, one of the main tributeries of Queens River, perhaps the largest."

"What brook is this we are now crossing?"

"This is known as Fry's Brook. It adds its waters to Hunt's River. See how it crosses and re-crosses the road, and how it runs along the side of it as if loft to leave its company. Within a year I saw a trout hooked here as I was riding by. There, you see it leaves us at last and wanders away through the meadows to join the river in its flow to tide water. You would hardly look for trout by a roadside, yet as I tell you, they are sometimes taken here. In fact, all of these little brooks and ponds have had, and some still have, a fair sprinkling of trout. Over the top of this next hill I will try to show you where a most famous stream

has its course. Therel do you note that low-lying land on our left backed by those heavy pines? That is where the stream called 'Put Gurner's Bog' flows, called so, I believe, from a farmer of that name who once owned the land through which a portion of it flows. In this old tumble-down barn friend S— and I oft have baited our horse and taken our 'noonday rest.' Here comes the little Nichols Brook leaping down that rugged hill, surging itself under the bridge and through the meadows to meet 'old Put' in the swale below. You ask what place this is—I don't wonder, three or feat houses don't make a town, do they? Yet this is Scrabbletown, and this brook we are crossing will presently flow through 'Put's Bog.' Now we are on'the road known as Stony Lane; well named, is it not? Our cedar swamp brook crosses this road. I suppose you wish yourself there."

"I am not impatient, the road to me is new and the surroundings very pleasant. Tell me, have you ever taken many trout where we are going?"

"No, not many large eatches, still I remember some very pleasant trips. My father, who first led me to the spot, has taken many large and handsome fish. That was many years ago, and the like I fear will never be known again.

"Well, partner, here we are at last! We will tie up to this pair of bars. Throw that light blanket on the mare while I get her a wisp of hay to nibble while we are gone. Take your rod, reel and bait. We will cross this pair of bars on our right and follow the cart path up stream a bit to where the brook is spanned by three or four large and massive stones. Ere you jump from the top rail of that barway, look down the road to where the brook crosses. See where it flows under the rustic bridge and where it issues and slently spreads out into a broad and noble basin. See where that fallen pine with its accumulation of drift wood has partially dammed the stream and thus formed a cool and almost hidden retreat for the wary trout. We cannot linger longer. The sun climbs fast and we should be fishing now. This walk

which surrounds us."

"I agree with you; let us not abuse the privilege."

"This, my friend, must be the bridge of which you spoke."

"Yes, this is the place; now let us get to work. Look where the whirling eddy loses itself in that deep hole at the foot of you noble pine. If there be no trout there then I am all astray.

"Joint your real with the

foot of you noble pine. If there be no trout there then 1 am all astray.

"Joint your rod with the guides in line and the reel underneath. A three foot leader is long enough. Select a worm of moderate size, red and hard. Spit it on your earlyle hook at about its middle, slide it on a little way and bring out the hook. Select a second like the first. Impale it as before, but let this one cover the point of your hook. You now have four squirming ends. Drop them gently in the water where it comes from under the bridge. Aid your bait carefully along until the current carries it naturally into the pool. Note that curve in your line where the current has carried out the slack. Your bait is either fast in a root or a trout's mouth. Wait a minute and then carefully reel in the slack of your line until it runs straight to the point where it is fast. Do it gently, so that you may not disturb your fish if you have one. That's good. Now tighten your line a little and perhaps you will feel answer. There I what was that tremor of your line? Did you not feel it to your shoulder? Give him a little line and another minute. Now straighten until your line comes taut, and if you feel the fish snub him once sharply, just strong enough to set the hook.

"What wes it that shot across the pool? What is it that

straighten until your line comes taut, and if you feel the fish sub him once sharply, just strong enough to set the hook.

"What was it that shot across the pool? What is it that has so quickly transformed this quiet pool into a boiling spring? Hold him hard, don't give him an inch of line, That barrier of brush and driftwood would prove a Waterloo to your hopes should he reach it. Take in line whenever possible. Let the spring of your rod do the work. Another plunge or two and I think you have him. There, guide him to your right to that shallow water, and draw him gently out on the pebbly shore. Break his neck at once for humanity's sake if nothing more.

"About three-quarters of a pound I imagine he weigha; a good trout for your first one. Rest the pool for a luttle, it may yield you another. Should it not, take the stream for your guide and meet me at the wagon. Meanwhile I will try them further down. I leave you then unto your own resources. Remember that patience is one of the cardinal virtues which lead to the angler's success, and carry your rod ahead of you when going through the woods."

"Adieu, my friend, I will endeavor to follow your advice. Now indeed am I left to my own capabilities, and I doubt if there is another fish left in this pool. Therefore I will at once away. This brush is very thick and there is my line caught in the limb of that cedar. Now I have it all right. What was it my friend said? Carry the rod ahead? That is better; now I can see what I am about. Casar! I most broke my tip that time trying to push that big cedar over. Here is a little open spot where I can see the brook. I will try them here. I'll drop in carefully; now the current moves it along; it stops. I have one now! Let me feel him once. Oh, dear, it's the root of a bush. I can see the top move when I pull. I must have it out, however. 'Swish,' solid as a rock. 'Swish,' there goes my leader! Well, well, uever mind, here is another. I think I won't fish any more until I find more open water. It is as much as I can do to g

I'll drop it in right here and let it run down yonder under those bushes.

"Whew! this is a bite surely. Come out, my beauty! At last I have one of my own, no coaching here. This is just grand! How I do enjoy it! Nothing that I have ever entered into at all compares with it. Now for another one. I see a spot where there must be——By jimminy! I saw no hole. Uugh, how cold the water is. I am wet to my hips. I must get out of this at once and dry myself before I catch cold. I'll hurry along and find a cart path as soon as possible. How hot it grows. The sun beats relenibesly upon my head wherever the trees break apart enough to admit its rays. The brinrs wind about my legs piercing to the hide, as if determined to hold me back.

"Oh! that infernal root; I thought! I stepped high enough; yet you have brought me to the earth. My rod—where is the tip? Alas! 'tis broken. Will my troubles never cease? Is

there no path in this eternal swamp? I'll not give up. there no path in this eternal swamp? I'll not give up. I'll not call to my friend; there must be a path soon. It seems a little lighter now. Verily, here is a cart path in good faith. There stands the horse, and there by the pool, below the bridge, stands my friend quietly adjusting his tackle for a new cast. How cool and contented he looks."

"Ah! partner, what luck?"

"Sorry luck, my friend. I am all scratched and torn. I have fallen in the brook. I have broken my rod and I am so tired."

so tired."
"Well, well, cheer up; let us eat our lunch, mend the rod, and perhaps try again; or would you rather hitch up and slowly drive towards home, eating our lunch as we go? We can stop somewhere for another east when you are rested."
"I think I would prefer the latter course if you have fished

here enough."
"All right! I'll hitch up while you peel off your boots and

"All right! I'll hitch up while you peel off your boots and put on those dry socks.
"Did you catch any?"
"Yes, a few, six, I think."
"Good ones?"
"Fairly good—four about the size of yours and two smaller ones. Did you get none after I left you?"
"I got one more; then I fell in a hole and gave it up."
"Sorry for you; fisherman's luck, ch? If you have your socks on, jump aboard and we will be off.
"Bid farewell to the Cedar Swamp and its treacherous bogs. Do not regret your visit. I have no doubt you will one day Do not regret your visit. I have no doubt you will one day return to this spot, and with your companions laugh at the mishaps of to-day."

BLACK BASS NOT WANTED IN NEW HAMPSHIRE.

BLACK BASS NOT WANTED IN NEW HAMPSHIRE.

A FTER putting myself to some expense of time and trouble as to stocking a small lake in New Hampshire with black bass I have given up the project. To show why I have done so, and for the interest of anglers generally, I enclose a copy of a letter from Samuel Webber, Esq., of Manchester, N. H. As the letter is from a gentleman who has had great experience as one of the Fish Commissioners of his State, and is to the point, you may like to publish it, as it is used with his permission. Dublin Pond and Monadnock Lake are the same.

"In reply I must say that the Fish Commissioners have already begun stocking Dublin Pond with land-beked salmon, and propose to continue placing varieties of the trout family in it. They have voted to place no bass in any natural trout waters, and the Legislature voted last year to allow the introduction of no fish in any waters of the State without the permit of the Fish Commissioners, under a penanty of \$100, and the commissioners will certainly never consent to the introduction of bass into Dublin Pond. The commissioners have stocked 123 ponds in the State with bass, and in most cases the result has been most unsatisfactory. The bass destroy all the other fishing and then clear out down the streams themselves.

"There is now good bass fishing in Sunapee Lake at times, but it is very uncertain, and the "exodus" of the bass down Sugar River is astonishing. Lake Massabesic, near Manchester, was stocked about the same time as Sunapee, and great complaints are now made that no bass, or any other fish, can be caught, except pickerel, through the ice in winter, but the Merrimac River is getting to be full of bass, which have gone down from the lake. There is not as much of a "bass fever" in New Hampshire as there was a few years ago.

"While bass fishing may be had in Sunapee, Winnipesau-

of a "bass fever in New Hampsine as facts which years ago."

"While bass fishing may be had in Sunapee, Winnipesaukee and Milton lakes, it is a very uncertain matter in a hundred other waters that have been stocked. There are plenty of them in both the Merrimae and Connecticut rivers, but catching them in those rivers is another matter. They probably find plenty of food naturally, and are very capricious about taking the hook. If the Dublin people would enforce the law and prevent the destruction of their trout on the spawning beds. I have no doubt that Monadnock Lake would restock itself, for it is the destruction of the spawners that is ruining all our fisheries, both sea and inland. Look at the lobster fishery for an example."

Charlestown, N. H. Samuel Webber.

ANGLING IN SOUTH CAROLINA.

ANGLING IN SOUTH CAROLINA.

TISHING is now in order, several large bass (large-mouth black bass) have been taken during the past three weeks. The catches as a rule have not been large in numbers. The cold wave of last week, also the heavy rains from time to time, have influenced the fishing. Mr. J. Giles of this place is probably the nost successful and scientific angler; and has taken seven and nine-pounders. He has recently made a most complete fish-trap or box for keeping bass alive after being caught; it is portable and handy.

The run of shad in the Savannah was not extremely heavy this season; the fish were high in price, and not great in size. I am trying to determine if there is a difference in the flavor, or a superiority either one way or the other, in shad of Southern waters. A gentleman here says that the flavor of the Savannah river shad is the finest in the world. This may or may not be an exaggeration. I am hardly prepared to give an opinion, although, so to speak, I was brought up on Hudson River shad, my birthplace being near that river, and for years a resident in close proximity; still I am not capable of judging as to the flavor of the two runs of shad; I only remember the Hudson River shad were all that could be desired in those days; were plenty, consequently cheap. It would be necessary to have the fish of both rivers served at one and the same time, cooked in the same style; "planked" for instance, with the necessary side-dishes; a difference in flavor might be found, but I doubt it; my numble opinion is, that a "planked" shad, no matter from what river, should be taken thankfully.

Well, I wonder if Oscar Wilde has enjoyed the felicity of 'planked" shad; he will give us blasted Americans credit for knowing how to cook at least one fish asthetically, even it we do not appreciate sun-flowers, lilies and such.

Green peas have been plenty for the past four weeks, fresh and fine; and now strawberries are being served, in fact have had them for the past two weeks; other garden "sass" will so

where summer is simply a streak of sunshine between two snowstorms, and not much of a streak at that; but I must confess when our streak of sunshine fairly begins, I would like to be among the delightful lakes of Maine.

GRANITEVILLE, S. C., April 27.

DICK SWIVELLER.

CONCERNING CLAM CHOWDER.—In the course of an interesting article on clams and chowders, the London Telegraph avers that the Romans ate the clam of classical times au naturel, with oxymel sometimes in place of vinegar, or stewed with oil, sweet wine, and appeper, and after noticing the absence of a recipe for chowder from Mrs. Hale's book, tells how one is to be found in the "Cosmopolitan Cookery" of Monsieur Urban Dubois, only he treats it as a "potage." "Clam chowder soup," the German kaiser's "chef" tells us, is made from the chopped flesh of clams placed in a well-buttered stew-pan, and "accommodated" with onions blanched and mineed, a bunch of aromatic herbs, sait, pepper, nutmeg, cayenne, and mace, the whole moistened with a sufficiency of wine and fish broth. Prior to serving, the soup is to be thickened with a handful of bruised crackers and fortified—for a mess of five dozen clams—with a bottle of Rhine wine. "This," says the Telegraph, "is nearly but not quite the genuine article. Monsieur Dubois has omitted an integral component of chowder, the pork. To find the 'norma,' or original basis of chowder, we must go back to the venerable Mrs. Hannah Glasse, in whose culinary 'Novum Organum,' and under the heading of 'A Cheshire Pork Pye for Sea,' to which she specially directs the attention of master mariners, there will be found the real foundation of chowder. "Take,' says Hannah, 'some salt-pork which has been boiled; cut it into this lices; an equal quantity of master mariners, there will be found the real foundation of chowder. 'Take,' says Hannah, some salt-pork which has been boiled; cut it into thin slices; an equal quantity of potatoes, pared and cut thin; lay a layer of pork seasoned with pepper and a layer of potatoes, then another layer of pork, and so on till your pye is full. Then add more pepper; lay some butter on the top and fill your dish about half tull of soft water. Cover up close and bake in a gentle oven.' 'After declaring that this appetizing dish was for generations pratronized by England's tars, anon as "a sea-pie," anon as "lobscouse," the Telegraph insists, prior to giving a somewhat idealized and impossible description of a New England clambake, that the dish 'was popularized as chowder on the shores of New England, and with the addition of the sand-clams, which were so amazingly popular, became clam chowder." Chowder is from chaudiere, the pot in which the appetizing mess in question was cooked.

Other Dead Fish.—Until last week it was not known whether the vast tract of dead fish floating in the ocean contained more than one species, the tilefish, to which we have referred for several weeks past. The same vessel which brought in the tilefish which was shown at Blackford's last week, also brought two specimens of a deep sea fish, which Mr. Blackford sent on to the Smithsonian Institution. Professor Baird writes: "The specimens of redfish from Capt. Gibbs came safely to hand and proved to be as I expected, one of the constant companions of the tilefish on the deep sea grounds. It is the Peristedium miniatum, a species of gurnard, of which this is the first American representative, of the well-known Mediterranean form. This shows that the calamity to the tilefish occurred on the eastern edge of the continental plateau." The fish in question was described by Professor Goode, and is one of the Triglida, which family contains those fishes popularly known as flying robins, sea robins, gurnard, etc. The fish brought in are closely related to the flying robin. Deadployterus volitans, a species which can fly short distances in the air. This discovery of other species among the dead ones shows that it is more than probable that the fish killed were not all tilefish, and that it was not an epidemic confined to one species. It is more likely that some convulsion of the bottom killed all the fish then upon it in the district affected. it in the district affected.

it in the district affected.

New Hampshire Salmon,—Charlestown, N. H., May 1, 1882.—Editor Forest and Stream: I wrote you a week since relating to a salmon taken at Londe, April 23, and now have to say that said salmon was sold to one of the hotels in Londe, where it was cooked and eaten. One of the gentlemen who assisted in the final disposal of the fish informed me that it looked and tasted almost exactly like brook trout, the flesh being almost white, as is the case with the trout of the Merrimac River, and very delicate. This was probably due to the food which the fish had subsisted on in the upper waters of the river during the winter. Another large salmon has been seen since then in the canal at Manchester, N. H., but had not been taken on Friday last, and this one, like the one at Londe, must have come down stream and been on its way back to salt water. Don't you or the readers of Fohest and Stream believe one word of the sayings of some chronic grumblers at Manchester, such as were reported at the meeting of the Fish and Game League. The fishway is satisfactory to the salmon if not to them, as is proved by these fish being taken or seen on their return down stream.—Sam. Webber.

FISH LAWS OF CANADA.—Those of our readers who fish in Canada will do well to observe the following, which has been printed and distributed by means of handbills, by Mr. W. F. Whitcher, Commissioner of Fisheries of Ontario, Pickerel (pike-perch, wall-eyed pike, doré, etc.), maskinonge and black bass cannot be taken from the 15th of April to the 15th of May. Speckled trout, brook, or river trout cannot be taken from Sept. 15 to May 1. Salmon trout, or lake trout, and whitefish may not be captured from the 1st to the 10th of November. Net or seine fishing without license is prohibited. Nets must be raised from Saturday night until Monday morning of each week. Nets cannot be set or seines used so as to bar channels or bays. Indians are forbidden to fish illegally, the same as white men. Each person guilty of violating these regulations is liable to fine and costs, or, in default of payment, is subject to imprisonment. No person shall, during such prohibited times, fish for, catch, kill, buy, sell or have in possession any of the kinds of fish mentioned above. tioned above.

NETS IN LAKE CHAMPLAIN.—There is quite an excitement in Whitehall and along Lake Champlain just now, caused by the appearance of Game and Fish Protectors S. J. Palmer and John Liberty, just as the net fishermen had got their nets placed in the water for their spring work. In a talk with Mr. Palmer last night, he said that they had taken a large number of nets, and there were still many more to be looked after. He says the Vermont shore is lined with nets, and the Game Association of Vermont has said that they would be looked after. Many of the fishermen from the New York shore, on hearing that the fish protectors were around, moved their nets across the lake, and it is quite a

hard matter to find them. The water is muddy and very riley, so it is not possible to see a net pole if it is two inches under water. Mr. Palmer said the fishermen secrete their nets by sawing the poles off below the top of the water, and they are found only by dragging with grappling-irons. Mr. Liberty said that Palmer and himself had over one hundred nets stored between Whitehall and Rouse's Point, and some very valuable ones among them. Liberty has gone to the north end of the lake and Palmer is raking the south end. Now, if the Vermont authorities will help them, there would be no doubt but Lake Champlain would soon be free from nets. The question was asked Mr. Palmer what was going to be done with all those nets? He said they had not decided yet, but would probably burn them. There have been no arrests made yet, because it is a hard matter to find out the owners of nets. I am very fond of fishing with rod and line, as are many others here, and live in the edge of Yemont, near Whitehall, but can have no sport because the nets take all the fish. The authorities, or game constables, are doing their duty in New York, and my object is in writing this to see if it would not stir up the Vermont game officers and clear the Vermont shore of nets, the same as New York has done.—Champlain.

York has done.—CHAMPLAIN.

BLACK BASS AND ENGLISH ANGLERS.—The English opinions about black bass quoted in your paper from the London Field seem to me admirable specimens of the usual ignorance and arrogance of Cousin Bull when in America. One writer thought bass fishing poor sport because they "walloped about" and got rid of five hooks at once. Probably his bream and barbel at home behaved more quietly and with less republican rudeness. But "R. U." had "splendid sport" among the suckers and great lake trout, whose slow and heavy movements were appreciated by this barbel-fisher. The other writer, "Koorb," also depreciates the game qualities of black with the pronounces them inferior to what he calls the "warlike pike," perhaps the pike-perch, which is common a Alexandria Bay, the scene of this angler's exploits, a stone, heavy-pulling fish, but with little of the dash of the bas. There is no dispating tastes, and if Englishmen prefer bar belt to bass, it is all right. Such, however, was not the estimate put upon the black bass by Herbert and Gillmore, who were really anglers.—C.

Tennessee Fish Notes.—Mr. Furman and party 666

were really anglers.—C.

TENNESSEE FISH NOTES.—Mr. Furman and party did Jones's Creek last week and had good sport. The market is badly supplied, notwithstanding the infringement of the laws, because this is a nucleus of sports, and they will not only not buy illy-gotten fish, but will unscrupulously reper them. General Ira P. Jones, one of our most noted angles may be thrown off by an excess of labor caused by the Buner's beginning a morning issue, or else he will get his 'Waltonian' arms together and startle the natives by his prowes My woodpeckers, of which I have for five years given in Forest end Stieram an account, returned this morning but being unmolested, the old hole is being refitted by them this time without the interference of bluebirds or others English sparrows have appeared in our midst, much to the disgust of the levers of song and useful birds.—J. D. H.

PLANKED SHAD.—We do not know of but one fish that "planked," although there may be more. On the lower Delware River the shad are often so cooked, especially about Glor cester, N. J. We believe that a chestnut plank is preferred and the more shad that have been nailed on it the better Those who cook them for parties from Philadelphia are elsewhere value their old planks highly. The plank is hear and the fish nailed on and set before a great bed of coals are roasted. Sometimes a bit of salt pork is put on the fish Cooked in this way and brought to table on the plank, its weet and very juicy. No doubt other fish would be good treated in like manner. A correspondent inquires if trocan be prepared in this way. PLANKED SHAD .- We do not know of but one fish that

BLACK BASS IN LAKE ERE.—Since seeing and reading my first number of FOREST AND STREAM I have never mised a number, and could not keep house without it. I am often amused while reading the stories of the bass fishermen. Some of them, coming from men more capable of handling lapen than the writer, would find themselves "behind so that the property of them to the forest than the writer. pen than the writer, would find themselves "behind lighthouse" taking bass. It is no unusual thing to take to six-pounders here, in and out of the bay, by trolling, slifshing, or off the harbor piers with rod and spoon. An thing of a fisherman can take from ten to fifty in a day fishing, in season.—Log Driver, (Erie, Pa.)

IN New Jersey the open seasons are: Salmon trou-March 1 to October 1; brook trout, March 1 to October 1 black bass, June 1 to November 1. The law prohibits lines or nets in streams stocked by the State with game fra prohibits also any device that will interfere with the fish ending streams

First Swell: "I never did like 'May,' not nearly a pretty as 'Mary,' wonder they don't change the name of the month to 'Mary.'" Second swell: "Clevaw ideaw! Makawystaws good to June, you know."

awystaws good to June, you know."

THE WYOMING COMMISSION.—An act passed by Legislature of Wyoming Territory and approved March 1852, provides that the Governor shall nominate, and by with the advice and consent of the Council, appoint six zens, one from each organized county in the Territory, we shall constitute a Board of Fish Commissioners, and shall heli office for two years and until their successors are pointed. The Board shall have power to make by-laws its government and shall choose one of their number as claman. They shall receive no compensation for services, shall be reimbursed for necessary expenses. They shall entire control of the public waters pertaining to the coin, propagation, cultivation, distribution and protection fish. They may take fish at any time for the purpose of ture or scientific observation and shall give attention to enforcement of the laws for protection, and shall make official report of their operation. The County Commisare authorized to appropriate \$100 per year to be used by Board in the counties so appropriating, and there shall \$1,500 appropriated out of the Perritorial funds. Then appointed commissioners are: Dr. M. C. Barkwell, President Superintendent; Otto Gram, Secretary; Hon, E. W. Futt, Hon, P. J. Downs, Hon, N. L. Andrews, Hon, T. Quinn.

RAINBOW TROUT ABROAD.—Mr. E. G. Blackford cently sent 10,000 eggs of Salmo iridea to France. He tained them from Prof. Baird. He has also ordered a los some other parties, on his own account, from Mr. Wood of California. On Saturday last Professor sent 10,000 in steamer Oder to Mr. von Behr. President of the Deutsch Fischerei Verein. They came from the ponds of Frank Clark, Northville, Mich.

Hishculture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

ON opening the meeting on the second day the president remarked that he was glad to see Mr. Wilmot present. Canada had not been represented in the association for some years, and he did not know but they had lost interest in the meetings.

Mr. Wilmor responded that it was not through a lack of interest that neither Mr. Whitcher nor himself had attended the meetings, but the fact was that it was always a busy time with them when the meetings were held, Parliament was then in session, and they had much important business on hand.

The following persons were then proposed for membership.
Charles Pease, Cleveland, O.; W. H. Truslow, Cazenovia, N.
Y.; T. J. Jessup, Virginia City, Nevada; W. E. Garretta, New

The following persons were then proposed for membership: Charles Pease, Cleveland, O.; W. H. Tuslow, Cazenovia, N. Y.; T. J. Jessup, Virginia City, Nevada; W. E. Garrett, New York city.

The Prissident There has been a suggestion made that the next meeting of this association be held in Boston, and perhaps this would be as good a time as any to agitate the question and get expressions of opinion concerning it.

Mr. MATHER—One of the first questions to be considered is, would it be to the advantage of the association to meet there? If it would, then it would be most desirable to do so. It will be recollected that we met one year in Philadelphia, and obtained many new members from that city. These members did not stick to us. One or two came to New York at the next meeting, but finally all dropped off. Our main object should be to increase our membership, as it broadens our usefulness.

Dr. Huddent of the meeting was held near the time of that of the New England Fish Commissioners, there is no doubt of our laving a good attendance, and I would favor it unless it would prevent a large attendance from New York. I would like to hear from other members on this subject.

The Prestident—I would like to hear from Mr. Wilmot on the question of meeting in Boston.

Mr. WLIMOT—I do not care to express an opinion. Mr. Whitcher and myself can attend at either New York or Boston equally well. I feel like apologizing to the association for my long absence, and hope to meet with them oftener in future. Privately, I think New York the best place, on account of the spening of the trout season and the splendid display of the salmonidae which Mr. Blackford has at this time. As I said before, however, our Parliament is in session at that time, and it is difficult to leave.

Dr. Huddent as the trout opening is a great attraction it might be heard to say what is the best place, on account of the submonidae which Mr. Blackford has at this time. As I said before, however, our Parliament is in session at the time of our meeting, but as th

is more attractive in May than in April, if we leave out the trout show.

Mr. Evarts—It would be better to have the meeting earlier in the year than later. People like myself, who live in the country, find it easier to leave in February or March.

Mr. BLACKFORD—We formerly ha I a large attendance from New England and we should strive to regain it. Being a continental association we should strive to regain it. Being a continental association we should spread over more ground, and yet the question arises, would we be benefitted by going to Roston! The trout exhibitions spoken of have grown from the association, and have in sort become part of it. As for myself any other time would be more convenient for me, and I think for fishculturists generally. They are now engaged in distributing fry and are very busy. I think the time should be changed, whether the place is or not, and, for one, will favor Boston.

Mr. MATHER—If we can get an accession of members from the East, and hold them, then I would favor Boston also, but our Philadelphin friends deserted us.

The PRESIDENT—No doubt we would have a large gathering in Boston and our meeting would be a benefit to fishculture.

Dr. Huddon—I would be desirable to bring all Fish Company of the control of the

Ing in Boston and our meeting would be a benefit to fisheulture.

Dr. Hudson—It would be 'desirable to bring all Fish Commissioners together and have the meeting the day following the meeting of the association. We formorly had meetings of commissioners under Prof. Baird, but have had none since 1876. I do not know how far it would be practicable to bring the commissioners of the West in with us. It should be started by Prof. Baird in order to make it successful.

Mr. SMLEY—Only a year ago Prof. Baird had circulars printed asking for a meeting of all Fish Commissioners, but they were never sent out for fear that it might not 'be practicable to obtain such a meeting. Perhaps the Professor might consider that in connection with this association a meeting of the different Fish Commissions could be successfully held. In regard to the Boston meeting it appears possible to get the attendance of Prof. Baird and his assistants, as he is at Wood's Hall during the summer.

Mr. BLACKFORD moved that the matter of the next meeting be referred to the executive committee, with power to arrange the time and place of meeting. Carried.

Dr. Hudden and have a meeting of the Fish Commissioners of the different States, to take place about the time of our next meeting, either just before or after it. Carried.

The following paper was then read:

The following paper was then read:

CHANGES IN THE FISHERIES OF THE GREAT LAKES DURING THE DECADE, 1870-1880.

BY CHARLES W. SMILEY.

DURING THE DECADE, 1870-1880.

BY GHARLES W. SMILEY.

A somewhat wide-spread impression exists in the lake regions that the fisheries of the Great Lakes are decreasing. That the number of pounds of fish annually caught is less than formerly is not true, and yet this instinctive impression is doubtless correct if formulated differently. That the resources are diminishing and liable to fail us is true.

From the statements of Mr. J. W. Milner who visited the fisheries in 1871, and whose report was published by the United States Fish Commission, and by comparison with the investigation made in 1879 by Mr. Ludwig Kumlein under the auspices of the Fish Commission and tenth census, the following facts appear:

I. The total number of pounds of fish obtained from the Great Lakes in 1879 was equal to or greater than the yield of any years in the first part of the decade.

II. The apparatus for capture has increased in effectiveness was produced by the introduction of their meshes in nets, the addition of steam tugs, the increase of pounds, and very great increase in the number of gill nets in use. The number of fishermen also increased.

III. The average size of the whitefish and trout taken greatly diminished during the decade.

IV. A considerable number of valuable fishing places became seriously or wholly exhausted. New places were sought out and the supply thus kept up.

V. From these few facts the following conclusion is drawn: The perfection which the apparatus has attained, the diminution in the size of the fish taken, the exhaustion of numerous localities, and the fact that fishing is pressed under these circumstances enough to keep up the maximum supply indicates that in the natural order of events, remarkable diminution, if not complete collapse, is to be anticipated in the coming decade.

not complete collapse, is to be seen the decade.

VI. The natural order of events may be averted by regulation of the size of meshes, preventing the pollution of the waters, and by artificial propagation.

In support of the foregoing statements the following details

In support of the foregoing statements the following details are submitted:

I. The Supply Maintained.—In his report for 1872 Mr. Milner gave a table of "the number of pounds of lake fish milner gave at table of "the number of pounds of lake fish received by first handlers," but he stated that his figures for Sandusky, Milwaukee, Green Bay, and Mackinaw were incomplete. He then adds "the sum total of this incomplete record is 32,250,000 pounds of fish." Mr. Kumlein's figures for 1873 foot up 168,742,000 pounds. That the total supply was not very much larger in 1879 than in 1872 is the universal opinion. It is also likely that the completion of the figures for 1872 would make a total of at least 50,000,000 pounds. In this period, the trade of Buffalo, Milwaukee, and some other places ell off, but was compensated by the increase of trade in Chicago. This decline at Buffalo from 1872 to 1879 Mr. Kumlein places at from 6,374,100 pounds to 4,001,000 pounds. It is impossible to state the exact decline at Milwaukee, but on buse reports a decrease from 14,000 half barrels in 1871, 7,000 in 1872, and 10,397 in 1873, but only 2,003 half barrels in 1872, and 10,397 in 1873, but only 2,003 half barrels in 1879. The only other wholesale dealer gave no comparative figures.

In 1872 Mr. Milner put, the transactions in Chicago at 7,461.—

barrels in 1872, and 10,337 in 1873, but only 2,005 half barrels in 1879. The only other wholesale dealer gave no comparative figures.

In 1872 Mr. Milner put the transactions in Chicago at 7,461,-162 pounds; in 1875 the total is given by a Chicago firm at 11,500,000 pounds; in 1876 the total is given by this same firm at 14,240,000 pounds; in 1877 the total is given by this same firm at 14,000,000 pounds; in 1879 Mr. Kunlein puts the Chicago trade at 17,247,570 pounds.

II. Maximum Effectiveness of Fishing.—The summaries of apparatus used in Lake Michigan, as given by Mr. Milner in 1872 and by Mr. Kunlein in 1879, compare as follows:

Pound nets. 281 476
Gill 450 24,599
Sail vessels and boats 689 612
Steam tugs 450
In their report the Wisconsin Commissioners say, "The number and variety of nots used for tishing are appalling, and their destructive character, supplemented by the spear, are rapidly exterminating the whitelish and salmon-trout in Lake Michigan, Green Bay, and in many of the larger inland lakes,"

raphuly externmenting the whiteish and sammer-rout in Lake, Michigan, Green Bay, and in many of the larger inland lakes."

In 1809 Mr. Kalmbach, who is at present a dealer in Green Bay, began fishing with the pound net in Bay De Noquet; pound nets were at that time a new institution in these waters, and in fact his was one of the first trials. He employed two pound nets, one eighteen the other twenty feet deep and twenty-eight by thirty feet square. From the 10th of October to the 25th of November, he took from these nets and salted 1,750 half-barrels or 175,000 pounds of No. 1 whitefish, and could he have secured assistance, salt, packages, etc., he could more than double this amount. Very few fish were smaller than No. 1. Of late years the pound nets have contained smaller and smaller meshes. The Wisconsin Commissioners in their report for 1874 state, "Ab Racine there are four boats in constant use putting out and taking up not less than twenty-five miles of gill nets. We are told by Mr. Jacob Schenkenbarger, one of our oldest and most intelligent fishermen, that with an equal number of nets only one-fourth as many fish are caught as were taken four years ago." He further says, "Late in October in 1870 I took with a set of thirty nets, at one time, 1,950 pounds of dressed trout. Four years ago, it was common to take from 1,000 to 1,500 pounds of fish at each trip. Now we never go over 500, and not unfrequently go less than 200 pounds. The lake is filled with nets, and the fish can hiardly escape."

In the report of 1875, the Wisconsin Commissioners say, "At Milwaukes there are four steam smayes, and two sailing Milwaukes there are four steam smayes, and two sailing

200 pounds. The take is filled with nets, and the fish can hardly escape."

In the report of 1875, the Wisconsin Commissioners say, "At Milwaukee there are four steam smacks, and two sailing smacks engaged in fishing. These six smacks have a total of sixty-five miles of nets. Each steam smack costs about \$7,000. The capital invested at that place is not far from \$75,000. Kenosha employs four smacks, with about thirty miles of nets, and the eatch is about equal to Racine. In these places, Kenosha, Racine and Milwaukee, there is a total of one hundred and twenty-tive miles of gill nets used. There is a total of nets used in the waters of Lake Michigan to extend from one end of the lake to the other. During the year 1875 there have been great complaints of scarcity of fish, and there has been a falling off of at least one-fourth; so that it is evident to all that the waters of Lake Michigan are being gradually depleted of fish."

III. Size of Fish Diminished.—In their report for 1875 the Wisconsin Commissioners say, "In former days the fishermon used nets of a larger mesh and took whitefish that weighed from eight to fourteen pounds each, the latter figures being the largest known to have been caught. Now they have to use smaller meshed nets and take smaller fish, the larger ones being almost unknown now.

From Green Bay, Mr. Kumlein reported: "Of late years

use smaller meshed nets and take smaller fish, the larger ones being almost unknown now.

From Green Bay, Mr. Kumlein reported; "Of late years pound nets with small meshes have been largely employed and thereby millions of young whitefish have been destroyed." Writing from Port Clinton, Mr. Kumlein says: "In Mr. Nickel's opinion, the mesh is now rarely one-half the size it was ten years ago. The fishermen and dealers generally pronounce the decrease—especially of whitefish—very great indeed. However, Mr. Mathews, of Port Clinton, thinks there are just as many whitefish as ever, and as many caught; but, being distributed among more fishermen, they individually take less than formerly. Collectively the catch is pretty much the same as it was ten years ago, or ever was, in his opinion."

being distributed among more inhermen, they individually take less than formerly. Collectively the catch is pretty much the same as it was ten years ago, or ever was, in his opinion."

From Menominee, Wisconsin, Mr. Kumlein writes: "The number of whitefish to a half-barrel is yearly growing greater. Sixty has been thought a good number; now, ninety is common. I am informed by Capt. Thos. Larsen, of Menominee, that he has seen a half-barrel filled with twelve no longer ago than 1874. It is the opinion of fishermen north of Menominee that the whitefish increased in number on their shore till 1876, when the yield rapidly fell off, till the present date it is estimated to have fallen off two-thirds since 1875."

At Washington Island in 1878, there were over five thousand barrels, equal to fully seven million, five hundred thousand young whitefish thrown away, being too small for market.

Writing from Green Bay, Wisconsin, Mr. Kumlein says: "During the autumn of 1873 and the spring of 1879, a proniment dealer at this point collected from fishermen along the shore of the bay, large quantities of whitefish, which he purchased already packed and salted in half-barrels. They were bought for No. 1 fish, but in re-packing be found some of the packages to contain as many as six hundred fish, and, of course, none were large enough for No. 1. There were a very few No. 2, and the lot was even barely salable as No. 5. Many were found that did not measure three inches dressed."

IV. Depletion and Search for New Fisheries.—Of the eastern shore of Green Bay Mr. Kumlein says: "The once famous fisheries of The Door" around Washington and S. Martin's Islands, Little Sturgeon Bay and Chamber's Island are no more. On the ground where once stood forty staunch Mackinaws and five steam tugs, with about four thousand gill nets, brought to their owners in the neighborhood of 8100,000 a year, the fishing is now carried on by a few superannuated findians and the guils. The same grounds that in 1873 yielded \$4,000 in four months from two poun

pound nets, set off Chamber's Island, \$4,175.91 worth. This year on these grounds, with nets double the size, and in twice the length of time, the product has been a trifle less than \$400. Ou the same grounds where one boat with two men sold from their gill nets \$9,000 worth of fish in one year, there is no fishing at all now.

the length of time, the product has been a trifie less than \$400. On the same grounds where one boat with two men sold from their gill nets \$9,000 worth of fish in one year, there is no fishing at all now.

Mr. Windross of Green Bay estimates that at Oak Orchard and Pensaukse the catch of whitefish has fallen off ninety per cent. since 1893. He lays the decrease in a great measure to the sawdust polluting the spawning beds, and in corroboration of his statements cites the following, which he himself has witnessed. In 1845, the whitefish came up the Oconto River as far as the falls, twenty miles, to spawn. With a small seine he took 1,200 half barrels and could have taken a great many more if he could have used them. This was only at one locality and they entered all the weirs in the same manner. Now, the river bottoms are one mass of saw-dust and it also extends far out into the Bay, so that the sheltered shoals are so covered that the fish desert them. Saw-dust and it also extends out two miles from shore about the mouth of the rivers. Mr. Windross thinks the whitefish spawn more around the island and on the east shore. Very few spawning on the shore from Suanico to Peshtigo Point.

Of the tributaries of Green Bay near Menominee, Mr. Kumelm writes: "From different to thirty years ago the most profitable fishing grounds were in the Menominee River near its mouth. Here racks were constructed which caught the fish as they came down from spawning. On such racks as high as six hundred barrels of whitefish have been taken in one autumn on a single rack.

Mr. Eveland says that not a whitefish has been caught in the river for the past twolve years. As soon as the sawdust began polluting the river the whitefish abandoned it. It was no unusual occurrence to take six hundred barrels of whitefish in a season, twenty years ago, on one of the Menominee River racks.

Duluth, Minn., does not seem to have been much of a fishing point until recently. Now the industry is assuming much greater proportions than in 1879. The town i

before. But it must be remembered that the facilities for capture are better, the men more experienced, and the grounds better known. There is also more twine in use than ever before."

August 30, 1880, Messrs, W. W. Paddock & Co., of Ashland, Wis., who own over 1,200 gill nets, twenty-three pound nets, and seven seines, wrote: "There seems to be only one-third of the whiteish caught near Ashland that there formerly was."

Of the fisherics of Lake Superior from Keewenaw Point to Huron Bay, where the catch in 1870 was 8,000 barrels, mostly whitefish and trout, Mr. Kumlein writes: "Whitefish are said to have decreased considerably in fifteen years, especially in Keewenaw Bay."

Mr. Kumlein, writing from Marquette of the fisheries extending thirty miles east and west of that place, says: "Fifteen to twenty years ago the fishing was done almost entirely with hooks for trout and only with gill nets for whitefish and trout. This is stoutly denied by some who say the fish have merely moved on to grounds inaccessible to the fishermen or not yet discovered by them."

Mr. Kumlein says of White Fish Point: "This fishery was purchased in 1870 by Jones & Trevulle of Buffalo, N. Y., who employ a steamtug, two Mackinaw boats, two pound nets, two seines, and thirty-wisk box gill nets, Of late the fishing has not been so profitable as it was five or six years ago. In 1873 there were but 1550 half-barrels sakled, while in 1874 there were 2,800. They take only whitefish and trout. In the last three years the catch has been too poor to pay expenses."

West Coast of Lake Michigan.—Mr. Kirtland of Jackson-port, Door county, says that in his neighborhood the amount of whitefish has fallen off fully one-third in seven years. No fresh fish at all is sold here now, as it was three years ago, but it is all salted and disposed of to coasters.

Aft. Marion of Oostburgh says that as many fish were caught the last three years as usual, but the number of nets has greatly increased, so that the decrease of each man's catch is thought by some t

seven and good asimis, and the figures are quite reciality.

Concerning the Mackinaw fisheries the figures are quite reliable. In 1874 Judge G. C. Ketchum ascertained the product of that year to be equal to 3,259,890 pounds fresh, and in 1879 Mr. Kumlein shows the product to be equal to 3,259,896 pounds fresh, or a decrease of 282,944 pounds, or eight per cent., in

ears.
iile visiting the Lake Huron fisheries, Mr. Kumlein wrote:

while visiting the Lake Huron fisheries, Mr. Kumlein wrote: "We is estimated by Mr. Case that ten years ago, with the same number of nets now used, three times the amount of fish would have been caught. He used to put up 1,200 barrels in a year; now he seldom gets over thirty tons."

Writing from Erie, Pa., Mr. Kumlein says: "Many years ago Barcelona was the most important fishing point on Lake Erie, but at the present time it amounts to but little. Dunkirk was also for a long time famous, but very little is done there now. Erie. on the other hand, is improving."

In 1872 Mr. Milner wrote of Sodus Point: "There are three boats here fishing pound nets." In 1879 Mr. Kumlein says: "Now there is none."

In 1872 Mr. Milner said: "Poultneyville, N. Y., has been a resort for Canadian fishermen for years. Fourteen or fifteen years ago they came over in numbers, and they came almost every year." In 1879 Mr. Kumlein said: "Now there are none at all."

years ago they came over in numbers, and they came almost overy year." In 1879 Mr. Kumlein saud: "Now there are none at all."
From Sackett's Harbor, Mr. Kumlein writes: "Clark and Robbins, of Sackett's Harbor, say that in 1879 they salted 2,447 half-barrels ciscoes, while in 1879 they got but 100. They think such fish as pike, black bass, trout, etc., have increased since the aleowiese came, and that the whitefish and ciscoes have greatly decreased."
From Lorain county, Ohio, Mr. Kumlein writes: "The general impression seems to be that the decrease among the whitefish for ten years has been very great. The years ago there were not more than half as many nets as now, yet a much greater quantity of fish were taken."
Speaking of the vicinity of Green Bay, Mr. Kumlein says: "Tive years ago Chamber's Island supported nine pound nets, doing a good business. Now there are but two, and these did not pay expenses the last year. In 1878 Mr. Minor alone sold to two furns, one in Chicago and one in Buffalo, \$19,571.95 worth of salt fish, and \$700 worth of fresh fish. At the same time a Cleveland firm on Washington Island did more than double this business. At the present time none at all are shipped from these same grounds which once yielded such a revenue. Prior to 1873 the average shipments per week from May to July was seven hundred half-harrels, worth on an average \$4. About 1874 the greatest decline was appreciable, and then the fishing suddenly dropped off entirely."
From 1870-1873 from sixty to one hundred tons were shipped from Fish Creek, and all taken within a radius of ten miles.

V. The Crisis.—If the facts heretofore presented establish the allegation that (1) the number of pounds of fish caught has been maintained, but (2) by enormously increased and effective facilities, (6) that large fish are seldom caught and that the small one have not been allowed to survive, so that (4) already many fishing places have entirely failed us, it cannot be denied that a crisis has been reached such as seriously to alarm all who are interested in the lake fisheries.

VI. The Remedy.—The great efficiency of apparatus which has been reached will remain. We do not retrograde. Men will still use the powerful appliances which they have discovered; but it is possible for the neighboring States to regulate by law the size of the mesh and some other minor details. This some of the States have attempted, and no doubt others will imitate them. It is also greatly in the interest of certain localities to prevent the pollution of their waters with sawdust, decayed lumber, offal, etc.

Artificial propagation has already been attempted on a limited scale and the methods pretty well worked out. It is believed that if carried on extensively it may become a very powerful factor in the remedy desired.

THE EDINBURGH FISHERIES EXHIBITION.

THE EDINBURGH FISHERIES EXHIBITION.

THIS exhibition was opened on Wednesday, the 12th ult., and promises to be a success. Lord Rosebery formally opened the exhibition at 1P. M. with an appropriate speech, which elicited frequent applause. The London Field says:

One of the most striking and apparently popular exhibits was that of the "bony fishwires," a number of whom were present in a great variety of very picturesque costimes. The London Field says:

One of the most striking and apparently popular exhibits was that of the exhibition rendered useless any attempt at dealing with it systematically as yet; we could, therefore, only wander through the building and take note of such things as struck the eye. One thing we could not fail to notice, and that was the splendid collection of specimens of fish preserved in cases which had been sent up by the London anglers for exhibition; we question if there has ever been so fine a collection get together. No doubt the Londoners were grateful to their Scotch friends for affording them such unlimited opportunities of practicing their art, and so took an honest hand-grip across the border. ** * * There is a capital collection also of stuffed British aquatic brits and their eggs, by A. Hogg, of Edinburgh. A collection of poor Frank Buckland's casts, from Kensington, including the large salmon so deffly painted by our lamented friend Rolfe, were also there under the charge of Eden.

Fine drawings of fossil fish were exhibited by Dr. and Mrs. Traquair, and a horrible example of a deboshed old salmon perishing from Saprolegnia ferax was skillfully drawm and colored, with illustrations of the disease, on a large scale.

Mr. A. Brown, of Glasgow, showed a lovely collection of shells, covalines, annellas, crustaceans and tishes made in the Vega expedition were a credit to Sweden.

Dr. Prancis Bay had a nice collection of British fishes, and C. W. McIntosh a fine case of fish from the Channel Islands.

Mr. Percy Russ exhibited a capital show of beautiful rative oysters from Cullm

cases are not yet on view.

India rubber and oiled waterproof goods appear to be well represented, among which is a most amazing arrangement called the patent pedomotive duck shooting apparatus, in which a man cases his legs in boots which terminate in feet very badly afflicted with elephantiasis, to all appearance, with a large float round his waist, so that he can apparently "walk the waters like a thing of life."

There is also a collection of life-saving apparatus, showing how the cork is prepared and fixed; and prepared corks for fishing are given in varieties.

Herring casks, measures, and brands are displayed by the Fishery Board; and coral, both raw and fabricated into ornaments of socialities, and paparatus, models of weirs and fish passes, and many other departments of interest, will be better taken next week, when they are more complete.

The only notice of any American exhibit we find in Land and Water, which mentions a display of fishing tackle by Conroy and Bissett, as "apparantly very light and nicely finished fishing-rods."

CALIFORNIA SALMON TAKEN IN OHIO.

CALIFORNIA SALMON TAKEN IN OHIO.

I HAVE just learned with gratification of the capture of three California salmon, from Newbury Pond, located ten miles from this place. The young fish were planted by the Fish Commissioners four years ago, and as we had heard nothing from them up to the date of the capture named, we feared that they had all perished. Those taken weighed respectively about three, two and a half, and two pounds, and were taken on minnows by some countrymen, who did not know what they were, and who placed them with their catch of bass, instead of returning them to the water alive, as they should have done. From a description given me by a man who saw two of the fish. I have not the slightest doubt but that they were California salmon, and in time we anticipate some fine sport with them.

We have a pond in this place for propagating black bass, and last season we placed several hundred young bass, taken with a net in Chagrin River, in waters not before stocked with this desirable fish.

and last season we provide a with a net in Chagrin River, in waters now with the with this desirable fish.

There are also at least twenty carp ponds within ten mile of this place, stocked through the kindness of Prof. Baird an his assistants last year and the year before.

J. J. S. Chagrin Falls, C. April 21.

LATE SPAWNING BROOK TROUT .- The trout in the LATE SPAWNING BROOK TROUT.—The trout in blue upper waters of Caledonia Creek spawn very late. Mr. James Annin, Jr., of Caledonia, N. Y., has the latest eggs of any breeder we know of. This year he took 800 eggs on the 12th of April, and has taken 5,000 in the two weeks previous. In some waters the trout spawn in November and in others not until the following months. Trout confined in cold spring water where they do not feel the change of seasons take on a very irregular habit of spawning, and sometimes those in one pond will be all winter at it; a few of them early and others three months belind them.

THE ADVERTISEMENT of the Grand Rapids and Indiana R. R. in this issue presents a very attractive and alluring prospect to the sports-man or tourist. The fishing in Northern Michigan promises to be unman or tourist. The issuing it would be a stringed possess or but usually good, and the season for trout is now open. Black bass, pike and pickerel abound in these, and the beautiful scenery and clear, bracing air must add greatly to the enjoyment of a fishing trip. The road thoroughly appreciates the wants and necessities of sportsmen, aims to make them comfortable, every convenience for them, their traps or dogs being provided.

WATERPROOF FISHING-LINES.-We have inspected a box of the "Standard" water-proof fishing-lines of William Mills & Son. They claim for this line that it is the smoothest and best water-proofed; that it is the strongest and the most durable because it is made of the best quality of silk. The lines certainly are smooth and very

GORDON SETTERS.

Editor Forest and Stream:

I noticed in your paper of April 20, an article by one who has written under the non de planne of "Vitus." He, in speaking of the Gordon setter, claims that Stonehenge says this breed of setter has been unjuestionably crossed with the bloodhound. Will "Vitus" piese Inform me in what edition he finds such a statement? Othe contrary. I find in the third edition of Stonehenge, where he, in speaking of the Gordon, says that "this dog after taking prize after prize, his extraordinary career naturally caused a great amount of jealousy and he was called by the coposition party a cur, a mongrel, a half bloodhound." Now this puts it in a different light; the above slurring by the opposition is about on a par with the opposition party of the present day, when they say he has a collic cross, all of which I look upon as far-fetched, and to not a word of which all attach one particle of truth.

I have brid do I attach one particle of truth.

I have brid well attach one particle of truth.

I have brid seen the slightest trace of any such cross. The opposition yearly seem still to have rankling in their hearts the defeats the Gordone gave their favorites at the early field trials and bench shows in Burope, and if our bench show committees will see that the judging system is better understood, or anew standard formed for the judges and exclude these heavy stay for the present day, then the grand dog will come to the front as a prize winner again. Some quote Stonehenge as saying there are many black and tans, let it be so, but do not mix them up. I notice that "Vitus" speaks of gun-shy mongrels. Does he mean Gordons or black and tans, let it one, but we want for done in the strain than you will in either English, Irish or pointers.

My experience has taught me that pups are never born gunsty, at least 1 have never seem it so. Gun-shyness or noise-shyness, caused

Now, I would like to have "Vitus" describe the English and Irish setters, so that I may be able to distinguish between them. Are there any pure English or Irish setters in America?—for, on reading the article, I am almost enticed to believe that we have no dogs in this country but mongrels. Can "Vitus" tell me of any published work that describes the English and Irish setters accurately?

Subscriber. Middlerown, Conn.

WE ADVISE HIM NOT TO SHOOT.

WE ADVISE HIM NOT TO SHOOT.

A MAN residing in a small village not far from New York city, who has a great antipathy for all dogs, whether of high or low degree, having procured a permit (from some of the village authorities I suppose) to shoot all dogs at sight found wandering alone on the highways, proposes to wage an exterminating war upon them. Now, I live in that village and own dogs there; and my dogs being of considerable value I would like to know if, in case of his destroying any of them, I would have grounds for action against him, or if I am to remain passive while this high-handed business is going on. Perhaps you will say to keep the dogs chained. That would not do, as they are large (setters) and require a great deal of exercise, which they can only get by being allowed their freedom. My chief object in residing in the country is to benefit them.

om. ary enter objects. UNYX, hem. [The courts in this State have decided that a dog is person

them.

ONYX.

(The courts in this State have decided that a dog is personal property. In our issue of November 24, 1881, we cited a judgment to the effect, rendered by the Court of Appeals, and we repeat it here for the benefit of the individual whose strange resolution you mention:

The case was that of Mullahy, plaintiff in error, vs. The People, defendants in error; decided October 11, 1881. The plaintiff in error was indicted for grand larceny for stealing a dog of the value of 890, and was convicted of petitlarceny, the value of the dog being admitted to be only \$35. His counsel claimed that stealing a dog is not larceny. Wm. F. Kintzing for plaintiff in error. Baniel G. Rollins, District Attorney, for detendants in error. "Held, That while at common law the crime of larceny could not be committed by feloniously taking and carrying away a dog, this rule has been changed by the Rovised Statutes. 2 R. S., 690, § 1; id., 703, \$35; 1 Park. C. R., 593; 4 id., 386; 10 Jabb. N. S., 132. The definition of 'personal property' in section 33 of 2 Revised Statutes 763, as used in that chapter, as 'goods, chattels, effects, evidences of rights of action,' and certain written instruments, is comprehensive enough to include dogs. It is to be taken literally, and the law makers inheaded to make it the crime of larceny to steal any chattel which had value and was recognized by the law as property. A system for the taxation of dogs having been at the same time enacted, 1 R. S., 704, it can scarcely be supposed the Legislature meant to regard dogs as property

for the purposes of taxation and yet leave them without protection from thieves. The definition of personal property found in the statute is not to be referred to the common law, but to the common understanding at the time when the statute was enacted. Judgment of General Term, affirming judgment of conviction, affirmed. Opinion by Earl. J. All concur, except Folger, Ch. J., dissenting."

Another case in point is that of one Henry Schmidt, who was recoully sentenced by Judge Cowing to four years' imprisonment for stealing from Augustus Van Courtlandt, of Kingsbridge, a setter dog valued at \$50.

The Revised Statutes of this State provide, Ch. XX, Tit. 17, (Sec. 6) that any person may kill a dog, on which the tax has not been paid, live days after demand; (Sec. 15) that any person may kill a dog which he sees chasing, worrying or wounding any sheep; (Sec. 16) that owner must kill his dog, if he has committed any of the above acts, on notice thereof; (Sec. 17) that the justice of the peace may order owner to kill dog if he has attacked peaceable travelers. It has been held that any person may kill a fercicious or dangerous dog running at large—(Putnam vs. Payne, 13 Johnson, 312; see also Maxwell vs. Palmerton, 21 Wendell, 707; Dunliep vs. Snyder, 17 Barber, 561). Or if a dog is a general nutsance, 2. 9, if he is in the habit of flying at persons on the street—(People vs. Board of Police, 15 Abb., Pr. 167). Or if he hows hy day and night on the premises of one who is not his owner, and the missance cannot be absted in any other way—(Brill vs. Flagler, 23 Wendell, 354). But the mere fact that the dog killed had been accustomed to worry logs, etc. on defendant's premises, within plaintiff's knowledge, is not a bar to an notion for damages for the killing—(Hinckley vs. Emerson, 4 Cowen, 551). We understand that a case will be tried at Niagara Falls, this State, nox summer, in which the principle under consideration will be involved. If our recollection of the cocurrence is correct, an official of that village killed

THE STORY OF A LOST DOG.

CLEVELAND, April 14, 1882.

Editor Forest and Stream:

My setter dog, Sancho. disappeared Friday afternoon, 7th inst. Monday following I received the inclosed (copy) letter, written on the letter-head of the signer, "Attorney at Law:"

My setter dog, Sancho. disappeared Friday afternoon, 7th inst. Monday following I received the inclosed (copy) letter, written on the letter-head of the signer, "Attorney at Law."

MR. F. L. CHAMBERLIN:

Dear Str.—A setter dog of a bright yellow color, luaving a collar on marked as per above, followed a gentleman down from your city last might. If the dog is a valuable dog and one worthy of a renumerative reward, I feel assured I could get him for you. If not, then the subject does not merit our attention further. I shall expect a reply by return mail if you wish to regain the said dog. I am very truly yours, (Signed)

Wishing to see how far this man's variee would tempt him, I wrote as follows:

JAMES T. ROBESON, Esq., Attorney at Law, Willoughby, O. Dear Sir.—To yours of 8th—the dog Sancho is a valuable dog. How much reward do you and your gentleman friend require? Please answer at once, as I wish to use him. Yours truly,

This seemed to change his tune. for he wrote as follows:

WILLOUGHRY, Lake County, Ohio, April 11, '82.

MR. F. L. CHAMBERLIN:

Dear Sir.—To begin with, you have entirely misjudged me. My gentleman friend, as you see fit to denominate the purloiner of your dog, I never saw before nor since. It was by the merest accident that I happened in a meat market on Friday evening to get my usual family supplies, and he came in with the dog. The dog attracted my attention, and I tried to buy him. I chanced to see the plate on his collar, and told the man that the dog belonged to F. L. C., of Cleveland. He was taken back, and admitted he was not his owner. I used to live in your beautiful city, and the thought occurred to me, this dog is thought a good deal of by its owner, and if I get him away from this man and get him back to Mr. C., I will be doing unto Mr. C. as I would be done by. I simply wanted to have you pay necessary expenses—no reward. Your letter is more or less Insulting. I have formed an attachment for the dog—he for me. I was in hopes you would not answer. Now, I have the right to ask y

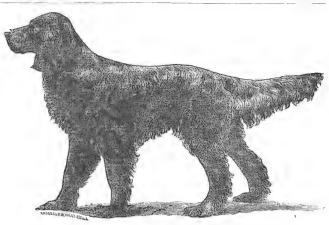

EASTERN FIELD TRIALS CLUB.

EASTERN FIELD TRIALS CLUB.

THERE was a very important meeting of the Eastern Field Trials Club at Delmonico's last Thursday evening. Action was taken upon matters that are intimately connected with the future welfare of the Association and it gives us great pleasure to announce that the result is all that its most sanguine friends could wish. Among the more important changes was the limitation of the number of members to one hundred. The original motion placed the limit at seventy-dive, but as there are already seventy-two and several gentlemen were anxious to join, the limit was extended. The initiation fee and the annual dues were unanimously increased to \$25 entel. This is decidedly a step in the right direction, and places the club upon a sound financial basis. Although there is nearly \$300 in the treasury and no debts outstanding, the proposed leasing and stocking of grounds for holding the annual trials will require quite an outlay, and with clubs, as with individuals, a handsome balance in bank is of the greatest importance. The by-laws were further amended by reducing the number of governors from twenty-five to fourteen, including the officers, and making seven a quorum and also making eleven a quorum at the general meeting of the club. It was will require quite an outlay, and with clubs, as with univaduals, a handsome balance in bank is of the greatest importance. The by-laws were further amended by reducing the number of governors from twenty-live to fourteen, including the officers, and making seven a quorum, and also making eleven a quorum at the general meeting of the club. It was voted that the fiscal year shall commence the second Thursday of January. The committee on grounds for holding the trials reported progress, and were given further time with power to select and announce the same with the time of the receting. The appointing of the judges and the arrangement of all necessary details in connection with the trials was also placed in their hands. Mr. James H. Goodeell and J. E. I. Grainger were added to this committee. The meeting then adjourned, and a meeting of the Board of Governors was held and Mr. Edward L. Ludlow of New York was elected a member of the club. The meeting was characterized by the utmost good feeling, and much enthusiasm was manifested by the members present. Mr. Donner briefly outlined the history of the club up to the present time and elequently alluded to the possibilities of its future, and congratulated the members upon the brilliant prospect of a long career of usefulness. If is the intention of the club to lease or purchase suitable grounds for the holding of the trials in order that they may not be obliged to go so far as seems inevitable this year owing to the scarcity of birds in this vicinity.

SAMUEL G. DIXON'S "LADY PILOT."

SAMUEL G. DIXON'S "PILOT."

PILOT AND LADY PILOT.

PILOT AND LADY PILOT.

WE give this week cuts of the Gordon setters, Pilot and Lady Pilot, the property of Mr. Samuel G. Dixon, of Philadelphia. They are undoubtedly as good specimens of the Gordon setters as can be found. Pilot we think exceptionally good, and doubt if there is a better one in the country. He is of capital form, with plenty of bone and musele without lumber. Both were exhibited at the late New York Show, and were awarded a vhc. in the class for black and tans. In the special class for Gordons, Pilot was thrown out as having been beaten in the recular class, but as this was manifestly an unjust decision, his owner protested, and the class was rejudged and Pilot was awarded the prize. We are informed by a gentleman who has seen them in the field, that both of them are very speedy and strlish, and are possessed of excelent noses, and that their dispositions are of the best. Their breeding is first-class. Their sire is the well-known champion Grouse, who was imported by Mr. Jas. Moore, of Toledo, O., out of Maud, who has a pedigree extending back over forty years. The cuts were made from photographs by Schriber Bros, of Philadelphia, and are excellent likenesses. In writing to us of the does Mr. Dixon says:

"It consider the standard of points as now given at bench shows for the black and tans, or Gordons, as they are still called by some, at variance in many respects with the necessary requirements for field purposes, and until this is recognized by those who are breeding this strain of dogs, the black and tans will never be able to compete with other strains, especially in field trials.

"When bench shows were first inaquarated, the 'English'. Thish' and 'black and tans' all competed together. In the course of time they were all classified, and now, at bench shows, compete separately. This was owing, in the main, to difference of opinion as to color, form and shape, which, in the opinion of leading sportsmen and breeders, gave certain strains an advantage over others.

"When bench shows and espe

more serviceable for our present shooting than the dog of the past."
"How has it been with the black and tans?
"Until within the last two years just the reverse. Twenty years aco, when the black and tans were so popular and were then called Gordons, their form and shape was to a great extent like that of the English and Irish setter, and their disposition like that of the English, except, perhaps, a little more docile; they also took part in field trials. From that time out, with few exceptions, they have for the sake of color mainly, been classified and bred according to a standard of points which has produced the heavy, cumbersome, useless dog of to-day. The one thing they have retained has been the nose.
"Stonehence, Idstone, Vero, Shaw, and all the leading authorities of to-day, have admitted that the objections to the black and tans is on account of their heavy form, want of speed and endurance, and their disposition, which, being high strung, is at one time timid and another headstrong, which makes them very difficult to break.
"It is therefore with the view of correcting these objectionable features that I have been breeding my dogs, and I think I have succeeded.
"In crossing Mand to Grouse I was desirous of getting a little more body and bone, as my strain was beginning to get too light, and by crossing with Grouse, who is a heavy dog, I obtained what I wanted."

PUGS.

PUCS.

WE publish the following criticism upon the pugs at the New York Show from the pen of a well-known lover of the breed. We wish it distinctly understood that we think too much of our own hair to indorse a single one of his adverse criticisms, and have only words of praise for the ugliest pug of them all. Our correspondent says:

The champion class finds George at the front. We agree with Mr. Watson in making this award, as George is the most showy pug in the class. He is faulty in being badly undershot and "up-faced," also protrudes his tongue, and is wanting the black trace. George stands a trifle high, and has more dew lap than the regulation calls for. His cars might be smaller and carried a trifle better. Roderick, in the same class, is of a more popular size, and may be called the ladies plet size. This clinking little dog is probably the best specimen ever exhibited in America, and it is very hard to find a more perfect one, taking Stonehenee's scale of points for a standard, but Roderick is sadly out of condition, and his owner should retire him from the show ring till in better form.

The open class were a very nice lot, much superior to last

standard, but nountees is covered by the show ring till in better form.

The open class were a very nice lot, much superior to last year's class. Mr. Watson, liking a short-bodied pug, selected snap for first place. Supp's skull is very flat, and smutty in color; he has a fairly small ear, but his mask is not defined enough, and his pluched face is not improved by the flesh-colored nose. Perhaps Mr. Watson did not notice the white on this dog's breast; and his ceneral show action, with a proper curled tail, although curved on the wrong side, gave Snap the blue ribbon.

The second prize dog Punch was fortunate in having a very short body and capital wrinkles, there his good qualities ended. Punch has a poor tail, very long muzzle, undershot; and small eyes, with white on his breast. Punch on his merits did not deserve to be placed over Napoleon, the third prize dog, for Napoleon has a splendid ear, small, rose-shaped and neatly carried; also has a beautiful trace down the back. His skull will girth more than either the first or second prize

dog, and his head is free of smut, showing the thumb mark very distinctly. Napoleon's body color is clear and light, and is free of smut, or white. His mask is very well defined, and he has a short muzzle, being unlike Snap or Punch. His teeth are level, as a pug's should not be over or undershot. We fancied Napoleon would have done better, and consider Napoleon on his merits a better specimen than the first prize dog Snap, but admitting that Snap is a dog that shows up better, and that is probably why Mr. Watson put Napoleon back. In the bitch class we find Effle II. at the front. We consider Effle the proper size, and hope breeders will try to take Effle's body build as a model. We consider her not good enough in tail, and a trifle pinched in a very short face. She has good natural wrinkle, and carries a nice, small, black rose-shaped ear. Dot, the second prize, has a nice head free of smut, and a well defined thumb mark. Dot has a nice muzzle, it is more snubby than Effle's, and her mask is well defined. Dot lacks trace and a tight tail. Vhe Puggie is rather long in body and a trifle too smutty in color. In puppies we find Don Juan first. He is a fair specimen, but rather long in muzzle.

The special award of 825 for best pug in the show was awarded to George, and all things considered it was very proper George should have this extra honor.

THE BIZMARK SETTERS.

THE BIZMARK SETTERS.

O'NE of your correspondents, "Reader," of Westchester, Pa., asks: "Why is it that, while we hear the virtues of the Gordon, Lavarack and Irish setters lauded so highly, no one has stepped forward in defense of the Bizmark?" Without wishing for one moment to underrate the wonderful field-qualities of the setter once owned by Mr. David Brooks, of Philadelphia, which he called Bizmark or Biz, we would simply state that there is no such distinct family of setters, nor can there be, even if the dogs do carry more or less of the blood of the one "Biz" in their veins, that are entitled to the name of "Bizmark setters." Biz was an extraordinary animal, a truly wonderful field dog, but his pedigree was uncertain, or I should say, was a broken one. He was before his unfortunate death bred to bitches, as different in type as they were nultitudinous in number; and their progeny again to other bitches. But few that I ever saw equaled the sire in field qualities. Many were good. None at all resembled old Biz in appearance except that lever saw equaled the sire in field you doe a great error to call the setters now in existence that have the blood of "Bizmark" in their veins, some to the extent of one-half, others of a quarter, and many more of an eighth, "Bizmark setters," A family of setters is not so readily created, and with fully as much fairness the numerous sons, grandsons and great grandsons of old Biz might be named after their individual dams.

Biz was a very powerful dog of great staying qualities. His coat was short for a setter, and his feather deficient. His head was squarely cut, and he did not possess the present show standard appearance. I doubt if there ever existed a more hilling all-round dog for every variety of game. All the record of "Bizmark's" pedigree that was ever procured I add, as obtained from one of his owners: "He was out of a white setter bitch, brought from England by a gentleman of Cedar Rapids, lowa, and she was bred to an Irish setter, also brought from England by a p

RED IRISH SETTER PUPPY AWARDS.

AST week we published the awards in the red Irish setter dog class as they were originally made instead of giving the result after the class was rejudged, owing to the discovery that the first prize had been awarded to a bitch. Of course this threw her out entirely and may seem a hardship, but we imagine that her owner is content with the honor achieved. When this class was rejudged Mr. W. H. Pierce's Snap was advanced from second to first, and Chief Jr. from vhc. to second.

advanced from second.

In writing of the Dandie Dinmonts we said that Badger II. Should have a vhc. Upon looking over our notes we find that we wrote No. 491, which number belonged to Kelpie instead of Badger II. By a palpable error Coastguard, a foxbound, was given the honor that belonged to the black cocker spaniel bitch Black Bess, owned by Dr. J. S. Niven of London, Ont.

AUCTION SALE OF DOGS.—The sale of dogs at the American Horse Exchange was not a decided success, although some of the animals brought fair prices. Mr. A. H. Moore disposed of some of his surplus stock at the following prices; imported champing fordon bitch Stella, seven years old, to Mr. L. M. Tough, Leavenworth, Kas., \$25, imported champing fordon bitch Mona, eight years old, Mr. P. H. Morris, New York, \$4; imported English setter bitch Dashing Model, four years old, to Mr. L. M. Tough, Leavenworth, Kas., \$77; Imported Llewellin setter dog Roderick, five years old, own brother to Count Wind'em, to Mr. A. Rogers, New York, \$122: imported English setter dog Count Dan, eight years old, to Mr. L. M. Tough, Leavenworth, Kas., \$111. Banjo-Rose and Ruby pointers and Lady Rapid, Gordon bitch, were not sold, Mr. Moore also sold three terriers, two Skyes, at \$33 and \$11 respectively, and a black and tan at \$21. Several other setters and pointers were sold at not very extravagant prices. There were a number of other animals of different breeds disposed of at low figures.

A FOX CHASES A DOG.—Trenton, Mo., April 27.—An old resident of Caledonia, Washington county, who was in our town on Circuit Court business yesterday, says that, while a farmer in his neighborhood was out in the field plowing one day last week, he heard his dog yelping loudly, and on looking around saw it making for the barn, closely followed by a large red fox, which kept up a continual barking as it ran after the dog. The latter is about one year old and of mixed

breeds. The farmer, when he saw the fox chasing the dog, fell down and rolled on the ground and nearly split his sides with laughter, for he had never before in his life seen such sight, he says. He had seen dogs chasing foxes, but a fox running a dog was "just too funny for anything." As soon as the dog reached the barn the man stopped his laughing and quickly got three or four of his neighbors together and they, with five hounds, immediately gave chase after the fox, which had turned tail after "treeing" the dog, and was trotting toward the woods. After chasing it for an hour and a half—keeping it in sight all the time, and following closely—the hounds succeeded in catching the fox. This is a true fox story.—C. W. T.

a time fox story.—C. W. T.

LAVERACK PEDIGREES.—In our issue of April 6, we published Mr. Herzberg's reply to the letter of Mr. Llewellin, who replies in the London Field of April 22. Mr. Llewellin says that since the facts in the case have been laid before the committee of the Kennel Club only, Mr. Herzberg cannot understand the merits of the controversy. He claims that for the pedigree of Countess, Mr. Laverack was responsible, not himself (Iclewellin). With respect to the charge that he had laid that fact before the Kennel Club, and had made it the basis of his attack on the purity of Pride of the Border. With respect to "culls," Mr. Llewellin says: Since my manner of dealing with Americans has been questioned, I wish fo observe that I have always stated plainly to intending purchasers that I kept my best dogs in my own kennels. Instead of having been black-balled by the Kennel Club, Mr. Llewellin says he has been repeatedly solicited to join, but has declined because of the presence in the club of certain of its members.

CLEVELAND BENCH SHOW.—Cleveland, O., April 36, 1882.—The outlook for our having a first-class show is A No. 1. Our people are taking a great interest in it. The specials are increasing every day, and will be worth competing for. Our prize list will be mailed this week. We hope the owners of good dogs will come forward and assist us in making the show a success, by favoring us with their entries. The Roller Rink is well suited for the show, and June is a lovely month here in Cleveland. We will try to make all sportsmen welcome.—C. M. MUNHALL, Secretary.

SETTER PUPPIES LOST.—Editors Forest and Stream: At the late bench show of Westminster Kennel Club some parties took, either by mistake or intentionally, two young setter bitches, one lemon and white, the other black, white and ticked. They were taken from the building between the ticked. AM, and 2 P. M. of Saturday. If the parties having them would drop a line to John Nickerson, Redding, Conn., he would esteem it a favor. They are about four months ald months old

THE BOSTON SHOW.—The number of entries for the Boston show is \$63, which is as many as can be conveniently shown in the hall.—Mr. Lincoln writes that most of the bestones in the country are entered, and that the show will be a good one. The setters come out strong with 150 entries, while the pointers muster but 40. The show will be held in Music Hall, commencing on Tuesday, May 9, and continue four days.

BREAKING KENNEL.—Mr. Jess. M. Whaite, whose advertisement will be found in another column, has removed to High Point, N. C., and will devote his time to the field education of his dogs. We have beard Mr. Whaite's abilities as a trainer very highly spoken of, and we have no doubt that the dogs entrusted to his care will prove satisfactory to their owners.

WILLARD BROS. of Jonesboro, Ill., have engaged the services of Mr. W. W. Titus to take charge of their kennel. He will prepare some of their dogs for the field trials next fall, and run them both at the chicken trials and at Grand Junction. Mr. Titus is a good handler, and we shall expect to see his dogs make a good showing.—KEN.

PEDIGREES WANTED.—Will some of our readers kindly give the pedigree of the imported liver and white pointer bitch Nellie, said to be of Duke Alexis stock; also that of the imported lemon and white pointer dog Down? We also would like the pedigree of Fisher & Beeckton's Border Lilly.

THE NEW YORK "WORLD" says of "Training vs. Breaking;" "Mr. Hammond explains from his experience, and he is an authority on the subject."

THE INTERNATIONAL MATCH.

THE INTERNATIONAL MATCH.

THE Adjutant Generals of the several States have been notified association, through the following one of Directors of the National Ridie Association, through the following one of the Comming international May Dean Size—We take pleasure in requesting a careful perusal of circulars herewith enclosed referring to the coming international military match between the National Guard (British volunteers) of Great Britain and the National Guard of the United States. Your attention is directed more especially to general order No. 11, issued by the Adjutant General and Commander-in-Chief of the State of New Juliant General and Commander-in-Chief of the State of New Juliant General and Commander-in-Chief of the State of New Juliant General and Commander-in-Chief of the State of New Juliant General and Commander-in-Chief of the State of New Juliant General and Commander-in-Chief of the State of New Juliant General and Commander-in-Chief of the State of New Juliant General and Commander-in-Chief of the State of New Juliant General and Competition of the team them to the service of his desideratum, we respectfully solicit your valued assistance. It is true that expert riffemen in all States are limited, yet a general order proming and develop latent material, but will enhance the interest competition among your national guardsmen or militia, will not only encourage and develop latent material, but will enhance the interest must also remember, in connection with the necessity of our town being represented by the most skillful marksmen obtainable in the United States, that the British volunteer team will be composed of exceptionally excellent shots, particularly at the longer ranges, and to increase the probability of success we must have a general competition and select the most available men strictly on recorded merit.

In the movement on the basis of upholding our national honor and reputation as marksmen, but she has guaranteed a trophy of money optional) to the value of \$50 for each member of her

BOSTON, April 29.—The geatlemen who participated in the regular weekly shoot at Walnut Hill to-day were rewarded by one of the most halmy of spring days. The sun shone brightly, warning the air most halmy of spring days. The sun shone brightly, warning the air or rather the air, came from the west during the morning, but about 2 o'clock it commenced to breeze up and blew quite freshly but not sunch so as to cause any trouble. There was a large number of gentlemen present, and, besides indulging in the regular sports, some practice at 500, 900 and 1,000 yds. avai indulged in. On Wednesday a team of the Massachusetts club will shoot against the Newport Club at Newport, and this fact led to the indulgence in a little team practice at Section 1, and this fact led to the indulgence in a little team practice at Newport, and this fact led to the indulgence in a little team practice at Newport, and this fact led to the indulgence in a little team practice at Newport, and this fact led to the indulgence in a little team practice at Newport, and this fact led to the indulgence in a little team practice at Newport. The subscription when the subscription was a new properties of the found below. The subscription match opened on Fast day had some entries for the first time yester day. The result of the day's shoot is given in detail, and is as follows:

After the chant the wicitors with	many of	the	Gardon	Club, ha	a for

After the shoot the visitors with many of the Garden Club, had a supper at the Central House. At the next meeting of the Garden Club, had a supper at the Central House. At the next meeting of the Garden Club it is proposed to make a day of it; put up a new target, fix up the building and improve the range in other ways.

ALBANY—The short range match at Renseslaerwyck was well attended. The air was raw and chilly, the sky was overcast, the light good and wind not troublesome. The men were in good condition, holding well and getting bullsoyes without much apparent difficulty. At the first distance all of the competitors had over an average of centers, and some were high up in the thirties, At the second distance the relative positions of the men were not materially changed, and nearly all succeeded in getting good totals. The scores were as follows:

4	4	5	5	5	4-32 62
4	4	5	4	D	4-30)
5	4	5	5	5	4-32 61

NEWARK, N. J., April 30.—The shooting of the associated clubs in this city in the last match of the season has been excellent, the high set score being made by the Essex, and the Frelinghuysen a good second. Mr. Lynn, of the latter club, made a 50 target, the first that has been made in a match or tournament since last December. The following are the total scores: Essex 499, Frelinghuysen 469, Celluloid 455, Warren 482, Plymouth 433. The Committee on Shooting Fastival, which will probably be held at the Newark Shooting Park, has not yet made arrangements in full. The date and conditions will be mentioned in next week's issue. It is hoped the neighboring clubs will enter.

WAKEFIELD, MASS., April 29.—The Wakefield Amateur Rifle Association held the closing shoot in the March series at its range to-day, when the following scores were made by the winners of the

grouped. I should like to hear some other person's views on pistol Shooting.—32-CALIBRE.

ILLINOIS.—Oregon, April 27, 1882.—Here's from the Sinnissippies again. Our regular shooting day was April 19, but owing to a base rain storm the match was postponed until April 28, and was shot at the Collection of the match was postponed until April 28, and was shot at the Collection of the Collec

THE CAPITAL CITY GUN CLUB made the following scores on their grounds, Saturiay, April 29, at twenty halls each, thrown from their grounds, Saturiay, April 29, at twenty halls each, thrown from McIrg Tounds, Saturiay, April 29, at twenty halls each, thrown from McIrg Tounds, Saturiay, April 29, at twenty halls each, thrown from McIrg Tounds, Satiola 18, Bagron 12, Morris 12, Van Arnim 11, Farnsworth 10, Hosford 10, -J. E. H.

LYNN, Mass, April 25, -The Lynn Central Shooting Club held their weekly shoot at their grounds, near the Putnam House, Revere beach, to-day. There was quite a large party attending, considering the day. A strong casterly wind blowing across the grounds made good scores the exception. Six sweeps at clay pigeons were shot, and there was practice at glass balls. Owing to the increasing popularity of the clay pigeon, an extra trap will be placed in position for use next week. The team match at clay pigeons will be shot Tuesday, also the medal score and sweeps at pigeons and balls. The following scores were the result of the first twenty shots, Frost winning the medal score:

18 Webster.

18

Frost	Webster19
Johnson	McFarland
Moore	Sauborn18
Hatch	Blake13
Barry	Sawver
Morrill	Arkinson
Randall	Macallister11

THE ROSLYN YAWL.

THE ROSLYN YAWL.

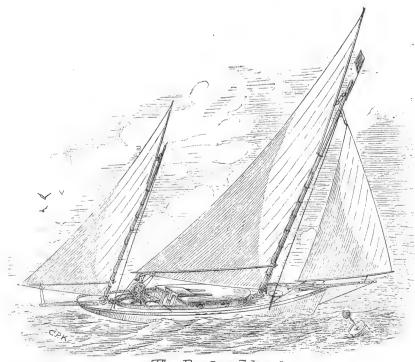

A SPECIAL adaptation of the principles of the yawl rig has been made by Mr. Ciapham, of Roslyn, L. I., and has been supplied to a number of the nonparells, as he terms the particular type of boat will be the points thought best in the sharple's usual rig have been combined with the disposition of the sail customary in the yawl. A very handy arrangement has thereby been secured, which serves its purpose admirably in small boats requiring only moderate area of canyas in proportion to length or size. The nonparell, being comparatively narrow and shoal at the same time, is an easy form to drive and does not necessitate the large spars of more powerful vessels. For this reason sprits and jib-headed sails which would not grard to simplicity, handiness and chaquess. For sporting purposes and operations in very shoal waters especially, the nonparells are perhaps without rival on the counts just named. Although a regular yacht is hardly to be deemed in normal condition unless able to beat

to windward, and therefore showing more or less board, the possibility of following game into the marshes and of entering creeks and bayous without any regard to sailing efficiency, is a consideration ever present with the hunting yachtsman, as well as with those rail or the possibility of following game into the marshes and of entering creeks and bayous with the hunting yachtsman, as well as with those rail channels into regions inaccessible to deep draft; boats. It is not intended here to open the question of seaworthiness of nonparells and boats of like order. Those who believe them equal to other yachts in this respect can find strong support in the assurances which Mr. Clapham has always given, and anything we might say would not be likely to influence seriously to the contrary those who have made up their minds beforehand. This matter may for the pways open to recording the observations of actual authenticated trials based on something more tanglible than hearsay evidence. For the latter we have very little respect, since of late so many theories about the superiority of single jibs and centerboards have been disputed by the lessons of competitive sailing.

If "the talk of the town" were really ought clee than the most superficial and unsubstantial myth, unworthy of a single carnest by several hours over a forty mile course, for it was a protound faith with many that a deep boat met with more resistance than a shoat bottom craft, that the keel was far less weatherly than the board, that "dragging" great weights could only hinder speed, and that splitting jibs lost much of the driving power of headsail. When it is borne in mind that with all these supposed drawbacks, the Madey of the old school lore will be measured in an instant. Yet, such idle theories were kept alive by being passed from mouth to mouth, till mere age gave to nonsense pure and simple, something like the weight of fact. Probably the reader will deem us justified in throwing to the winds all heresay talk as beneath the dignity of considera

sail, and her sailing qualities were improved every time. Her best point was always to windward and in rough water. Her draught was 36 inches.

The sonpared is a very fast boat, with probably no equal in this representation of the property of the canantras on a measurement of length, beam and period to the canantras on a measurement of length, beam and period to the canantras on a measurement of length, beam and period to the canantras of the state of the cutter. She ranks among the very finest of seagoing boats, notwithstanding the fact that her hull draws but a few inches of water. And she costs complete, when of equally good quality, one-third less than the sloop, and about one-half the price of an average cutter, size being equal.

"A nonpared sharple sixty feet in length by lifteen feet beam, can be built and rigged for \$2,000, and leave a fair margin of profit to her builder. Some of the specifications would be as follows: Planking or very flasts quality white pline, yellow pine, and convex Planking or very flast quality white pline, yellow pine, and convex planking the control of very flast quality white pline, yellow pine, and convex flast the property of the specifications would be as follower: Planking of very flast quality white pline, yellow pine, and convex flast the state of the specific planking of very flast quality white pline, yellow pine, and convert the property of the specific planking of cabin hardwood of various kinds varnished or oiled. Spars, sails and rigging, all of the very best. Galvanized iron windlass, two anchors, two cables, chocks, cleats, and lignum wits blocks complete, steering wheel, etc. A yacht of this size and kind will accommodate a party of ten or twelve Corinthians in comfort, and with two of them to handle her, will turn to windward, under dry decks, we appear that the planking of the property

The Roslyn Yawl.

peaked gaffs at the head do away with the long springing masts and give to the sail a flatter sit about the head, the peak purchase bringing a strain on the leach as desired. A yard is laced to the foot of the jib, the latter being set flying, and sprits take the place of booms on mainsail and mizzen. The latter can be readily furled by unshipping the sprit and smugging the canvas about the mast without lowering, a convenience when sail is to be taken off mizzen or under mainsail only, so that the same useful variety of sail plan is offered as in the regular yaw!

For larger boats, booms are substituted, the bowsprit increased in length and a permanent justay set up as well as a light shround added to the mizzen. In more powerful boats recourse could be had to gaffs in order to obtain a large spread, in which case, however, the distinctive features of the rigo of these boats would disappear. For a state of the mizzen in more powerful boats recourse could be had to gaffs in order to obtain a large spread, in which case, however, the both rig and boat appear to be exceedingly well adapted, and they are about one-third cheaper than round-biged boats into the bargain. How far they can fulfil the objects of regular yachting beyond this will probably be ascertaied this season with results no longer open to question. The Roslyn yawl rig has recently been supplied to a boat to be shipped to France for the artist Falcer. She is 367t, long, 9t. beam, the deck half in lin, square strips of different colored with altight compartments.

AND THE FISHING FLEET TOO.

with airlight compartments.

AND THE FISHING FLEET TOO.

THE Cape Ann Advertiser says that Nova Scotia builders of fishing smacks are showing a very decided leaning toward the English cutter in their latest models, which is very much to the credit of the Nova Scotians. It is our belief that Gloucester is on the point of following. The barrel bottoms have had their day. Now, let us have a little new blood to infres fresh ideas among the local talent along the Nova Scotians. It is our belief that Gloucester is on the point of following. The barrel bottoms have had their day. Now, let us have a little new blood to infres fresh ideas among the local talent along the Nova Scotians. It is our belief that Gloucester is on the point of following. The barrel was a little new blood to infreshing state the sarrely had been strained. The year of the present sishing fleet which the purely suppositious merits of the present sishing fleet which the purely suppositious merits of the present sishing fleet which the purely suppositious merits of the present sishing fleet which the purely suppositious merits of the present sishing fleet models have been straing. The yearching community has nearly been converted. What was the pride of the clubs but a few years ago has now lost caste. The beamy light draft is no more. What but a few years are was held up to ridicule is now received with high favor. Dept., low ballast, cuttor riges are driving out the ancient sloop. If mistermen may not soon take the cue.

The present agitation in favor of a modification of high bilegs and great beam is in accord with common sense and Foreser An Strakm. False pride, petty provincialism, spread-eaglisism and conservatism will be arrayed against the innovation. They always are in the struggle for any recomms. On the other hand the frightful annual life the sacrification of the provincialism, spread-eaglism and conservation and struggle for any recomms. On the other hand the frightful annual life the sacrification of the provincialism, spread-eaglism a

the brow languards and have been before out, and the foremast went over with the mainmast.

Our fishing vessels can be and should be so modeled, constructed, and fitted that they will not founder at sea except in case of collision, which accident is, of course, of rare occurrence, as the sea is a very wide field for vessels to sail and ride in. A vessel with her hatches, companionways, etc., well secured, will not sink by a sea breaking property of the sea o

LOADED CENTERBOARDS FOR CANOES.

LOADED CENTERBOARDS FOR CANOES.

Editor Forest and Stream:

The sailing canoes of the Royal Canoe Club, of England, frequently carried exterboards of their from plate, weighing. Iffly or sixty control of the control of their from plate, weighing. Iffly or sixty proceed to the control of the control of the first plate of the Atlantic. A heavy from centerboard forms most excellent ballast when lowered, but it has some disadvantages. It is unhandy to lift in and out of the canoe, especially if the latter is bobbing about on broken water by a wharf. When fully housed in the centerboard box, it makes a good deal of top-heavy weight, and helps the canoe to roll. Acting on a hint given to me by Mr. W. P. Stephens, at Lake George last Angust, I have designed, and have had constructed a centerboard loaded with lead, in which the greater part of the weight is concentrated in the lead, in which the greater part of the weight is concentrated and on each side of this is riveted a sheet of from one-sixteenth of an inch thick. This makes a hollow centerboard of a total thickness of two-eighths of an inch, and weighing twenty-three pounds. Two light from frames, 7-16 of an inch wide, with long handles, are made to fit into the lower part of the inside of the centerboard. These frames are loaded with lead, and each then weighs thirteen pounds, thus making the total weight of the centerboard by pounds when fully loaded. This new board will, I think, be found to possess the following advantages:

The weight heling nower with less actual weight. I hope that my denomination of the centerboard with the pound will over the medium of the centerboard with the pound will over the medium of the centerboard with the medium power with less actual weight. I hope that my denomination of the centerboard when any long with the second of the centerboard with the pound will over the medium of the centerboard when the pound will over the weight the pound will over the weight the pound will over the weight to the centerboard of the centerboard.

ling advantages:

The weight being concentrated in the bottom of the centerboard gives better ballasting power with less actual weight. I hope that my depond board will give as much sail-carrying power as a 65-pound iron plate would.

The lead-loaded board will act as ballast even when housed in the cance, and will not make the cance roll, as the greater part of the weight is then within five inches of the bottom line of the keep. For the same reason, most valuable help is drouted in lightle box or had not been lowered. A button across the slot on deck will prevent the board being unshipped in the event of the cance turning bottom up.

or and me used being unshipped in the event of the canoe turning between the board being unshipped in the event of the lead can be got helow the keel by lowering the centerboard eight inches only. It is much easier to handle in removing it from the canoe or putting it on board. Instead of one heavy lift of fifty pounds, you first remove thirteen pounds of lead, then lift another thirteen, and finish with a lift of twenty-three pounds.

When a light centerboard only is wanted, leave the lead at home. This will in some cases save the necessity of a man keeping two centerboards.

In the accompanying drawing, at figure 1, the board is shown with he the accompanying drawing, at figure 1, the board is shown with

This will in some cases save the necessity or a man keeping who centerboards. In the accompanying drawing, at figure 1, the board is shown with one side removed, so as to bring the internal economy to view. Starting at F, the frame is continued to E, thence to D and L. It is not continued up to the top corner at C, but is taken across to M, continuing to I, it doubles back in a sort of loop, and is welded at N. This gives doubled strongh at M and By, where the greatest strain is. The dotted line A B shows the line of the keel when the board is lowered. The portion of the frame from E to about M is made of bar bron % deep by % in, thick, From E to L tt is chamfered off to an edge,

0 /-/ BI SHEET IRON 1/16" Thick × LEAD R 0 1 1-117 15 775. 13 668 Ruinanii miranianai maine Kainanianii mainai Ruinai Ruinai Kainai Kainai Kainai Kainai Kainai Kainai Kainai Ka Fig. 1.-CENTERBOARD FOR CANOE. (Scale 1/2 inch.

as shown by the line R.R.R., so as to cut the water easily. A hook is welded on at P, which hooks on to the king bolt. Where the sheet iron is, the frame is half an inch thick, where not covered with sheet iron—G.I. A, and F to O-It is five-eighths thick, so as to give a uniform—G.H. A, and F to O-It is five-eighths thick, so as to give a uniform—G.H. I. and the state of the content of the state of the centerboard. It continues past M and C to L, where it is outer edge of the centerboard. It continues past M and C to L, where it takes a jog inward for balf an inch to the line R IR. It follows the chamfer along the bottom of the board to near E, and up to F again. The upper corner L C M is composed merely of the two thicknesses of sheet iron, and is only an eighth of an inch thick, except where it widens out as it approaches the bar L M. This, while glving pleuty of strength, gives room for the chain shackle at C without thinning down and weakening the frame, and it also reduces somewhat the top-heavy weight of frame at the corner. These two sheets of iron, 1-16 of an inch thick, are riveted to the frame by copper rivets as shown, and are chamfer d off from L to D and D to E, to correspond with the chamfer d the frame. From C to L the edges of the sheets are brought together so as to continue the sharp edge. Figure 2 gives a

Fig. 2, - Section Through River. Full Size.

full-sized section at one of the rivets. The two frames which contain the lead are made of one-half by three-sixteenths high iron, hammered on the rivets as oven at each of the rivets of the rivet which are riveted in the frames before the melted lead is poured into them. These wires are shown by dotted lines. The frames are fitted with long handles V I and O J, which terminate in eyes I and J. Above the eye J is a button K, working on a bolt F, secured by two jammed nuts below. This makes it impossible for the lead to fall out if the centerboard is upside down. The eyes I and J project above the deck.

To take out the lead when the board is housed in its box, turn the button K, put your finger in the eye J, and lift out the forward lead frame, then by means of the eye I, drag the aft frame forward, and lift it out.

To take out the read what the eye J, and lift out the forward and frame, then by means of the eye I, drag the aft frame forward, and lift it out.

[I found it necessary to have the sheet iron taken to the saw works and hammered that before putting on, so as to take the "buckle" out. There is a knack about this work which needs an expert. The inner received to the frame, and the outside of the board should be japanned when finished, which will prevent any galvanic action by the contact in water of the iron and copper. Copper rivets work better than iron. I was fortunate enough to secure the services of a blacksmith who was an excellent workman and a very intelligent man. I had praviously drawn a full-sized sketch of the thing on a wide pine board, and I remained with the blacksmith while he did the work. The result was a most satisfactory job. I mention this, because it is by no means easy to get a new thing of this sort put into good shape. He is the contact of the whole thing was about fifteen dollars. That was here in Canada; what it would cost in the United States I cannot say. You cannot take too much pairs in elaborating a ching of this kind before having it made. In the course of incubation I made from sixteen to twenty different drawings before I got the thing fairly hatched.] The next point is the practical test, which will be made this summer, on the waters of Lake Outarlo and Lake George. Of this I will let you hear further.

ROBERT TYSON, Toronto Canoe Club.

CHICAGO YACHT CLUB.—At last meeting new club colors were adopted—swallow-tail in shape, cardinal field, blue cross with C. Y. C. in white letters. Fourth class for small yachts was readopted, as the club proposes to encourage the "school for the salion." This is a wise measure. Annual matches probably July-4. Capt. Prindiville's new sloop, the largest yacht yet built in Chicago, has been lampined by sloop, the largest yacht yet built in Chicago, has been lampined by Sloop, the largest yacht yet built in Chicago, has been lampined by D. Length over all 77ft, on load line 64ft, beam 19.10ft, depth 7ft, and 6ft, draft aft, with 9ft. forpward: centerboard 18ft. long, draft, with board, 18ft., mast 8dft, topmant 40ft, bowspit 88ft, boom 66ft, gaff with board, 18ft., mast 8dft, topmant 40ft, bowspit 88ft, boom 66ft, gaff S. There are 1,500/46. In her working salis, all made by Channon Bros., of Chicago. Accommodations consist of saloon, four state-rooms, pantry, galley and forecastle for live hands. Schooner idlet, Mr. A. Fisher, is now being overhauled. Skipper Cooley will remain broom and bowsprit, receive brass rail around the quarter and new appointments below. The schooner Countess of Dufferin, Mr. William Borden, has been almost rebuilt. Has had a fantail added aff and new appointments throughout. Sloop Cora will split jib in accord with counsels of Forest AND STREAM. Chicago yachtsmuch back and eye on the Eastern market, and now that the club has been family established, "sold to Chicago" may become a common

been firmly established, "sold to Cineago" may become a common occurrence.

DEMAND FOR KEELS.—How the times and tastes have changed! A small cutter was recently sold and since then two applications have been made to obtain the same boat at an advance. Again, a gentleman intended to buy a centerboard sloop hauled out at Staten Island, and while looking her over espied an imported keel boat from Boston which was not for sale. He conceived such a liking for her, however, that an advanted of the conceived such a liking for her, however, that an advanted of the conceived such a liking for her, however, that an advanted of the conceived such a liking for her, however, that an advanted of the conceived such a liking for her, however, that an advanted of the conceived such a liking of the conceived such as a distribution of the conceived such as the conceived such as the conceived such as a such as the conceived such a

and that if the board may once in a great while "cut across lots," with a free wind, so too the keel can work up in much less water than the fin without loss of efficiency to windward. Occasionally the board is a very good thing, but much oftener experience will decide in favor of the keel, to say nothing about internal accommodations.

in favor of the keel, to say nothing about internal accommodations. ANOTHER CUTTER, —The lines of a new single-hand hoat of 3 tons are well under way. She will be a flushed-decked cutter or yawl, arranged to be used interchangeably, 24ft. over all, 24ft. on water-line, 7tl. beam, 4½ft. draft, and 5½ft. depth of hold. She will have 2,000th. lead on her keel and about 1,000th. inside, and will have a very commodious forceastle, 11ft. long, to stow a crow if desired. The ekylight will be framed in mahogany and arranged in such a way that the cabin and forceastle respectively cut be comfortably entered through it. There will be include that can be comfortably entered through it. There will be included that the cabin composition of the composition o

tention soing to have lift the book possible. The least freeboard win NEW SCHOONER.—Varuna is the name of Mr. Geo. B. Hill's new schooner nearly finished in Palmer's yard, Noank, Conn. She is a fine, bold-looking ship, and quite up to the best in New York waters. Mr. Hill has had experience in keel yachts, and finds no good reason to go back to the board now going out of fashion altogether. His new ship is a keel boat 9fft, long on deck, Soft, load line, keel 80ft., greatest beam 23ft., depth 9ft., draft 9ft., keel, stem and post of white oak, keelsos deadwood, ceiling and deck-frame of yellow pine, frames, wales, planking of white oak, knees of hackmatack, deek of white pine, and fittings of mahogany. Mainmast 76ft., foremast 74ft., topmasts 40ft., bowspit outboard 24ft., flying jib boom boyond withe 14ft. mainboom 60ft., foreboom 28ft., maingaid 23ft., foregal 27ft., mastheads 7ft.

OSWEGO YACHT CLUB.—Wood Bros., of Boston, have nearly

14ft., mainboom 60ft., foreboom 28ft., maingaff 32ft., foregaff 27ft., mastheads 7ft.

OSWEGO YACHT CLUB.—Wood Bros., of Bostom, have nearly finished a deep keel sloop for Oswego owners. Length on deek, 30ft. Sin.; beam, 11ft.; draught, 6ft.; hold, 5ft. 6in. Ballast will be live tons inside and 3,0x0fts. lead on keel. We are glad to find our Lake friends taking to the Eastern style of build, in place of perpetuating should raft traps, copied from New York's fair weather fleet. There is not a finished to the last of the last properties and properties of the last properties and last properties of the last properties and last prope

ATALANTA.—Captain Outhbert, of Belleville, Ontario, is now here, overhauling the Atalanta, of America, cup fame, expecting to get on some private matches with New York yachts, as soon as in proper condition.

condition.

VOLUTE.—This keel sloop, originally the Boston Vision, has been sold by Mr. H. W. Eaton to Mr. C. A. Brown, who will lit her out at once at the Seawanhaka Basin, Staten Island. Mr. Eaton will build a

cutter.

DARE DEVIL.—In some remarks appended to Commodore Dillworth's letter last week concerning the Dave Devil, read "One of the ablest and 'smartest' hoats of her kind," in place of "smallest," etc.,

DOUBLE JIBS.—Recreation and Imperia, both formerly of New York, but now owned in Boston, will come out with double licad rig. One by one the sloops are disappearing.

ROSALIE.—Mr. Carson's sloop Rosalie, of Philadelphia, has set up a forestay. Split jibs or cutter 'principles in rig are steadily gaining in every yachting port on the Atlantic.

MAGGIE—This fifteen ton cutter will be shipned from Liverpool.

MAGGIE.—This fifteen ton cutter will be shipped from Liverpool about the middle of May.

CUTTERS.—Eight cutters were added to the Eastern Yacht Club last year.

PUBLISHER'S DEPARTMENT.

THE HAZARD POWDER COMPAN, WHO for so long have been located at No. 88 Wall street, recently moved into new and commodious quarters at No. 68 Pine street, New York, where they will be pleased to see or hear from their old friends. They still continue to manufacture all grades of powder as formerly, and we trust they will be oven more successful in their new offices than in the old ones.

more successful in their new offices than in the old ones.

CANNED GOODS.—We call attention to the advertisement of Wm. H. Cohen & Co., in this issue, who have all kinds of hemselically scaled goods. They are put up in handy form and are well nigh indispensable in the outfit of a yacht, or of hunting and fishing parties. They are a great convoince and enable the sportsman to partake of the luxaries of life while far from home.

BARGES AND MEARLS.—Messes, C. B. Wilkinson and John D. Leunon, who have done business under the firm name of Wilkinson & Lennon, have disorded partnership, and hereafter will do business sperately. They will both manufacture medals and badges, as formerly; Mr. Lennon remaining at the old stand, No. 142 Fution street, while Mr. Wilkinson is to be found at No. 8 John street, where each will, we trust, receive a generous partnerseg from sportsmen. The old firm had an excellent reputation for good workmanship.

THE STATEN ISLAND ATHLETIC CLUB, grounds, corner Bement and Henderson avenues, West New Brighton, S. I., will hold their spring games, open to all amateurs, on Saturday, May 20, 1882, commencing at 3:15 P. M.—Secretary, (Box 160, New Brighten, N. Y.)

The Parker Gun.

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Show Rooms: 97 CHAMBERS ST., N. Y. PARKER BROS., Meriden, Conn.

CRUTTENDEN FLY

This cut is an exact representation of this rod, which

CANNOT BE EQUALED FOR THE MONEY.

If has Nickle Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of Rod.

Tull Nickle Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tennons which never allow the joints to get stuck together by swelling of same if they should get wet. But stained dark, polished and would with cane and slik giving it that desirable appearance and the feeling of the high priced rods. The middle joints and tips are made from fine lancewood, left natural color, varnished and polished. This makes a handsome contrast to butt, and gives the entire rod a look of beauty which is a joy to every fisherman's heart while using it. The rod is well ringed throughout. Length ten and one-half feet, weight from nine to ten sing it. The rod is well ringed throughout. Length ten and one-half feet, weight from nine to ten and trouble of returning rod to be repaired. With short tip it makes an excellent Bass Rod.

Sent to any part of United States, prepaid, with one Trout or one Bass Tip for \$5.00. Trout Tips, each, \$1.00, Bass Tips, each, 75cts., Trout Tips, one-half Bamboo, each, \$1.25.

OHR READERS will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the Forest and Stream, but who would presumably be interested in the paper.

A BIT OF POLITICAL ECONOMY.

THERE are some chapters of political economy not included in the text books. One of these is printed in the FOREST AND STREAM to-day. Mr. Lucius L. Hubbard has taken some pains to gather facts and figures showing just what game protection in Maine means when computed in dollars and cents. There is nothing sentimental nor hypothetical in Mr. Hubbard's paper; it is a plain statement of facts and figures, based on the actual experiences of the writer and a number of his friends. The facts detailed and the conclusions deduced from them show most conclusively the economic value of proper game protection in Maine. What is true of Maine is likewise true of the game regions of other States to which sportsmen tourists resort, and Mr. Hubbard's paper will be found a very valuable document wherever the campaign is waged against the prevailing ignorance, stupidity and improvidence which permit the extermination of the game supply.

A MICHIGAN METHOD.

THE members of the Michigan Sportsmen's Association appear to have come to the conclusion that the present game laws of that State, although not altogether perfect, will answer every purpose for which they are intended, provided only that they can be enforced. At the last meeting President Holmes very wisely suggested that the efforts of the Association should be directed toward securing the needed enforcement of the law; and after some discussion of the subject it was decided to engage a suitable man "to act as Game Warden and Missionary, to spend his time in enlightening the people as to the objects and benefits of Game and Fish Protection, to form Game Protection Clubs, and secure obedience to the Game Laws by moral suasion where he can, and prosecute offenders to the full extent of the law where he must." The auxiliary clubs of the society were taxed for a fund to sustain the effort, and contributions from clubs and individuals invited.

At a meeting of the executive committee of the Associa-

tion, held March 8th, Hon. Cyrus W. Higby, of Jackson, a well-known worker in the cause of game protection, was engaged to fill the office named above for the current year. We are advised by Mr. Wm. B. Mershon, Secretary of the Association, that an effort will be made to start Mr. Highy on his important mission immediately, and to that end all Michigan sportsmen and the sportsmen who repair to Michigan from other States are invited to contribute to meet the necessary expenses.

This undertaking of the Michigan Society will be recognized by those who have had practical experience in such matters as most wise and commendable. The one great obstacle in the way of making our game laws respected is the far-reaching misapprehension of their spirit and intent by the great mass of the people.

So long as the dweller in the town and the dweller in the country are alike ignorant of what and why these laws are, so long will the best statute ever framed be practically a dead letter. And, on the other hand, just so soon as the people can be made to understand that the game laws are for the public good-in the widest and truest sense-then will they respect and obey them. To explain to the people of Michigan, to the farmers, land owners, lumbermen and pioneers, that the protection of game and fish is for the benefit of all, this is the important task undertaken by the Michigan Association, through their delegate, Mr. Higby. We shall watch the progress of his work with great interest; and we commend other societies in other States to watch closely too, with a view to imitating it if it shall prove successful, as we believe it will.

Mr. Higby might find an effective tract in the discussion, 'Does Game Protection Pay?" on another page of the present issue of this journal.

THE VERY LATEST.

THIS is an age of progress. In the arts and the sciences discoveries are being made each day which are more and more astonishing. We cross the ocean in seven days, the continent in the same space; we talk in our ordinary tones to people miles away, or listen to words that have been stored up in a little box for a week or a year. The man who uses the rod or the gun finds that the implements of the chase are constantly improving, but he sees, too, that with this improvement the objects on which these impliments are to be used are becoming so much more scarce as practically to neutralize the advantages which might be expected to follow from the use of superior weapons.

So we hear on all sides grumbling about the scarcity of game. People seem to feel that they are personally aggrieved because there are not now as many woodcock, snipe and ruffed grouse in our covers as in bygone years, while the few old-time hunters that are still to be found on the plains along the line of the railroad, talk sadly of former days of game plenty, when it used to be necessary to get up in the night and drive the buffalo away from the camp, when the deer could be jumped from every ravine, or found in the brush along every stream, when it was not an unusual thing for a band of antelope to walk up within fifty steps of the wagon in the gray of the morning, to see what the unusual object was.

There are still some localities where game is reasonably abundant in the West, and where a man who "understands himself," or even a tenderfoot, if he will submit himself wholly to his guide, may kill game enough to satisfy him, even if he be the veriest butcher that ever whetted a knife. Up to within a few years the valley of the Yellowstone River has been a magnificent hunting ground. Many varieties of large game abounded there, and, as it was always rather a bad Indian country, there was not enough hunting done by white men to very greatly reduce the supply. The progress of the Northern Pacific Railroad, however, has changed all this. The Indians have been run out and the white men have had a chance to do what they could toward killing off the game. The consequence is that a man must spend more time in the field and undergo a bit more of roughing it now than formerly, if he comes back with trophies of the chase. To one class of sportsmen, it is true, it matters little whether game be abundant or not. They can give just as big an account of their provess when they come home. Much has been said about the facility with which the sportsman draws on his imagination for the facts (sic) and the details of his experience, and it is believed by many that this species of the genus homo is, if the truth be told, little better than a liar.

A plan, however, has been elaborated by some Western genius (or rather by a concatenation of several geniuses) which | Game Exterminating Club.

does away with the necessity of any untruths on the part of individuals who go to Montana for the purpose of hunting big game. The prospectus of the "Yellowstone Valley Hunting Club," which lies before us, offers very exceptional advantages to the tyro who desires to have some basis of fact on which to found the boasts that he will make on his return to the East. The object of this club is to systematize game slaughter in the Yellowstone Valley "for the benefit of tourists and the world at large." It proposes to arrange matters so that the intending hunters can "at once proceed to the field, the habitation of that particular class of game as best suits their tastes and convenience; whereon they can best enjoy themselves, and gain the object of their visit without dissatisfaction or delay"!!! We are told that the active members of the club include "the most famous scouts, hunters and marksmen of the present day," and that each active member is expected to inform the secretary of any considerable amount of game that he may know of, the kind and amount, and all details connected therewith. secretary will then mail such information to each member -thus, if there is a herd of buffalo approaching from one direction, a band of elk known to be lurking in another. black-tail deer plenty on one range, or red deer unusually numerous on a certain stream, then in a short time each member has correct and full information in regard to game all over this vast hunting ground, and parties of any number can, under direction of the club and its scouts, approach and capture the game without loss of time or needless labor and expense. At each fall hunt the active members will take the field with a full supply of everything needful for as many visitors as may signify their desire to join." Everything, from guide down to gun and ammunition, will be furnished by the club—at a price—and the visiting member will be just taken in and cared for by the boys.

And how much do our readers suppose is the initiation fee to this prince of "sportsmen's clubs?" Only \$2. Any one may become a member by sending this trifling amount to the secretary, and this payment will entitle him to all the benefits "arising therefrom," whatever that may mean. You see it is not going to be aristocratic, this club; it is broad enough to contain the whole male population of the Union at \$2 apiece. Any one may belong. Think well of it, you who have never killed anything bigger than a red squirrel or a rabbit. never killed anything bigger than a red squirrer of a rabbit.

Could \$2 be better invested? Think well of it, you mighty
Nimrods from over the sea, making your annual pilgrimages
westward only to become the dupes of Buckskin Jo and
Rattlesnake Ben. Think of enjoying the advantages of the combined skill and experience of "the most famous scouts, hunters and marksmen of the present day"-and all for \$2. Can you resist it?

HUNTING MADE EASY. HE LESSON OF PRAIRIE AND MOUNTAIN, THE COMPLETE FRONTIERSMAN GAME KILLING AND INDIAN FIGHTING. In 12 Easy Lesson Practical Instruction. Price, \$2.

If the game should last more than one season we presume that the philanthropic Yellowstone humanitarians, having reaped a goodly harvest of crisp \$2 bills, will be in a financial condition to add some very desirable latest improvements to their self-denying scheme for the amelioration of the sportsman's lot and the benefit of tourists and the world at large. For instance, by an adoption of the burglar alarm systemwith which they are presumably familiar-they might intersect all the ravines, plateaus and hills in the Yellowstone Valley with wires, all converging to the "club room," so that every time a brute stirred anywhere in the territory covered by the club, an alarm would be given, and the exact whereabouts of the game shown by the indicator in the club room. A large stock of game might also be corralled in substantial enclosures, where the timid tourist could pump away with his repeating rifle, having, so to speak, a dead sure thing of it. Or the animal might be roped and tied to a post and then slaughtered by proxy. In this case the "sportsman" could advance, and, without soiling his kid gloves or disarranging his necktie, touch the rifle which is held, aimed and fired by an active member, thus sparing our tenderfoot friend the shock of the recoil. Thus the "sportsman" could kill his game on the same principle as that by which the Prince of Wales, when he lays a corner stone, touches the block with a silver trowel.

In fact the brain reels as it contemplates all the advantages which this club offers. There is only one thing against it, and this is that its life will be so short. The game will last just about one year. The title of the club should be changed and we recommend for its new style The Yellowstone Valley

DOES GAME-PROTECTION PAY?

Editor Forest and Stream

T has been asserted that the game which lives and breeds in the forests of Maine is an important source of revenue to many of the citizens of that State. This assertion is, doubtless, accepted as true by all who hear it, but often with only a vague idea of its force, and of the facts upon which it is based, and that too by the very persons who most often make the assertion. I herewith submit a few statistics, compiled and arranged with care that they might rather understate than overstate the average amount of money which is brought into the State for each moose, caribou and deer killed there during the summer season by tourists. The region covered by my figures is reached most easily via Bangor, and includes Moosehead Lake, the two branches of the Penobscot River, the Allagash River, and tributaries of all of them, an area greater perhaps than one-half the total area of wild lands in Maine visited by sportsmen for their game.

The table gives the results of a series of tours made by thirteen gentlemen, either alone or accompanied by one or more friends, and includes all of the tours ever made by them, together with all of the moose, deer, and caribou ever shot by them in Maine. For present purposes I shall confine myself largely to the moose. The reader will then be able to judge for himself how much the force of the argument is lessened by including in my calculations the other members of the deer family. It must be remembered that deer are found in greater numbers and in many more accessible places than in Northern Maine, while the range of the moose in the United States is now confined almost exclusively to a small section of that State. It may also be taken for granted that the majority of tourists, or "sportsmen," would give vastly more to be able to shoot a moose than they would to shoot a deer or a caribou.

I have gathered the facts herein set forth from such of my friends as could be reached conveniently, and their figures are in many cases taken from the record. In others they are approximate only, but are believed to be very nearly correct. I am convinced that if statistics could be had of all tours made through the Maine forests by sportsmen and others, in search of fish, game and recreation, they would show a much greater ratio of money spent to game taken than is shown by the following

TABLE OF TOURS MADE IN MAINE BETWEEN THE YEARS 1868 AND 1881.

	No. of tours.	No. of tourists com- posing parties.	No. of guides employed.	No. of days out.	Am'ts puid to Guides at \$2.75 per diem.	Total expense in Maine.	Large game taken.
A	3	9	5	78	\$314 OO	\$712.58	1 calf-moose 1 deer.
В	2	5	5	35	231 00	531 00	None.
$C \ldots \ldots$	1	2	1	14	33 50	157 00	None.
D	10	15	12	140	462 00	1,528 00	None.
E	5	48	24	101	1,381 00	2,880 00	1 bull-moose.
F	8	32	16	67	924 00	1,920 00	1 bull-moose.
G	10	27	17	260	716 00	1,820 13	1 cow-moose.
H	3	8	5	41	. 114 00	402 12	1 caribou, 2 deer. None.
ı	6	6	0	?	Nothing	380 00	None.
J	7	7	1	?	63 00	450 00	None.
¥	10	12	4	150	175 00	1,129 00	2 bull-moose.
L	2	7	7	34	411 00	843 46	None.
M	3	7	4	91	866 00	650 00	1 bull-moose, 2 caribou, 1 deer.
Total	65	185	101	1011	\$5,235 50	\$13,403:29	7 moose, 4 cari- bou, 4 deer.

From the above it appears that in 13 years 65 tours have been made by the parties mentioned, which is equivalent to one tour by each of them in each of 5 successive years. In 5 years then these parties spend an aggregate of 1,000 days in the woods, employ 100 guides, pay them \$5,000, expend altogether in the State over \$13,000, and kill 7 moose, 4 caribon and 4 deer. At this rate they would in 1 year spend 200 days in the woods, employ 20 guides, pay them \$1,000 and leave in Maine \$2,600, and would kill an average of 1.4 moose, ,8 caribou and .8 deer!

Unfortunately the means are not at hand of estimating with any degree of accuracy the number of sportsmen who visit the Moosehead region annually, either absolutely or as compared with the number of such as visit all other wild regions of Maine. It is almost beyond doubt, however, that this number increases from year to year, and if some method could be devised to ascertain it, even approximately, for each season hereafter, the result would doubtless be productive of good. The force of the above figures is, however, in no degree lessened by omitting these larger comparisons.

Let us now see how much two enterprising hunters get from a month's work in the early spring on the moose grounds. Four instances have been known in recent years where parties of two hunters each have thus taken, out of season an average of 20 moose per party. Suppose the carcasses of 20 moose weigh 12,000lbs. dressed, and that half of this meat

if saved and brought to market, would pring 10 each, or $200\ more-500\ in$ all. Deducting $60\ for$ expenses, we have \$250 as the net profits of each man.

According to our table, 20 moose, if killed by tourists in one season, would bring into the State over \$37,000, and distribute among 286 guides \$14,300, or \$50 per man!

The moose killed by tourists are in a great majority of cases bulls, for reasons not necessary to state. The "crust-hunter," on the contrary, is likely to kill as many cows as bulls, for he comes upon and exterminates entire "yards" of these creatures, in which the females are apt to predominate. Now, 20 moose, of which the majority are females, if unmolested by the professional hunter during the close season, ought in 5 years to increase by reproduction so as to number 100 by the end of that time.

Suppose we allow 10 per cent. for decrease from natural causes, and 20 per cent. for decrease from hunting by professionals at legitimate seasons, our herd would still contain Of this number 50 bulls and cows might be shot by tourists in 5 years, and, by the same figures as before, their capture would bring into Maine over \$90,000, distribute among the guides over \$35,000 of that sum, and still leave a nucleus of 20 moose to keep the supply good for generations to come, or until the forests of Maine shall have become farms and the moose driven away for want of shelter, which may a kind Providence prevent! In a word then, two hunters destroy in one month, at a profit of \$500 to them-selves, a self-perpetuating source of income, which, if protected, would yield to them and their brother-guides \$7,000, and to other citizens of their State \$11,000 yearly, for an indefinite time.

To place my deductions beyond criticism, I know I should include caribou and deer in them, not, however, at the rate of four of each of the latter to seven moose, because deer and caribou are very little hunted for their hides, in the Moosehead region at least. As previously intimated, it is difficult to form any estimate of the exact value of game as an incentive to tourists to bring their money into Maine, and of any one kind of game as compared with another. prefer to leave the matter to the general reader in the hope that additional facts may be elicited on the subject.

Not only is the game of Maine an attraction to very many of her visitors, but the fish is equally so, to perhaps a larger number of persons, and when we reckon, in our calculations, the number of fishermen who come annually to Maine's troutstreams, and the families they bring with them, to remain at convenient localities near by, the income thus derived by the people of the State must swell into thousands and thousands

or dollars annually.

This subject is almost limitless, but leads invariably to one conclusion; that if communities on the borders of the game-lands have their own interests and prosperity at heart, they will see the necessity of preserving this source of revenue for the general good, and not allow it to be selfishly destroyed for the benefit of a few. I sincerely hope that others who have a greater pecuniary interest in the subject than myself may succeed in their efforts to induce a hearty co-operation in the enactment of proper game-laws, and make co-operation in the engenness of respective provision for their rigid enforcement.

Lucius L. Hubbard.

Рипладелента's "Jack."—Our readers may perhaps recall the account published in this journal some time ago of "Jack," the English railway dog. It now appears that Philadelphia has just lost a well-known canine character of the same name, whose penchant for riding quite won the affections of a number of the street car drivers and conductors. Jack made his appearance some ten years ago on one of the Lancaster avenue cars, and being kindly treated by the employes of the road, soon became an habitual rider on the cars to and from the depot. One very curious thing was that the dog would never ride on any other cars than those from the Lancaster depot, and he never made a mistake, even when many other cars were in line. During his ten years of service as a streetcar dog, Jack had met with a number of accidents. He was 'laid up" with a broken leg six times; suffered numerous other like hardships, and at last met an ignoble end at the hand of some assassin. Jack was found the other morning shot and killed. His skin has been stuffed, to stand in state over the depot entrance; and the conductors and drivers have taken up a collection to go for a reward for the apprehension of his assassin.

CAMPING OUT .- The dealers tell us that people do not camp out now so much as formerly. They infer that this is so because the demand for camping utensils is not what it This is easily accounted for by the increased number of hotels and boarding-houses in some of the great hunting grounds where formerly it was necessary to camp. There are very many more hotels and lodges in the Adirondacks, at the Rangeleys, in Florida, and elsewhere, than there were five years ago. The tourist who has tried camping out once is much inclined to go to a hotel afterwards, if he can find one to go to. This is, in fact, the most sensible

RIFLE SHOOTING has made such progress of late years —a large portion—is sold at logging-camps and elsewhere at that the experts are now calling for more finely gradua 6 cents per pound. The profit would be \$860. The hides, targets. A letter on the subject will be found elsewhere. that the experts are now calling for more finely graduated

The Sportsman Tourist.

DUCK FLOATING ON THE BIGBY.

One Indian summer day in South Alabama 1 took "a float" on the Bigby River for ducks and other game. A float is a trij (down stream, of course) in a skiff or open boat, the edges of which are so stuck around with switch-cane that its inmates are concealed from view, while they can see out on every side.

My guide on this occasion was Kirk, of Martin's Ferry, a woodsman and hunter skilled in the use of paddle and oar. Poor Kirk has long lain in the grave, a vietim of the swamp fever, by the side of him of the river he loved so well, and this notice of him will seniand many a true sportsman of his merits as a hunter. Kirk was waiting for me at the river, his skill was ready, and with his assurance that the "river was just alive with ducks," I took my ssett in the bow, where I was to handle the guns while my guide steered the boat. Kirk had only his rille lying near him, while I had two guns, a heavy and a light one, the latter to kill the crippled game. We were to float down until we met Captain Ham and his little steamer, the Clara, when we were to be taken aboard with our boat and carried back to our place of embarkation. I obeyed my guide's injunction to "keep a sharp lookout," I closely scanned the river below me as it lavg glistening in the morning's sunlight; with my spyglass I looked under the overhanging willows and into the little nocks and corners along the shore. Very soon a fine flock of mullards emerged from under the willow that had hidden them from our view. One by one they came out, and gazed without any signs of fright at the green floating mass that our boat appeared to be. As soon as the plumage of these birds was plain, and the bright he merald green of the drakes' heads was distinct (for by this time the current had silently carried us near to them) I with one barrel on the waiter and the other on the wing, killed seven of these fine fowls and received most gracefully the compliments of Kirk upon my skill. All sportsmen know how animating a good beginning is in a day's sport, and how the expe

and just below Kirk discovered standing on the heights a flock of turkeys. We allowed our boat to float directly under them, so as to be concealed, then my companion went ashore, took off his shoes and tied his ritle to his back with his suspenders, and ascended the cilif in a zig-zag fashion. Almost as soon as he reached the top the sharp crack of the rifle told the doom of a big gobbler that was thrown down to me. Kirk's gobbler took away all appetite for killing mallards, but not for lunch, so we kindled a fire and fell upon our eatables with a hearty zest, while I was entertained with hunting stories. We got adrift again and floated lazily on, not earing much for the ducks that we would sometimes drift upon so noiselessly that we would eatch them asleep upon logs with their heads tucked under their wings. Our boat was nearly full, and often we did not disturb the slumbers of the solitary old drake as he enjoyed his siesta on a log.

bers of the solitary old drake as he enjoyed his siesta on a log.

As we pass Spring Bluff we hear the mellow notes of Steve Brown's horn vainly endeavoring to call back his dogs from the pursuit of a deer. The deer's crossing place on the river was only a quarter of a mile below, and Kirk took hisplace quickly in the middle of the boat, seized his oars and pulled hard and fast that we might intercept him. We were just in time to see a big buck take to water, and a few pulls on the oars brought us in range of him. Kirk threw up his rille, took steady aim and fired but only wounded him. We could travel faster than the deer in water, and the skiff was soon alongside of the deer, and Kirk took him by the horns. A deer sinks like lead when shot dead in water, and we had to maneuvre well to get him to the shore. Kirk proposed to mount and ride him ashore, as we were towed along, but to this I objected, thinking it best to gain a little time for Brown's dogs to come. The dogs soonarrived, and seeing the situation of things swam out to our assistance;

with their aid the deer was killed, landed, disemboweled and was soon lying with our game in the boat. We were soon adrift again, and long shadows on the Bigby's bosom told us the day was closing. Away below we heard the welcone sound of the Clara's double whistle. As the current carries us down our game is counted: Thirty-seven mallards, six teals, and one deer and turkey are our trophies. Two great black columns of smoke are now just below, and the steamer sweeps around the bend in full view. The broad, good-humored face of Captain Ham greets us from the roof, as he calls out, "What do you want?" In reply, I seized a dead mallard by the legs and waved it in the air. The alarm whistle was blown and the engine slowed, and as we ride the waves alongside, our friends, the officers, welcome us with hearty greeting. Old Captain Bennett, the mate, seized our rope as we threw it aboard, then I was jerked on the steamer by the arm and our boat hauled up. We return the captain's compliments to our skill by presenting him with the turkey, while good old Sam Rowe must needs treat us all around, except the captain. P. B. M.

THE TEXAS BLUE CAT.

THE TEXAS BLUE CAT.

THIS is as pretty a country about here as man may wish his eyes to rest upon or feast upon. To-day Mr. William Elliot, a citizen of this place, and myself, rode around the country some twenty miles, and I was continually flying off into raptures of admiration; even I, who am an old fellow who has seen a great deal of the world. Imagine a great rolling prairie, the smooth undulations sometimes rising so high above the surrounding country, that being on top of one, the eye has an unobstructed sweep for miles and miles, and miles, so that you seem to stand on the loftiest spot in the center of a round island in the sea, and feel that if you could mount a little higher, you could see the billows breaking upon the shores all around. So strong is the hallucination that you hear, or seem to hear, the tumultuous, confused roar of the waves as they dash themselves to pieces on the shore. Observe dark lines of forest crossing the rolling prairie in every direction; these are the timbers that mark the courses of the streams. The dark, rich green of the prairie is often broken upon by great beds of wild flowers, and the breezes from the "sweet south" are heavily laden with the odors stolen from there. As we stood upon one of these undulations, one of the mighty billows of the prairie sea, and looked over the subjacent country, I said to my friend Elliot: "Here was Paradise, and here was the Garden of Eden. Here Adam and Eve disported themselves, fresh from the hands of God.

'Adam, the goodlest man of men since born,

'Adam, the goodliest man of men since born, His sons; the fairest of her daughters, Eve.

The San Gabriel yonder was the true Euphrates." "And where," said Elliot, "was the bower?

'To the nuptial bower He led her, blushing like the morn."

"And where," said Elliot, "was the bower?

To the nuptial bower

He led her, blushing like the morn."

"It is gone," said I, "with Adam and Eve, but they could not take Paradise away with them. Thus we old chaps who set our whole hearts on money, can't pull it in the holes with us when we go."

But enough of this; let Adam and Eve take care of themselves; let's go back to the mutton. The soil of this country is jet black, of enormous fertility, and when it rains it sticketh, to be sure. It will easily produce sixty bushels of corn to the acre, seventy-five to 100 bushels of oats, (the latter igure is often exceeded) 400 to 600 pounds of lint cotton, and twenty to thirty-five bushels of owns, and twenty to thirty-five bushels of wheat. These agricultural resources, in connection with its unsurpassed natural pasturage for stock, make it a country in which we ought to live contented and happy. If a man cannot be prosperous in such a country as this, he should have bis ears pulled off and a poor dog's ears planted in their place. And yet he would discredit and bring disgrace on the dog's ears. The people about here are not only well to do, but many of them are very rich, and growing richer fast.

What a pity a man's foresight is not as good as his hind-sight! And yet if it were so, we would all be so smart that we could not cheat and swindle one another, and there would be rich together, so there would be no poor folks for usto lord it over and strut before, and this would make us very misrable. On the whole, it is perhaps better that our foresight in not so good as our hindsight. When I first saw this country in 1859, I could have bought every foot of land on which the bright town of Taylor now stands, and all in the vicinity thereof, for one dollar an arce or less; and the fellowselling it would have thought etcer from \$212 to \$40 an arce, and those neighboring the town much more. Large bodies cannot be touched at any price at all, those holding them believing that it is not possible to make better investments an

That is just what the German folks are doing. They seem

That is just what the German folks are doing. They seem to thrive here just like the carps.

The California salmon in Mr. Hovic's lakes are doing well, but not so well as the carp. Their introduction into Texas is an experiment whose success is not yet assured.

Mr. Ellici and myself finding ourselves on the banks of the San Gabriel, and having some tackle about us, couldn't resist the temptation to fish a little. We first got some angle worms by turning over logs in the forest; with these on the look we soon had a supply of minnows. Putting these on longer hooks and stronger tackle, we went to work in carnest. In about an hour we had a dozon fine black bass, two large blue cats, and several perch as big as a man's hand and bigger. With theses we concluded we had enough, and like true sportsmen, and no pot-hunters, we quit when the sport was just beginning to get warm. Elliot being a bachelor, and I being away from home, we gave away most of our catch. I reserved the biggest cat we had. I took it to a restaurant man and told him to cook it in the very best style he knew how, and that if the fish was large enough, to divide it in three several parts and cook each part in a variant way. I charged him to have the whole ready at cleven o'clock at night. He promised to do so. The fish weighed a fraction above nine pounds. My purpose in this was to test the eat, in a fair and impartial way, as to his merits as an article of food. My friend, Mr. Charles Hallock, in his "Sportsman Gazetter," frequently belittles the cat as being only fit for niggers. I had a suspicion, from my former experience of this fish in the woods, that he had been very unjust to the cat.

At eleven o'clock sharp Mr. Elliot and myself were promptly on hand, and so was the cat cooked in three variant ways: First—Micely baked, with dressing and sauces, garnished with celery and parsley; second—pain roas, on the griddle, with sait and pepper and a little celery; third, plain fried. We abstracted ourselves from all the world besides and addressed our

burnt, etc.
Taylor, Texas, April, 1882.

[Jordan gives three "channel cats;" the fork-tailed channel cat, Ichthælurus furcatus; the robust channel cat, I. robustus; and the common channel cat, or blue cat, I. punctatus. THE GUIDE'S STORY.

[From advance sheets of Mr. T. Sedgwick Steele's "Paddle and Portage."

[From advance sheets of Mr. T. Sedgwick Steele's "Paddle and Portage."]

66 YE never heerd me tell about the man who fust tried to make maps o' these 'ere woods, did ye?" said Hiram, as he tossed an extra log on the fire. "Wall, it's a long story; but I'll try an' load the cart'idge so the bullet won' go far, as I see Nichols a sblinkin' over there like an' owl at high meridian. It was 'long about the autumn of 1870, if I remember right, that a feller by the name o' Way cum up from down below an' took bourd in Greenville, foot o' Moosehead Lake. He was quite a spruce lookin' chap for these 'ere regions, an' though still under twenty-one years of age, had seen a deal o' the world in his little day. Wall, Johnny (that was his name,) had come to rough it, an' take his chances for life with the rest of us, though it was said he'd heaps o' money, an' mighty fine fixin's at home; but he was one of them advent'rous splinters as are allers flyin' round a-wantin' to see more an' more, an' git into wuss and wuss every step they go. Us boys was mighty busy that year a-loggin' an he en' yed the fust winter so rattlin' well annong us that he cum back the next season. When the snow got good an' deep in Jan'wary, an' snow-shoein' was just fine, we two arranged a huntin' trip an' started with our rities an' all the provishums we could truss on our backs toward Chamberlin Farm. We hunted about there some days, but finally made a hand-sled, straped our kit on to it, and by dint o' pushin' and haulin' made our way over the fruz surface o' Chamberlin and Eagle Lake to Smith Brook. Next day we pushed on to Haymook Brook an' as it cum on to rain we built a hut of bark and camped.

"Johnny was a restless feller, an' fur all tired out with the pull through to camp, thought if we were goin' to stay long and hunt we'd better lay in more provishuns. He was a plucky little feller, too, an' 'though not much used to the woods, could foller a 'spotted line' with the best 'oy existed by the story and the trip. I thought this a rather crazy fr

basket, an' fur all he'd spirit enough to rough it in other ways, he couldn't weather the trial of goin without his straight meal no-how. I did all I could do to hold him back, but it was no use; then I offered to go back with him, but he was bent on doin' the trip alone, an' leavin' me to rest in camp. So, after buryin' his part o' the kit in the snow, he stood ready to start.

"He did'nt want to go back the same way we had come, but had planned to skirt around back o' the lakes, you know—a nighty unsartin kind of bizness, boys, for a feller raised in a hot-house.

"But he plead so hard I finally give in to him, an' with the point of my raymod I myrked out his convenient with

"He did'nt want to go back the same way we had come, but had planned to skirt around back o' the lakes, you know —a mighty unsartin kind of bizness, boys, for a feller raised in a hot-house.

"But he plead so hard I finally give in to him, an' with the point of my ramrod I marked out his course in the wes snow. Says I, 'You see here, Johnny, that mark I jist made goes across Haymoak Lake to Stink Pond. Now don't you forgit it,' says I, 'to keep right on your course to Fourth Lake, for that there line leads into Little Leadhetter Pond, an' by a foot-track, will take ye to Chamberlin Lake, an' then yer all hunk. There's an old log camp on the Leadhetter, right there,' says I, diggin' the rod into the snow. 'Don't go further than that to-night. Camp there, no matter how early ye reach it; lie over till mornin' an then push on.'

"It was the wuss shoein' I ever did see, and I ought not love let the boy go, but I'd said yes, an' I'm not one of them fellers who goes back on his word.

"I buckled on Way's haversack, filled it with graham bread, stuck his hatchet in his belt, slung his rifle over his shoulder, and with many misgivin's saw him disappear in the woods. After he'd left I commenced to get kind o' nervus like, an' wish I hadn't let him go. Afore night I begun to feel terrible skittish about him. It it my pipe, cleaned my gun, cut boughs and bark from the trees to make our camp more snug, an' tried by fussin' round to get the lad out o' my mind; but 'twant no use—it didn't work wuth a cent. So buryin' the balance of our kit in the snow I started back to Chamberlin Farm by the old path and camped that night on Haymosk Lake, reaching the farm the next night. "You will bet boys I was searced to find that Way had not got in, but I thought praps he was restin' at the old log camp I had pinted out for him on the Leadbetter. John the 'toter' came along the next morning from the logging camp—don't you think, he hadn't seen a hair of him either. Wall, the way I got into them snow-shoes was a caution—the deer's hide wa

at my feet.

"Johnny! Johnny! says I, 'Brace up. Hiram's here, and yer all safe.' But he was so far gone, he skurce knew me. To his belt was tied a partridge: but this was all the provishums he had left, and with his half froze hands he could but jist hang on to his ritle. I took his gun an' haversack, an' goin' before broke down the big drifts with my snow-shoes, an' cleared a track for him to foller. But he was so werk an' benumbed with cold, that every little while he dropped in the snow like a wounded animile, an' begged me to let him alone.

the snow like a wounded animile, an' begged me to let him alone.

"'Hiran, 'he moaned, 'I can go no further. I am so tired. I feel so sleepy. Go on yourself, an' leave me herre. But I warn' a lad o' that kind. I knew pesky well what that there sleepiness meant; it meant nothin' less than a closin' of eyes once an' forever; he would have been cold, stiff, sone dead in half an hour. It didn't take me more'n a brace o' minutes to find a recognification. still, stone dead in half an hour. It didn't take me more'n a brace o' minutes to find a remedy for this. Whippin' out my knife f cut down a slick from one o' the young trees on the road, an' the way I laid it round that poor feller's body would have been a sight for the chicken-hearted, I tell you I beat him like an old carpet until his bones were sore. I fairly warmed him, which was jist what was wanted; au' what with whippin', kickin' him, an' at times cartin' him along on my back, we soon made mile after mile on our way. "Those were long hours flounderin' on through the snow; but at last we reached Chamberlin Farm, though to tell a gospel truth I felt we never would git in.

"As luck would have it there was a doctor there from East Corinth, an' with his help we were soon at work with snow gittin' the frost out of Johnny's hands an' feet, an' pumpin' life into him. In a week he was up an' about, good as new, an' hunted with us till the followin' April afore goin' out o' the woods. take me mo s. Whippin'

life into him. In a week ne was up an about, good as new, an hunted with us till the followin' April afore goin' out o' the woods.

"As I learned from him arterwards, Johnny had lost bis way between Fourth Lake and Leadbetter Pond. The snow there was over three foot deep, an' as the rain had clogged his snow shoes he turned into an old loggin'-road that he diskivered an' this took the feller right snack off his course. He follered the old road till dark, an' not comin' across the old log cabin I told him about, made for the base of a decayed tree, which he reckoned was fifty foot high at the least. This he set fire to, an' sat all night warchin' it burn down. Fallin' asleep towards moruin', when he woke up he found the merk'ry had gone a long way below zeo, an' that his feet, though wrapped in four pair o' socks had both frozen. What the poor feller suffered till found him must have been terrible. Afore leavin' Greenville that spring John Way made the first of a lot o' maps o' Mooschead Lake an' all its surroundin's. Arterwards he jined these all into one, which I used to sell on the boats, and this is the orthority for nearly all the late maps of these 'ere regions.'

A Colorado State Association.—Denver, Colorado, May 4, 1882.—A meeting will be held in this city on May 17, at No. 436 Larimer street, at 8 o'clock P. M., with a view to the organization of a State Sportmen's Association. The primary object being to bring the shooting and sporting men and clubs into intimate, social and personal relation, the arrangement for tournaments, etc.; and also to secure proper legislation for the protection of game, birds and fish during the seasons wherein it is improper to pursue or kill them; the encouragement of our citizens in their efforts to increase the varieties and numbers of game, birds and fishes, and the organization and encouragement of our citizens in their efforts to increase the varieties and numbers of game, birds and fishes, and the organization and encouragement of subordinate clubs and associations for the vigorous enforcement of laws for the protection of game, birds and fish,

Matural History.

CARDINAL REDBIRD WINTERS IN NEW YORK.

YORK.

In your issue of April 27, 1882, Mr. Geo. B. Badger records the notice of a female cardinal grosbeak (C. virginianus) in Central Park on April 16, under the title. "Birds That Have Come," and states he is surprised by the occurrence. In the New York Observer of March 10, 1881, Dr. E. A. Mearus, of Highland Falls, N. Y., says of this species: "It is a permanent resident in the park, where it breeds, building its nests in thickets beside the water, where a number of old nests are to be seen. Its note is a sharp, metallic chip, resembling that of several other sparrows, but sharp and clear, like the note of a water thrush. We saw redbirds in the park until December, and one was noted on the 18th of that month. Then I feared that the severity of the present winter ('80-'81) had driven them southward, for in my two following walks I saw none. But on January 12, while in the park with Dr. Wendell Prime, we heard the cardinal's note, and a moment after we obtained a full view of a fine male, as it flew across an open space." During the past winter I have visited the park on an average oftener than once a fortnight, and with one exception, have noticed the redbirds each time. If I had remained longer in the park, and looked for them at all carefully, I am very certain they would have been found then, for a little active scarching has never failed to reveal them.

In the early part of last May, while rambling through the

been found then. For a little active scattering has accordance to reveal them.

In the early part of last May, while rambling through the park with Mr. Horace Barnard, Jr., my attention was attracted to a little grove by a spirited chirping. We soon discovered two beautiful males of this species, with crests creet, and tails and wings spread, in full fight. After a desperate contest one was worsted and flew away; and it was only then that we noticed the pretty but less brilliant female which had been a silent spectator of the strife. After a little love-making these two disappeared in some bushes by short, jerky flights, plainly showing that they had discovered us. Later in the same month we again noticed these birds—perhaps the identical pair—nest-building, not far from the scene of action. During the following days I watched this bright couple very often, but further observations were stopped by my leaving town.

Louis A. Zerega.

111 East Seventy-second street, New York, May 1, 1882.

LOUIS A. ZEREGA.

111 EAST SEVENTY-SECOND STREET, New York, May 1, 1882.

[Many years ago we saw this species in New York city in the month of January, but had, until recently, supposed their occurrence here at that season to be wholly fortuitous. It is extremely interesting to have it established that these birds winter regularly in Central Park.]

The appearance of a cardinal redbird, C. xirginianus, in Central Park, April 16, as noted by Mr. George B. Badger, I do not think at all strange, if reference is made to it as an early arrival. I have known the bird to remain in Pennsylvania all winter, indeed, quite near to Philadelphia, and have trapped it when snow was on the ground in February. The coming of the scarlet tanager he mentions as seeing the same date, is considerably in advance of the usual time, of its arrival with us in Pennsylvania. I begin to look for him in ordinary seasons about May 1, and have found the orioles and the tanager to show themselves at nearly the same time. —Homo. -Номо.

THE WINTER IN NEW BRUNSWICK.

been bankrupt, unless he used his ammunition over as often as some sportsmen do the word "pot-hunter."

But I must return to the eccentricities of the weather. As

as some sportsmen do the word "pot-numer.

But I must return to the eccentricities of the weather. As
I write, the boys are speeding their horses over the frozen
surface of the Washademoak in a way that makes it difficult
for us to realize that one year ago to-day the steamer was
ploughing its waters. Snow lies in piles everywhere. On
the 15th of April, 1895, the farmers here put in acres of oats.
Verily the two months' sojourner in this country knoweth
but little of its climate, and it is safe to say that the present
winter is without a parallel in the memory of that meteorological encyclopædia—"the oldest inhabitant." Winter is
guilty of unwarrantable loafing. It is wilfully appropriating
the property of another season, but I do not expect the protest that is hereby filed against it to act as an injunction and
"stay further proceedings."
P.S.—I might also say that the only goose that has been
damaged by the subscriber this season, was boxed at 700
yards, with a .56-calibre rifle, after four misses at shorter
range.

Cambridge, New Brunswick, April 27.

[There must have been a defect in the manufacture of the shells, as we have used them and found them reliable.—Ed.]

DRUMMING OF "SPRUCE PARTRIDGE." DRUMMING OF "SPRUCE PARTRIDGE."

OUALL which I sent to Messrs. E. P. Walker and Hon.

Moses Webster, who live on the island of Vinal Haven, ten miles from the Main, bred and wintered there by the help of these gentlemen, who caused grain to be scattered about their haunts. I have three spruce partridges (Tetrao canadensis), two cocks and a hen—all very fine birds. I intend to give them a chance to breed. They are quite tame and live mostly on the foliage of the spruce; I also furnish them some grain. I shall watch their habits this summer, and if there is anything of interest I will note it down for those who feel an interest in the habits of birds. I should like to inquire of some of your readers if these birds drum like the ruffed grouse.

J. W. ruffed grouse.
Rockland, Me., April, 1882.

ruffed grouse.

Rockland, Me., April, 1882.

[In Forest and Stream of September 19, 1878, our well-known correspondent, "Penobscot" wrote: There is another bird of the grouse family whose drumming I wish to notice. This is the Canada grouse, or "spruce partridge," as the hunters call it. The male of this species is undoubtedly the handsomest game bird in New England, but they are held in little esteem from the fact that their flesh is so strongly impregnated with the odor of the spruce and fir boughs on which they feed as to be uneatable when sent to market in the ordinary manner, but if drawn and the crop torn out when first killed it is quite palatable. This bird selects a horizontal branch fifteen or twenty feet from the ground, and drums in the air while descending from the limb to the ground. This species of grouse are so utterly indifferent to the presence of man as to continue their drumming with a person standing in full view, often alighting within a few teet of the observer, and some of the older males are even belligerent, bristling up angrily at the intruder, and, if he feigns alarm and slowly retires, will chase him for some little distance. It is interesting to watch them while in the act of drumming, their wings moving with sufficient rapidity to carry them through the air with the velocity of an arrow; but their body all the time slowly settling toward the earth, alighting each time on almost exactly the same spot. The drumming is always performed while descending, the bird flying back to the limb in the ordinary manner. When thandled by the ruffed grouse under the same conditions, although it cannot be heard one-tenth as far, and for this reason I have always believed in the hollow log theory."]

THE WINTER IN NEW BRUNSWICK.

By some means the winter of 1891-82 has been "uncertainty of the control of the centre full previous to danuary 2 did not reach four incless. The thermometer dropped below zero on December 24, the only offence of the kind before January 4. On New Year's day the ground was as bare as it was in June, and the costumes of the skatters, who were cipojuga spin on the frozen lakes, seemed more in keeping with the day of 18th the snow was thrue feel deep and the thermometer stood 23 deg, below zero.

However, no sooner did '82 get fairly "settled down to business" that we began to realize that we were to have a clarge in the deal. On the morning of January 2 there were six inches of snow on the ground and more coming, mission scened to be the furnishing of drifting materia, and old Boreas made the most of the capital supplied whenever he took his turn at the wheel. We had dive sonowstorms on week. We were visited on January 29 by one of the worst snowstorms that ever swept over this province. The fail' was about two feet, but it was a ecompanied by a rise to down the ground and more coming, in the timber for an eurly spring, but it was a secondarile by a fail to the two feet already on the ground, and the ich all the rivers was more solid than it was in January. Business are also than the well of the partiarch's dow they 'could not get anything to cat on account of the snow, During a two days' hunt (Bood Priday and the lapartical country did not get anything to cat on account of the snow, During a two days' hunt (Bood Priday and the day following) 1 saw only iffeen geese and two black checks. I tried to take this awa solitary oblav which seemed to link that he had been out for some time, and Arch, thought a work of the control of the snow, During a two days' hunt (Bood Priday and the day following) 1 saw only iffeen geese and two black checks. I tried to take this away solitary only which seemed to lank the day following 1 saw only iffeen geese and two black checks. I tried to take this an DATE OF ARRYAL OF THE BROWN THRASHER.—New York, May 4.—Editor Forest and Stream: In to-day's issue of your paper, Mr. J. C. Cahoon gives the date of arrival of the brown thrasher (Hurporhynchus rufus) at Taunton, Mass., as March 29. My own records made in the vicinity of New York—mostly on Long Island—do not give its arrival before the last week in April. This year I did not see it until April 29, one month later than the record given above. During the two weeks, from March 25 to April 8, I was in the woods on Long Island every day and would have secured specimens of the bird in question had any arrived. On referring to some of the authorities I find that the following give the arrival of the brown thrasher (Harporhynchus rufus), as follows: Wilson—in Pennsylvania, from April 15 to 20, De Kay, in "Natural History of New York," and Giraud in "Birds of Long Island"—the end of April or the early part of May, and Baird, Brewer, and Ridgway in "North American Birds," Maynard in "Birds of Eastern North American, and Game Birds of New England," Stearns in "New England Bird Life"—give its arrival in new England during the last week in April and the first week in May, I would like to ask Mr. Cahoon whether he identified the bird by a specimen, or only by observation.—Wh. Dutchers, (Member Linnean Society of New York). [We have a note, which was recorded in Forest And Stream of April 4, 1878, of the occurrence of this species at New Haven, Conn., on March 20 of that year. This, as noted at the time, being about

H. Bex, taxidermist. Mr. Bex declared the animal to be a hair seal, and accounted for its being in Onondaga Lake, by saying that it probably came up the St. Lawrence and Oswego rivers, as many seals are shot yearly along the Gulf of St. Lawrence. and for long distances up the river. They are well known to be very migratory in their habits, one of them having been shot near the head-waters of the Mississippi three or four years ago, a fact which caused considerable comment at the time. Being also amphibious, they are able to make their way over land for considerable distances, an ability which would account for the passage of this animal from Lake Ontario to Onondaga Lake. The hair seal is an animal entirely distinct from the furbearing mammal of the same name, which is an inhabitant of the Arctic regions alone. The present specimen measures just six feet from tip to tip, and will weigh about 100 pounds."

to tip, and will weigh about 100 pounds."

VIRGINIA SNAKES.—Big Lick, Roanoke Co., Va., May 2.
—Editor Forest and Stream: An English companion and your correspondent would like very much to know about the snakes in this locality. We are both very fond of having a swim when it is extra warm and some residents advise that the water snakes are dangerous; others say that they are not the least dangerous. Can you help us out of our difficulty. Snakes are dark-browny gray, with light-yellow and black-checkered belly. At least we think they are having only seen them, but never eaught any. We are also told that they are called "mocassins." What can you tell us about land snakes around here?—Both Sides of The Border. [We presume that the water snakes to which you refer are merely the common Tropidonotus sipedon, or black water snake, which, although rather formidable in appearance to those who are afraid of snakes, is yet as harmless a creature as one would wish to meet. Still you may have "mocassins too, and we cannot take the responsibility of advising you as to whether you had better go swimming or not. If you wish to decide the question of species, why not capture a specimen and send it to the Smithsonian Institution at the shington for identification; or let one bite a chicken. It is highly probable that you have both moccasin and copperhead, as well as the rattlesnake, Crotalus durissus. All of these had better be avoided. We cannot give you any very extended comments on land snakes; no space for them.]

The Mink in Confinement,—Brantford, May 2.—Minks can easily be kept in confinement, but when permanently kept in small cages should never have water enough to bathe in or enough to make themselves wet all over. After four years' experience, I discovered what had been the trouble with those that I had had. They will get their fur wet clean through, and then go and lie down until they are dry; the consequence is, they get chilled and will soon die. Last spring I invited a veterinary surgeon to examine one that had died. He made a post-mortem upon it, and said that the liver and intestines were chilled. They always died in the same way, and afterwards I never gave them a drinking cup large enough to get into, and have never lost one since. I do not think they will breed in a small cage. I have a female mink over two years old, and she has never come in season. They must have space to run in or they cannot be increased. I feed mine the same as I feed the ferrets—bread and milk or fresh meat and fish of any kind. Treat them in this way and provide for them a good warm nest, and they are easy to keep. This is the time to get young minks. The above may be of some interest to those that want to keep them.—George Asii. THE MINK IN CONFINEMENT.—Brantford, May 2.—Minks them.—George Asii.

them.—George Asil.

Parasetes of a Kingetsher.—Au-Sable Forks, N. Y., May 2.—On April 29 I skinned a kingfisher, which was killed the day before, near this place. I noticed that the skin adhered much more closely to the flesh around the abdomen than is usual. On dissecting the body I found in the abdominal cavity, around the liver, a nest of worms. There were eighteen of them, the largest about as large as stove-pipe wire in diameter. One measured twelve inches in length; seven, ten inches, and ten, between two and three inches. In other respects all was apparently healthy. The bird (a male) was very lively, leading a long chase before shot.—CIARLES A. Bragoon. [As but little is known about the internal parasites of our birds, it is much to be desired that such specimens, when found, should be preserved in alcohol and forwarded to Dr. A. S. Packard, of Brown University, Providence, R. I., who, we are persuaded, would be very glad of an opportunity to study them.]

THE "NUTTALL BULLETIN."-By an inadvertence an error THE "NOTTALL BULLETIN. —By an induvertence an error crept into an answer to a correspondent in our issue of April 18, in regard to the publication of the Nuttall Ornithological Club. Mr. Ruthven Deane, since his removal from Cambridge, is no longer the treasurer of the Club, and at present all business letters concerning the Bulletin should be addressed to Mr. Charles F. Batchelder, Cambridge, Mass.

Floruda Gallinule in Pennsylvania.—Lake George, Warren county, May 3.—I have just received a fine specimen of a Florida gallinule sent me by express from Rupert, Columbia county, Penn., where it was shot four or five days age.—N. H. B.

"Forest and Stheam Bird Notes,"—An index and summary of the ornithological matter that appeared in the first twelve volumes of the Forest and Stream. Compiled by H. B. Bailey. For sale at this office.

ARRIVALS AT THE ZOOLOGICAL GARDEN, CINCINNATI, UP TO MAY 1, 1882.—Two common pheasants, P. colchicus; one gold pheasant, Thaumaica pictu; all purchased. One sambar deer, C aristotelis, two pintalis, Dafila acutio; one sooty mangabey, Cereocebus fuliginosus; all received in exchange. Two European hedgehogs, Erinaceus europaus; ono barred own, Symiton neddosom; two alluming turtle, C. serpentina; one yellow-bellied terrapin. Pseudemys ping turtle, C. serpentina; one yellow-bellied terrapin. Pseudemys six undulated grass parrakeets, Melopsitheus nodulatus; one barred tailed pheasant, P. recever; all presented. Three grizzly bears, U. horribidis; two noudads, Annotragus tragelaphus; six undulated grass parrakeets, Melopsitheus nodulatus; one bonnet monkey, Macacus radiatus; tive wild geese, C. canadensis; one axis deer, C. acas; one roseate cockatoo, C. rosei capilla; all bred in garden.—Frank J. Thourson, Supt. [Norg. It is believed that the alvoy is the first instance of the breeding of any of the cockatoos in the United States.—F. J. T.]

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One pair of Reeve's pheasants, Phasianus preness; our pair of Japanese pheasants, and two pairs of Bernicle grees, Bernicla leucopsis; all purchased. One Patas monkey, Cercopithecurbur, one raccoon, Procon lotor; two pairs of valley qualt, Lophortyz californicus; one Cooper's hawk, Accipier cooperi; one African stiver-bill, Mania cantans; three horned lizards, Phrynosoma cornulum; and one alligator, Alligator mississippiensis; all received by presentation. One zebu, Bos indices; one buffalo, Bison dimericans; and one collared peccary, Dicotyles torquatus; born in the garden.

Game Bag and Gun.

JIM CROW ON A RUNWAY.

THE new feature which I have noticed in recent numbers of the Porest and Stream, under the expressive caption of "Easy Reading Lessons for Little Readers," strikes me as exceedingly appropriate and wonderfully suggestive to every old devotee of the rod and gun, whose experience no doubt finds in these brief stories awakened and pungent memories. The lesson of the tired sentinel who kindled a fire on his runway, under the genial warmth of which he dropped to sleep, was so faithful a photograph of a little incident occurring near the city of Ogdensburg, N. Y., in years gone by, that on reading it I could not suppress a guffaw "all living alone." My memory ran in this wise:

A now prominent member of the St. Lawrence County, N. Y., Game Club was then regarded as an excellent shot with the rifle; and his love for deer shooting was always fresh and ready for a tilt. Swan and I were to put in the hounds and faithfully beat up all the ground between the city proper and the Eel Weir rapids of the Oswegatchie River, which was an old and favorite haunt for deer in the memory of the oldest inhabitants. When started by dogs the deer invariably struck a bee-line for the Depeyster swamp, to reach which they had to cross the Barnet road, across which ran a narrow bett of woods which three men could guard with fatal effect. Here repaired our heroic rifle shot, who for brevity we will call "Joe." He was in the center, with a subaltern on either side to watch and wait. The day was a cold and bitter one of November, and in that latitude, 44 degrees north, there was a persistent reach of icy fingers for human vitality.

A zig-zag route taken by Swan and myself was soon rewarded by a long whoop from our favorite ranger, soon

human vitality.

A zig-zag route taken by Swan and myself was soon rewarded by a long whoop from our favorite ranger, soon
duplicated by the other dogs, which in a few moments grew
in earnestness, suggesting that the spoor was fresh and appetizing. And away they went till the voices died in the
distance, when we paused to hear the welcome crack of rifles
at the Barnet road. After waiting and wondering what was distance, when we paused to hear the welcome crack of rifles at the Barnet road. After waiting and wondering what was up, we were surprised to hear our dogs giving lip in our rear, which signified that the old buck had been baffled at the road, and had taken a detour for a new attempt. Now, thought we, the old buck will run the gauntlet sure and come to grief. On they went, deer and dogs, and again the voices died away in the distance, and again we lent a listening ear for the crack of Joe's trusty gaining-twist rifle, duplicated by a fusilade from his subalterns. Nary a crack.

In this dilemma we determined to follow the trail and see why the deer had twice avoided crossing the Barnet road, and when we had reached within twenty rods of the highway, we came to where the old buck had paused to make sure of his surroundings, and had shot off in a tangent twice in succession. Of course we saw at once that our game was up, and on reaching the road were sharply interrogated by

In succession. Of course we saw at once that our game was up, and on reaching the road were sharply interrogated by Joe why we had not started a deer, "for I know very well there are deer in those woods,"

Of course it was our turn to speak above a whisper. "You stupid jackass! Twice we have driven a magnificent buck in sight of you, and you have frightened him from his favorite runway."

"Nonsense!" reiterated Joe; but with eyes snapping with anger, we bid him "come with us but a step and we will convince you."

anger, we bid him 'come with us but a step and we will convince you."

Just here occurred a solution of the mystery, for both subalterns affirmed that Joe stood in the middle of the road most of the time cutting pigeon wings and jumping Jim Crow to keep his feet from freezing.

Moral: Always lie low for black ducks, and never attempt to fascinate an old, way-wise buck with a clog-dance, if your appetite craves a hot, well-buttered tenderloin of venison for supper. This, Mr. Editor, is "an o'er true tale." H.

N. B.—We, i. e., the Mankato Fur Company, have laid out two large timber wolves and one wild cat the past winter, besides scaring several other wolves within an inch of their lives. Our State bounty on the wolf is \$10; on the wildcat nihil—although the latter is as sneaking a poacher on our coveted game as the former is on our farmer's sheepfolds. One of our wolves was a she one and had whelps sufficiently developed for identification, but not for the bounty. What a pity! and yet what real cause for congratulation. H.

Maneato, Minnesota. Mankato, Minnesota.

SELLING SNOW BUNTINGS FOR REED BIRDS.

SELLING SNOW BUNTINGS FOR REED BIRDS.

WillLE in New York city, a few days since, I observed a game vender on Broadway, near Twenty-second street, with an immense quantity of plucked birds of some sort strung in dozens, offering them to passers-by. Not knowing the species of small bird he had, without a closer examination, as all the feathers were off of them excepting those of the head and tail, and noticing that they were very fat, your correspondent put on the air of an uninitiated one, that he might more readily satisfy his curiosity as to their kind, and accosted the "game hawker" as follows: "What sort of birds are those you are selling, my man?" "Reed birds, sir." he replied, naming the price. "Why, how is that?" said I, "do you have reed birds in New York?" "Oh, yes, we often have them for sale; they came from Philadelphia." By this time I had examined the birds, and found them to be snow buntings. "Are you right sure they are reed birds?" I asked. "Yes, I am sure; they came from Philadelphia this morning, and I have just sold Purcell, below here, twenty dozen." I then opened on him, and told him whom he was trying to fool, and showed him very planily that reed birds at this time of year (May I) had not reached Pennsylvania or New York from the south, and when they did arrive they would not be in the plumage they appear in in September, when they are known as the reed bird. I made use of very plain language before I left the man, and told him the sale of such birds as he had in the spring of the year would not be allowed in Philadelphia even in autumn. I have since heard that a very large quantity of these "reed birds." were shipped to New York last week from the north, year would not be allowed in Philadelphia even in autumn. I have since heard that a very large quantity of these "reed birds" were shipped to New York last week from the north, and learned that families were buying them as reed birds. The sale of these, if I am not mistaken, is in direct violation of your New York law, and I must say I was astonished to see them vended so openly on your most frequented thoroughare. We Philadelphians do not elaim to have stopped entirely the illegitimate sale of game or harmless birds, but our boldest "hawker" would not have dared to display such a string of "reed birds" on the street in Philadelphia, and I can say he would not have gone many blocks without having been arrested.

Of what use are game protective associations or game laws

Of what use are game protective associations or game laws

if such open violations are allowed? So long as leading restaurants make it an object for pot-hunters to kill game out season and to procure for them birds they can palm off to their customers as "reed birds," we may look for a contrusance of a violation of the law. It should be made a finable offence for such to be found either on the bill of fare of any hotel or restaurant, or if obtainable sub rosa, to be in like manner subject to penalty. This furnishing on the sly of out of season game was tried in Philadelphia by restaurateurs, but unfortunately for the latter on three or four occasions it was placed before a paid detectice of the Philadelphia Sportsman's Club, and the proper fine was demanded and paid. Two or three cases of this kind in your city would have a very salutary effect. Can it not be done?

In about a week we may begin to look for the flight of warblers to pass through our latitude. With the warblers will swarm the specimen collector, canegun in hand. In the pocket of each, with his cotton and plaster of Paris, will always be found a printed copy of our game law, in which he will show you he is allowed to slaughter for scientific purposes. Millinery is a science, you know. Just now all kinds of little birds are in demand for that science. Property owners who are to be pestered by this horde should know there is a tresnass law they can take advantage of providing

owners who are to be pestered by this horde should know there is a trespass law they can take advantage of, providing they will post their orchards, groves and fields. Homo.

THE SEVEN YEARS' WAR.

THE SEVEN YEARS' WAR.

Editor Forest and Stream:

Thump! thump! umph! umph! umph! um-um-r-r-r-rWho the dickens is thumping my headboard in imitation of
the drumming of the ruffed grouse? Or did I dream it, as I
so often dream in the season of making a snapshot on a
rushing brown streak, and jerking my gun into position
awake suddenly to find it all a dream, and my bedfellow
carnestly requesting me to hand back a few of those bedclothes if I have got through performing with them? Complying with this reasonable request I am once more sinking
to sleep, when thump, thump, vibrates on my car as sensibly
as though produced in the room, instead of coming fifty
good rods through brush, window and curtain. This time
I arise in bed in time to catch the roll, and at once recognize
the return of one of my old favorites to the position where
he has held his court for several seasons, and near whose
throne one or more faithful consorts have usually produced
a fine brood of young.

brone one or more faintful consorts have usually produced a fine brood of young.

Drum away, old fellow; nothing shall harm you if I can prevent it. More than once have I lowered the death-dealing tubes as I recognized your long, strong pinions and light ashen hue flashing forth from the covert before the steady point of my faithful canine friends.

By the way recovery of conventralities tall we whether it.

point of my faithful canine friends.

By the way, can any of our naturalists tell us whether it is owing to any peculiar formation of structure that such powerful reverberations are produced in drumming? It seems hardly possible that mere inflation of the lungs should produce a sound so different from the flapping of the wings of the domestic cock. Then there is the peculiar far-away ventrilogual sound, so deceiving to the novice as to location, which the hird makes when perty approached while drum. which the bird makes when nearly approached while drum-

of the domestic cock. Then there is the peculiar fara-way ventriloqual sound, so deceiving to the novice as to location, which the bird makes when nearly approached while drumming.

Pray excuse me, Mr. Editor and brethren, if I "smole" an audible smile as I perused your issue of April 20th, and recalled in memory the varied and conflicting creeds of honor expressed by our "settin" brethren, and finally wound up with our friend "Nessmuk's" ingenious tale, narrating his brief experience in grouse wing-shooting, wherein experiencing great difficulty in accomplishing much more than to "make the feathers fly," and those generally attached to the birds, he virtuously abandoned the sport on account of the cruelty (to whom') attending it, and substituted therefor the beneficent and painless sport of hunting deer, interlarding this pleasantry by playing a huge pickerel "for two mortal hours" with no expectation of capturing him with such tackle when hooking him, but simply because he "felt in the humor for a racket," as he naively remarks. Would not the topt-fisherman with his stout rig have exercised more "humanity in the killing?" Or does the flying deen rever receive a fatal wound and yet escape the hounds in difficult following, causing the "bright-yed beautiful animal to hide away in thickets panting away its innocent life in fever and distress, while its murderer is breathing at ease."

Shall those that enjoy the beautiful display of graceful motion and intelligence exhibited by the finely trained pointer dog far more than the mere act of killing be deprived of this pleasure, and the deer-shooter be allowed to "Verily, consistency, thou art a jewel.

In fact, in the matter of painless killing, the much despised snarer far outranks us all, yet we hardly expect to see the present generation beat their guns, dogs and fishing tackle into plough shares, and adopt the snare and net, and of this glorious scheme. So the snarer is a myth, is he? The well-known preponderance in numbers of snared grouse in our large markets

word and "big bags" their battle cry, whether got by fair means or foul. Would they "run into a flock of a dozen grouse and clipping off only becopie of heads leave the balance within easy reach"—to breed in peace? Who has claimed that the man that clips the heads off grouse with a ritle was a pot-hunter? Not I, certainly, as i only thus style those that, scorning all fair play, nunder this noble game in positions that give it no chance to escape the dastardly act. Though, perhaps, "Nessuuk" and myself can only agree to disagree on some points, he has only my best wishes, and if the species of pot-hunter that he describes are the only kind that he ever encountered, heaven grant that he may never suffer contact with the genuine animal.

Ashfield, Mass.

OUTRAGE ON THE INNOCENTS.

OUTRAGE ON THE INNOCENTS.

I want to curse and ban. I want to use all the short, ugly, Saxon swear words from Cedric the Saxon, to Ho ker and Sigel. I want to exhaust the list of objurgations and bitter anathemas on the brutal heads of the featherless pigeon owls—begging the owls' pardon—who are netting and slaughtering the parent birds on the "roost" about the head of Indian Run, twenty-five miles west of Wellsboro. It is the same old criminal trick of heartless brutality that has pained and disgusted every humane sportsman and lover of nature for the past fifty years. Only in this instance the war of extermination is curried on with devilish skill and a deadliness that beats the old time modes of chopping down trees, shooting, and smoking with sulphur. On at least four occasions during the last thirty years, the pigeons have been driven from their nesting before the nests were fairly finished by the greedy, noisy onslaught of all the hoodlums who could beg, buy or borrow a five dollar shotgun.

They order it more wisely now. Before an egg was laid, there were two hundred salt-beds and nets ready for slaughter. But the roost was rather protected until the incubation was progressing; then the murder commenced. Three hundred nets are daily spread in a pigeon roost only three miles long by about half a mile in width. The guns keep up a constant fusilade, and there is a continuous fight going on between gunners and netters. The latter cannot get the birds "down" on their salt-beds when they are seared by shooting, and the gunners make it a point to shoot with an eye to the foiling of netters.

The most common ruse is for a gunner to make believe game constable, and take a netter in custody, or vice versa. But this game only worked for a day or two, when it began to end in fisticulfs (the more the better).

The roost is four miles above Ansley's, on Big Pine Creek, and twenty-five miles from Wellsboro. We sent our game constable, on the more the better).

extend into Troga county, and there is no Forcer county officer to act.

The pigeon-hawks seem likely to have it all their own way. A few of us, who would give money, time and nuscle to the cause of humanity and fair play to the birds, are not only utterly powerless, but we are looked on as pariahs and outcasts if we attempt to enforce the law, and our houses, and even our lives are hardly safe.

Something like this might reasonably be expected from Something like this might reasonably be expected from the ignorant fellow born in the backwoods and having it ingrained in his whole being that anything wild, wearing fur, fin, or feather, rightfully belongs to him who can catch or kill.

he without reasonable excuse? Is her What

Is no willout reasonable excuse? What of the "gentlemen sportsmen," the leading men among those who go to conventions to devise ways and means for the protection of game; the "true sportsmen" who, being in convention, turn their attention to a pigeon tournament trap-shooting? And all the leading sporting papers give careful reports of the hits and misses of the shooters. Oh, missevere!

Oh, miserer!

These poor, dazed, half-crippled things are taken from their young, transported by rail hundreds or thousands of miles, stuck into a modern "trap," and, as the poor thing gets weakly and doubfully on his wings, a double storm of leaden hail cuts him down, or misses, or wounds him unto

death.

It is true, perhaps, that a ten-year-old boy could chase the bird at "twenty yards rise" and cut him down with a bean-pole; but no matter.

Is it not a convention of "leading sportsmen?"

It is, no matter what an old graybeard of the woods may think or say, perhaps.

It is, no matter what an old graybeard of the woods may think or say, perhaps.

But, "gentlemen sportsmen," suppose you for once attend to business. Instead of encouraging these brutes by buying their birds at remunerative prices, leave your ten-bores at home and recommend a law something like this:

Section 1. It shall be unlawful for any individual, company, or corporation to kill or take alive any wild pigeon, or have the same in possession, save only in the months of September, October and November. For each pigeon so killed, taken, or had in possession contrary to law, a fine of fen dollars shall be enforced, the fine to be paid over, on collection, to the informer whose information has led to conviction. SEC 2. In case the culprit is unable to pay his fine, he

tion.

SEC 2. In case the culprit is unable to pay his fine, he shall expiate the same by incurceration in the county jail at the rate of one dollar per day. And it shall be the duty of any sheriff, deputy sheriff, or constable to go to any nesting or pigeon roost, when called on, and arrest and handcuff any offenders whom he may detect acting in violation of section one of this act, and also to seize and confiscate all guns, nets, or other engines of destruction which he may find within one mile of the nearest nest of the wild pigeon aforesaid.

SEC. 3. It shall be unlawful to use any wild pigeon at a so-called pigeon tournament, trap-shooting match, or any meeting where live birds are shot at on the wing. And it shall be the duty of any of the officers above named to attend such meetings, and arrest any and all who attend such meetings with evident intent to participate in the proceedings. Also, he shall seize guns, birds, traps and any and all of the furniture and fixings that he can find within 150 yards bounds of the trap used in the fournament.

This is very imperfect, but it would help.

There is no humane word that can be said in defence of slaughtering the innocent wood-folk in the breeding season. Postschert, May 2.—Our game constable has just returned from the nesting in Potter county. Having no authority in that county, the best he could do was to note and report. Here are his words: "The nests are placed more thickly on the trees than I have seen them in previous nestings, but the roost is not extensive—three and one-half miles by one-half mile. The nest, netters and salt-beds number 500 and more, with others constantly coming in. One package of ninety nets came in just as I left. No; they are not

'making it.' There is not a netter there who is making expenses, for which the Lord be thanked. The birds are getting seared and wary, and some old netters fear they will leave in a body."

Wellshoro, Pa

CAMPING OUT.

CAMPING OUT.

CCASIONALLY sportsmen find it necessary to camp out in the open air—that is, without a regular camp—sometimes by being lost in the woods, and sometimes in going long distances to new hunting or fishing chances, and at other times in following up the chase of moose, bear or deer. A few hint, about the best way to do it, from an old hunter, may come handy sometime.

We will suppose it coming on night and we traveling in the woods, with the clouds thickening and threatening an uncomfortable night, and ourselves tired and hungry, with very little to eat or to cover us from cold or wet. My first leokout would be to find a brook or spring of water; next a dry tree: then birch bark to kindle the fire with; then pick out a good dry place to make a bed on—any even spot a little elevated or slanting to let off the dampness.

Now we have all these. Cut down the dry tree, peel some bark, kindle a fire on the lower side of your camping chance. Now we have, some company, especially if there is but one of us—fire is a social element and gives a man courage, and keeps off wild beasts, busides warming us up. Well, if we have any tea with us we will now steep some and refresh ourselves if we have the time before dark. Now we will chop down a good sized hardwood tree, or if a good spruce is handy I had rather have it. I learnt this after having hunted for many years. An old lunter told me to try a spruce tree for camp wood. Says he: "It will cut very rauch easier, you can always find it, and it is pitchy outside and will get to going easy, and the last part of the night, when you brand up your fire, it will give you a good blaze." I found it just as he fold me, and ever after I cut spruce in preference to all other woods. Take three logs one foot or more through, buy four fire, and one spare log of your spruce rec, and you are rigged for a long as well as cold night. Now break boughs of the fir tree, a good large arm full, and shingle them thickly in front of your fire, for a bed, with the butts of the browse toward

warrant it not to tear, orders yet a find, if possible, in camping on the shore of a lake or river, find, if possible, a sand beach beside or near the mouth of a brook, as this will give you good water to drink, as well as a better chance to shoot game, (all kinds of game naturally seek a brook in a wilderness) and usually fishing is good at the mouth of

streams.

You can usually find dry drift wood on the shore, and you can turn your boat bottom side up for a covering, or you can spread your boat sail over a leaning tree for a tent, or you can shart up some poles each side of a leaning tree and cover them with any kind of evergreen boughs for a camp, or if there is no leaning tree handy, stick up a ridge pole and slant out two crotches each way in front to keep up the front end, then proceed to cover your camp as above; but on a clear night I prefer to build a good fire and camp down in front of it with no other covering than the starry-decked heaven.

J. C. R.

BETHEL, Me.

Summer is at hand, the time for tourists to lay their plans for the enjoyment of a brief or extended vacation during the hot days which will soon be here.

Many of those who enjoy camping out, and their numbers

Many of those who enjoy camping out, and their numbers are yearly on the increase, can recall the fact that they have often been puzzled as to what is absolutely necessary for a comfortable outfit. Writers on the subject differ. Some people delight in the employment of expensive guides and cooks, others to go on the economical plan; some prefer large arties of ladies and gentlemen, others to go solitary and one. The writer, who has had experience in summer amping, prefers a happy medium of two or three companys. And right here let me say, that no one should venture upon a trip of this kind unless he has first made up his mind be reconciled to any and every inconvenience, and to be easy at all times to lend a helping hand toward the comfort and happiness of his companions. A grumbler in camp is an abomination. The number who cann out would be largely increased were it known how cheaply a trip might be taken. It is for the benefit of the economical class that I propose to give figures.

largely increased were it known how cheaply a trip might be taken. It is for the benefit of the economical class that I propose to give figures.

A camping outlit should be light and compact, so that it

propose to give figures. A camping outfit should be light and compact, so that it may be moved from point to point without incurring any inconvenience. Nothing should be taken that can possibly be dispensed with. I give below what I have found to be the most convenient for a complete outfit; but many things which will be mentioned can be left behind without inconvenience. Every complete outfit should contain a tent, two army blaukets, and a piece of oilcloth to lay on the ground; knapacek, cooking utensils, and a few substantials to cook with; besides, a change of clothing and a few other things which a camper's fancy might dictate. A good tent is an indispensable article for comfort—it should be light; a good one can be made by sewing together three or four strips of light unblesched muslin fifteen feet in length; this, when put up in the form of an A tent, will be about seven feet high, the ends will resemble an equilateral triangle, which should be sewed to the ends of the roof, leaving an opening froz about six inches below the apex to the ground, which close them when required; there must be four strong eyets on each side of the tent, by which it must be fastened to rogs driven firmly in the ground; through the apex run a stout cord and tie each end firmly to a free, which does entirely away with the necessity of tentpoles. A tent put un in this way cannot be blown down and will shed rain as well as any ordinary cannot set not of three times the weight. It can be put un quickly. To make a comfortable bed, galher evergreen boughs and thatch them with the butts toward the ground and the tops overlapped; on this lay a piece of ordinary oilcloth six feet long, which is cheap, light, and

answers the purpose of a rubber blanket. A thick pair of army blankets make the best covering for night. A three-legged camp-stool is a convenient article. A serviceable table can be made from a yard of canvas with cyclets worked in the corners; fasten the corners by strong cords to stakes driven firmly in the ground, and you have a table good enough—although a little frail, it is nevertheless better than no table. The cooking utensils should be few and made to pack together as closely as possible—they should comprise a round 10-inch frying-pan without a handle, as a stick split at one end or a small pair of nippers will answer the purpose of a handle and occupies but little space; a 3-quart tin bucket for boiling, making some, heating water, etc., is better than an iron kettle, as it is light and answers the purpose admirably; a small coffeepot completes the cooking outfit, except a salt and a pepper box for table use. For his own convenience, each should have two or three 8-inch tin plates, a knife and fork, a large and small spoon, two tincups—the cups and plates should each pack together. In addition to the above-named articles, there should be a stout carving or hunting knife, a small handsaw, and a 2-pound hatchet; also, a pound or two of nails of various sizes.

The amount of provisions should, of course, be regulated by the number of your party, but whatever is taken should partake of the substantial—such as sugar, selt, pepper, a few pounds of flour and cornmeal, a ham or two, a few cans of corned beef. The delicacies—such as sugar, pepper, coffee, tea, and salt—should be kept in tin boxes; there should also be extra tin boxes and tin bottles, in which to store butter and milk, should you chance to camp near where they can be had. Each member of your party, should be provided with straps for binding the tent and blankets to the top, and also anything which is too large to be accommodated inside the knapsack. The entire expense of this outfit need not exceed fifteen dollars for each one, and when once p

es are properly cared for.

Always camp near some stream or lake, as good water is
not the indispensables; rise in the morning with the sun, Always camp near some stream or lake, as good water is one of the indispensables; rise in the morning with the sun, build up a good fire, which will very soon disperse all dampness and make your abode cheerful, after which take a good bath, and, depend upon it, you feel like a new man, and soon relish those eatables which you would hardly taste at home—in fact, it is about the only trouble you will have in camping—you can never get quite enough to eat, although your camp may be overstocked with provisions; you always feel hungry before meal-time.

One word more, and I am through with this already lengthy article. Select a camping ground within a mile or two of some farmhouse and supply yourselves with plenty of bread, milk, butter, and potatoes. You will generally find farmers glad to accommodate you and at a very reasonable price. Treat everybody civilly, and you will always receive civil treatment in return.

Geo. G. Stearns.

THE CHARMED WHITE DEER.

THE CHARMED WHITE DEER.

NE of the popular superstitions of the hunters of Pike county, Pa., is that the killing of a white deer will inevitably be followed by evil results to the one who fires the fatal shot. It is singular how deep the belief in this superstition is rooted, not only in the minds of the uneducated backwoodsmen, but among residents of the highest intelligence. The Indian tribes that once inhabited the Delaware Valley believed that white deer, which were very rare, were protected by a charm, and that their lives were sacred. There is a legend that a young Indian loved the daughter of his chief, and sought her as the queen of his wigwam. The Indian maiden returned his love. Her lover was one of the bravest of braves, and the hero of many a battle. He was a leader amone the young men of the tribe and more popular than the chief. The latter was jealous of the warrior, and though hating him bitterly, feared the consequences of having him removed from his path. The great love of the young brave for the daughter of the chief was seized noon by the latter as a probable means of destroying his rival in the affections of the tribe. The chief gave his consent to the wedding of the pair on one condition. This was that the young warrior should bring to the wigwam of his chief the dead body of a white deer as an offering. The lover, helieving this to be a delicate but emphatic rejection of his suit, returned without hope to his wigwam—for was it not as easy to pierce the hunter's moon with an arrow as to send a fatal shot within a white deer's heart? But one day the chief summoned the warrior to his presence. The soreerer of the tribe, an aged Indian, to whom all the mysteries of nature were deemed by the tribe to be an open book, was with the chief. The soreerer handed the young brave arrow would break the charm of its life and lay it dead at his feet. The warrior grasped the arrow, and declared that he was courageous enough to slay a white deer the silver arrow would break the charm of its life and lay it

in the air, and then sank into the white deer's heart. With a cry that resounded far among the hills the white deer fell dead, and its companions fled in terror to the woods. While the death-cry of the white deer was echoing about the lake, the young brave's arms fell powerless to his sides. His tongue refused to give voice. For days he drifted upon the lake. No succor came. He was powerless to end his sufferings by throwing himself in the lake. His dead and wasted body was found upright in the cance by members of his tribe after two 'moons' had passed. But other misfortunes followed the white deer's death. At sunset on the day the young brave fired the fatal arrow, the chief was found dead in his wigwam. An arrow projected from his breast. It was taken from his heart. Its tip was silver. The sorcerr was never seen again. The maiden, when her dead lover was found, leaped into the lake and found a grave beneath its waters. The tribe was never after able to cope with its enemies in battle, and was gradually destroyed. The lake is known to this day as White Deer Lake.

The superstition as to the white deer no doubt was received from the Indians by the early white settlers of the valley, and has been preserved by their descendants. Among those who believe in the fatality that attends the killing of a white deer is the Hon. William Westfall, of Lackawaxen. He was formerly Associate Judge of Pike county, and is the present representative of the county in the Legislature. Mr. Westfall disclaims been in any way superstitious, but relates several instances that have come under his personal observation. He says he never knew of more than three white deer being in the vicinity of this place, and two of them were killed.

White deer are always does. What freak of nature

being in the vicinity of this place, and two of them were killed.

White deer are always does. What freak of nature makes them white he does not know. The first white deer was killed in Lackawaxen many years ago by a hunter named James Van Gorden. This deer had roamed the ridges for years and the superstition had protected her. She was often seen and was "as white as the driven snow." Van Gorden did not believe that so valuable a lot of venison should be allowed to waste, and, not sharing in the popular feeling in favor of white deer, determined to bring her down. He hunted the deer season after season. He obtained many shots at her, but without effect. Then he made up his mind to try the charm alleged to be in the firing of a silver bullet. He molded a bullet out of silver, and with his rifle loaded with it, started on the white deer, but, says Judge Westfall, it was his last shot. A wasting disease attacked him, and not long afterward he died.

The second white deer remembered by Judge Westfall, it was his last shot. A wasting disease attacked him, and not long afterward he died.

The second white deer remembered by Judge Westfall was killed by a lumter named Moses Brink. He was hunting in company with Alamanzor Griswold, a well-known resident of the valley, and a Commissioner of the county and with Judge Westfall. Brink was heard to fire. The other hunters joined him. He said he had shot at a deer as it ran by him. The party walked on in the direction indicated, and a few steps away found a white deer dead. Brink declared that it was not the deer he had fired at, but it was evident that he must have done so. A few steps further on another deer of a grayish color was found. It had been killed with the same bullet that killed the white deer, being directly in range. The Judge says that not one of the party was ever able to kill a deer afterward. Honomissioner Griswold was subsequently killed by a load of stone falling upon him.

"The third white deer," says the Judge, "was never killed to my knowledge. I found

was subsequently killed by a load of stone falling upon him.

"The third white deer," says the Judge, "was never killed to my knowledge. I found the deer one morning on a favorite feeding ground, in compar, with a four-pronged buck. She was as large as a two-year-old colt, and her ears were as long as a mule's. The deer were not over ten rods away, the buck being the nearer of the two. I aimed at the buck, but changed my mind and fired at the white deer. She threw up her head gave me a sorrowful look, and then went to eating the grass among the leaves. The buck, of course, was a mile away by this time." I fired a dozen shots at the beautiful creature, but not one had any effect, and I leth the woods in disgust. That deer was well known to all the hunters along the Lackawaxen, and she finally disappeared. After my experience with her I sold my favorite rifle, the companion of years, and purchased a more costly one. But luck was against me. I had scores of the finest shots a hunter could wish for, but I could never kill another deer. I gave my gun away, and have not been in the woods for years. I know I am not superstitious, but I would not fire a fatal shot at a white deer for the entire gold fields of California.

The white deer which was proof grainst Judge Westfall's. California.

in a fatal shot at a white deer for the entire gold fields of California.

The white deer which was proof against Judge Westfall's bullets may have been the one which had no charm against the aim of Hornbeck Shimer, and his companions, Bevans and Frank in 1872. Shimer was a native of the Lackawaxen Valley. He made a fortune during the war. He had for some time been proprietor of the Exchange Hotel in Wilkesbarre, Penn., and was a well-known politician and sportsman. In the above year Lyman A. Bevans was a prosperous merchant of Port Jervis, N. Y. Henry Frank was a leading business man of the coal regions. In the fall of 1872 the three were camped in the mountains a few miles back of Lackawaxan, deer hunting. They started a white deer, and all three succeeded in getting a shot at it and killed it. Ill-luck attended every one of the party afterward. Shimer became an invalid, and died a miserable death two or three years afterward. His affairs were badly involved and his property dissipated. Henry Frank failed in business in 1875, and died of smallpox. Bevans became a bankrupt in 1878, and last fall committed suicide in an outhouse of his residence in Port Jervis by blowing his brains out. These misfortunes would have no doubt overtaken the men if they had not flown in the face of superstition, but it would be impossible to make the old-time Pike county hunters believe that they were not directly due to the killing of the white deer on the Shohola hills.—Correspondence New York Times.

Morning Sun, Iowa, May 1.—Game has been unusually plenty here through the full, winter and spring, and the outlook is certainly good for fall chicken shooting. Chickens are more plenty than they have been for years in this locality. Quail are rather scarce, but enough to give us some sport next November. Wolves seem to be on the increase here, and several have been killed in this county in the last few weeks. Ed. DeLong killed an old one and captured seven pups. The scalps are worth five dollars each, paid by the county. Ed. feels rich; wants to hunt wolves all the time.—Mark

BIG GAME DESTRUCTION

THE work of the skin-hunters is beginning to attract the attention of the press of the West. We copy below some editorial remarks from the Madisonian, published at Virginia City. As will be seen from the statements made, the skin-hunters have invaded the National Park itself, and are now carrying on their butchery of game, which is supposed to be protected by the law which probibits killing game within the limits of the park. A correspondent assures us that the statements of the Madisonian are not overdrawn. This is a matter of national concern. It demands the immediate attention of the National Government at Washington:

overtrawn. It is a matter of national concern. It demands the immediate attention of the National Government
at Washington:

If Congress could ever be brought to consider anything
that is not flavored with political chicanery, there might be
some hope that a stop would be put to the wholesale destruction of large game which is constantly going on in the
plains and mountain regions. At the rate at which buffalo,
elk, deer, moose and other game are just now being slaughtered for their hides and pelts, it will not be long until the
animals will be utterly annihilated, and their existence only
be known as matter of history. Even now, the elk and
deer are disappearing from the most accessible points under
the fierce fusilade for pelts, and the destruction that is going
on in the more remote points is something fearful to contemplate. We are reliably informed that even in the National
Park, almost under the nose of the assistant superintendent,
the slaughter of these animals is being carried on with
amazing rapidity, notwithstunding the law prohibiting the
killing of game within its limits; and furthermore, that a
system of driving the bands into basins where the deep
snows prevent their escape is being extensively practiced.
Some two or three weeks ago a party of hunters succeeded
in correlling a band of fifteen hundred or two thousand elk
(said to comprise nearly all of that species in the park) on
the east fork of the Yellowstone, where they were slaughtered as fast as they could be skinned, and the carcasses left
to rot on the ground, the pelts being all that the hunters
were after. That this wanton destruction is inimical
to one of the best interests of the mountain regions is too
plain to need establishing by argument, and that stringent
measures for its suppression are necessary is quite as apparent.

Under present laws, efforts to prohibit it are utterly futile,

plain to need establishing by argument, and that stringent measures for its suppression are necessary is quite as apparent.

Under present laws, efforts to prohibit it are utterly futile, and will be, so long as the army of so-called hunters can find a market for the hides and pelts. What is needed is a law that will make all who are found with any parts of these animals in their possession equally amenable to its penalties as the killer himself. Delegate Post, of Wyoming, recently introduced a bill in Congress—the provisions of which have already been printed in the *Matisonian—which, in our opinion, would, if it became a law, effectually stop the inhuman business. The press and people of Montana—and, indeed, of all the Territories, should urge its immediate passage, if they would preserve in the National Park and other mountain resorts one of their chief attractions. The people of the Territories get but little good out of the traffic in pelts, and even those engaged in it here make a more precarious livelihood than they could earn in other pursuits. In fact, the encouragement of them in their nefarious business is only driving them into a state of semi-savagery, leaving them but little better than the Indians, And it is well-known that a large moiety of the tourists' travel to the mountains is drawn there by the abundance of large game; as many, perhaps, as by the attraction of the geyers and natural marvels of Wonderland. Af we have said, Congress is slow to act on questions of this sort, unless spurred to action by the people of the sections directly interested. We trust our delegate will urge to the utmost the passage of Mr. Post's measure, and that the press of the Territory will unite in seconding the effort to prevent the wanton and useless butchery which threatens the extinction of the noblest animals that roam our broad domain.

Scaipel Scaipel—Editor Forest and Stream: Your poetry in last week's issue was evidently not written by a snipe shooter. The lines contain internal evidence that that "O." did not know what he was writing about. 1. The snipe is not a "brown" bird. 2. You never hunt snipe with the gale in your teeth. Every "practical sportsmun" knows that on a windy day snipe are very wild and fly in the face of the wind. Hence if the gunner is going against the wind, the birds which are flushed will rise out of range and fly directly away from the shooter. 3. A dog is of very little use in snipe shooting on a windy day.—Scolotax. [There are several kind of people in this world; and the writer of the foregoing is one kind. He may be a good snipe shooter; but he has evidently never been under the influence of the divine afflatus. His soul is as barren of sentiment as his criticism of our contributor's sportsmunship is fallacious and uncalled for. It is very fine to be a good snipe shot; but it is better to be a snipe shot and a poet too. "C." has proved himself a poet already; here is a private letter which came with his poetry; and we think it conclusively proves that he knows how to shoot snipe. This is what he says: "Editor Forest and Stream: I have just returned from a day and half's snipe shooting. The wind was high, so also was the water; the birds were scarce, uneasy and wild. With my lfe; only missing two that I had a ghost of a chance of killing; and killing several at surprising distance—sixty yards and over by actual measurement, and they were texisters I tell you. My total bag was twenty-one birds. The impressions I received I have endeavored to express in the inclosed.—C." Now if "Scolopax" can give us any further points on how to run the paper, we should be pleased to hear from him early and often.—Ed. F. & S.]

St. Paul Gun Club.—The St. Paul, Minn., Gun Club is reorganized for 1882, with the following officers: Dr. Richeson, President: Paul Engels, Sceretary; John Burkhard, Treasurer. The club has been organized five years, and during the shooting season has never missed its weekly meeting for practice with the gun, except when storms prevented outdoor sport. The club is as vigorous to-day as when first organized, thanks to the kindly interest of its president in its affairs.

Camping Grounds on the St. Lawrence.—Clayton, N. Y.—For the benefit of "Green Horn," (in No. 13) I will say he can have good fishing and camping grounds near here, or nearer Eel Bay in September. Eel Bay is distant about five miles from here, Utica and Black River Railroad here. Cannot say much for the wild fowl shooting, date is too early.—G. M.

Sea and River Hishing.

TO PALEMON.

"I write this while Cleora is angling by my side under the shade of a spreading elm that hangs over the banks of our river. A nightin-gale more harmonious even than Strada's is serenading us from a hawthorn bush which smiles with all the galety of youth and beauty;

Fanning their odoriferous wings, dispens Native perfumes, and whisper whence they stole
Those balmy spoils.—Milton.
Whilst I am thus enjoying the innocent luxury of this vernal

whilse I am thus enjoying the innocent fuxury of this vernal delight, I look back upon those scenes of turbulence, wherein I was once engaged, with more than ordinary distaste, and despise myself for ever having entertained so mean a thought as to be rich and great. One of our monarchs used to say that he looked upon those to be the happiest men in the nation, whose fortune had placed them in the country, above a high constable, and below the trouble of a justitle of the peace. It is in a mediocrity of this happy kind that I here pass my life with a fortune far above the necessity of engaging in the drudgery of business, and with desires much too humble to have any relish for the splendid baits of ambition."

-Letters of Sir Thomas Fitzosborne

WEST VIRGINIA'S SHOWING.

relish for the splendid baits of ambition."

—Letters of Sir Thomas Fitzosborne.

WEST VIRGINIA'S SHOWING.

FACTS relating to either fin or feather never come amiss to a sporting journal, and as other States are reporting, why not West Virginia!

Last fall Death held a carnival at the expense of our game fishes. He came not in his usual garb of a skeleton, but called in the form of a seven months' drought, taking a deal of our black bass and brook trout to satisfy his pitiless cravings. It is difficult to say what proportion of bass were taken, but at least two-thirds of the trout have disappeared. The little speckled fellows were not given time to "vanish like the aborigines before civilization and settlements," as you say they do, but simply "exhaled and went to heaven," or passed in a twinkling from the sweltering pools to the maw of Zippy Coon. The waters evaporated, leaving the trout to rot on the dry rocks or fall a victim to "Zip" who, by the way, is a great lover of fish and an expert at catching them. The odors of decay were noticeable several hundred yards to windward of the creek beds. The clear creeks, with a usual flow of several feet of the purest water in the world, were dry except in shallow pools for miles and miles, the headwaters barely running and furnishing a retreat for what trout succeeded in escaping the sunstroke, or, what is worse still, of being roasted alive! Those who sniffed the tainted gale can best form a conception of the mortality among this nitherto populous tribe of noble fish.

Yet, despite all this, we still have plenty of trout left—and to spare! Some were saved in Cherry River and some escaped from the creeks to the friendly protection of Meadow River. Last April even the little spring branches among the Sewells had a good many trout in them. They, too, are numbered among the things that were; and those who claim a knowledge of such matters say it will take three years to restock our streams as they were before the drought's et in. The mild winter and early spring give pr

travelng over the mountains to shake it down, taken a "dessert" of trout at midnight in the Clear creeks or in Cherry River.

The taking of the bass from their almost waterless prisons was fun for the people and the coons, but death to the fish. Down this way it was not so bad, as the water was a little deeper, but you ought to have seen the more fortunate ones swimming around with umbrellas raised to keep the sun from scorching their dorsal fins. Some I caught in October and November must have loaned out their sunshades during the "heated term," as, when taken from the water, they were as black as Africa. Often I fished for hours without getting a "rise," when, planting my foot on a half-submerged rock, out would pop two or three bass, and probably a catish—hiding from old Sol as he fairly simmered the few inches of water over their heads. Either my sense of hearing was dulled by the heat, or the water was too warm to babble and murmur audibly over the rifles. You think I didn't really see the river smoking several times? Well, maybe it was only the uprisings of "the gentle dew" that didn't "fall upon the place beneath" for more than seven full months at a stretch.

The close season began on the 1st instant, lasting until the

The close season began on the 1st instant, lasting until the 15th of June, and whilst eking out the 1,080 intervening hours. I take the liberty of catechising a little. It has been my habit—Erank Forrester's idea, though—to string the bass and keep them in the water. But I don't like the method. They choke each other to death in a few hours and turn all sorts of colors. In the evening the string often resembles an inverted bouquet of flowers—black, amuddy yellow, spotted, flowered and "ringstroked, speckled and grisled." Yet, though displaying every known variety of markings, the fish are firm and palatable. Tell me, somebody, 'Is it better to keep them dry in the creed of a warm summer day, or let them struggle on a string "from early morn till set of sun?" The close season began on the 1st instant, lasting until the

And yet one other question, please, How to cook him? In the Sportsman's Gazetteer you say he "is sweet, tender and juicy, and, when well cooked, makes a dish fit for a king." Corpect. But "well cooked, makes a dish fit for a king." Corpect. But "well cooked, makes a dish fit for a king." Corpect. But "well cooked" means a good deal more than some of us fully comprehend. We are not all Delmonicos, hence many failures are made in the preparation of this capital game fish for the table. We have both the large and small-mouthed species of bass.

In 1877–8 the streams of West Virginia were stocked as follows: First Congressional District, California salmon, 2800,000; Inad-locked salmon, 8,000. Second District, amixture of 300,000 trout, land-locked or California salmon. Third District, trout, 11,000; black bass, 983; California salmon. Third District, trout, 11,000; black bass, 983; California salmon. Third District, trout, 11,000; black bass, 983; California salmon, 213,000. The trout have gone to the different headwaters, the bass are very plentiful, but the hand-locked and California salmon—where are they? I hardly ever hear of one being seen. Last year (1881) the distribution of fish was as follows: First District, land-locked salmon, 10,000; German carp, 714. Second District, land-locked salmon, 2,500; trout, 7,000; carp, 1,080. Third District, carp, 158; black bass, 545; land-locked salmon, 6,000; silver perch, 125; wall-eyed pike, 15; and sturgeon, 6. When the salmon are heard from you shall certainly be apprised of their doings. It is said that President Arthur is very expert with the rod and fly. If he comes to the White Sulphur this summer, as the papers report, fine sport is awaiting him if he chooses to indulge. Instead of vetoing anti-Chinese bills in the dings city of Washington he can veto the life-and-liberty struggles of Messrs. Bass and Trout in the limpid waters of Greenbrier and Cherry rivers. Though differing widely in our political tastes, yet "verily we be brethren" when it comes to the love o

that.

Lewisburg, W. Va.

THE LONDON FISHERY EXHIBITION.

WE have received a copy of the message from the President of the United States to the House of Representatives, transmitting a communication from the Secretary of State, relative to the International Fisheries Exhibition to be held in London in May, 1883. The President approves the suggestions contained in the report, and recommends that favorable action be taken on the subject at the present session of Congress, in order that there may be ample time for making the necessary preparations.

Secretary Frelinghuysen informs the President that he has received a telegram from Mr. Lowell, the United States minister to England, stating that a formal invitation will be extended to the United States by the British government to participate in said exhibition, and that in view of the importance of the fisheries interests of this country, the widely extended and growing exportation of our maritime products as food and for use in the arts and manufactures, and the constantly increasing attention which our citizens are giving to the subject of fisheulture, it would undoubtedly be a wise and profitable measure for Cougress to make such provision as would enable the United States to take a part in the proposed exhibition at London commensurate with the interest of the country in the subject. He then recommends that \$50,000 be appropriated to enable the Secretary of State to take the necessary steps for securing the representation of this country at the London International Pisheries Exhibition of 1883, by contributing illustrations of the condition and products of our domestic and ocean fisheries, and of the progress of fisheulture in this country, and also by sending competent persons to the exhibition.

On April 7, Mr. Frielinghuysen writes to Prof. Baird and says: "It will give me gratification to communicate to Mr. Lowell, by telegraph, your readiness to organize an American Exhibit, so that he may make use of the information before the date of the meeting at the M

Washington, April 15.

Lovell, Minister, London:

Answering dispatch of 20th March, Commissioner Baird will prepare national exhibits if Congress appropriates therefor this session. Desirable that formal invitation be soon placed before Congress. You may express our willingness to assist, and when invitation is made telegraph immediately.

FIGLINGITYSEN, Secretary.

London, April 20, 1882. (Received April 21).

Lord Granville writes he will make application to United States Government on behalf of International Fishery Convention.

Lowett, Minister.

The draft of the resolution presented to both houses of

Congress is:

JOHNT RESOLUTION CONCERNING AN INTERNATIONAL FISHERY
EXHIBITION, TO BE HELD AT LONDON IN MAY 1883.

Whereas the government of the United States has received
official intimation from that of Great Britain that it is proposed to hold an International Exhibition of Fish, Fisheries,
and Fish Products at London in May, eighteen hundred and
eighty-three, whereat the representation of the United States
is invited:

And whereas also by its aution as a government, and by

is invited:

And whereas, also, by its action as a government, and by the active enterprise of merchants, fishermen, and inventors, and the researches of men of science in this country, the United States has attained and holds a prominent place in all that relates to the development of the great fisheries industries, the extension of the great gountercial relationship with

other countries based on the exportation of prepared fish products, which now forms an important factor in the national wealth, the artificial propagation of food-fishes, and the restocking of depleted fishing waters; and it is expedient that the industries and interests thus concerned should be adequately represented on the occasion, Therefore, be it—
Resolved by the Senate and House of Representatives of the United States of America in Congress assembled. That the invitation of the British Government be accepted; and that, under the auspices of the Department of State, the United States Commissioner of Fish and Fisheries he, and he hereby is, instructed to prepare or cause to be prepared a complete and systematic representative exhibition of the fisheries of the United States, in which shall be shown the following: A series of models, maps, and charts showing the location and extent of the various fishing grounds; a full series of the principal sea and fresh-water fishes, shellfish, sponges, etc., and other useful inhabitants of the waters of the country (either as specimens, casts, or illustrations); specimens of models of the various kinds of gear, apparatus, boats, etc., used in their capture; a full collection of articles showing the commercial and economic uses of the fishes and other water animals, which shall include, besides the samples and specimens, models and other representations of appliances used in their preparation and preservation for food as well as for purpose of use and ornament, such as dried, smoked and canned fish, etc., oils, fertilizers, manufactured shells, corals, sponges, etc.; also a full series of articles, or models thereof, showing the economic condition of our fishermen, such as clothing and other personal outfit, models of dwelling houses, etc.; a collection of documents showing the present condition of fishery legislation; also specimens, models, and illustrations of the apparatus used in the artificial hatching and breeding of fish, oysters, etc.; models of the linear provi

the Exhibition.

SEC. 5. In order to defray the expenses of the collection, preparation, and packing of the exhibit authorized, its transfer from and to the United States, its installation and supervision in London, and such other incidental expenses as may of necessity arise, there is hereby appropriated out of any money in the Treasury of the United States not otherwise appropriated, the sum of fifty thousand dollars or so much thereof as may be required, to be immediately available, and to be expended by the United States Commissioner of Fish and Fisheries under the direction and regulations of the Department of State.

THE SHAD NETS OF THE CONNECTICUT.

THE SHAD NETS OF THE CONNECTICUT.

A S shad will be a household word with people of the Atlantic coast for a couple of months to come, it may not be uninteresting to the many people who eat them to know something about the means employed in catching and the men who, during the spring go shadding. In this article I shall treat of the mean, nets, boats, and means of capturing the Connecticut River shad.

The shad fisherman's outfit at the commencement of the season comprises a boat of from twelve to eighteen feet in length, oars, lantern, set of rubber or oiled clothing, rubber boots, thick clothing and a gill net. On the bank of the river he erects his reel, or lays two long smooth poles, supported by cròtches about two feet high upon which the net rests when not in use for fishing.

The shadmen fish in pairs, one 'tending boat, the other the net. The boatman, unless he has an interest in the net, receives one-third of the profits for his share, while the owner of the boat and net takes the other two thirds, but the expense of the boat and net make the profits about equal for the two men. The nets vary in length, depending on the locality where they are used. At Saybrook they are from one hundred to one hundred and eighty rods long, while from Middletown down to Essex they run short of eighty rods, and from Middletown the fishermen repair to their reels and "take on" the net, the cork line being laid on one side of the stern and the lead line on the other, the slack of the net, which is about twenty feet deep, being laid between the cork and lead lines. The oarsman then rows toward the opposite side of the river, while the netman stands up in the stern and throws out the "tople staff," as slick about the feet long, heavily leaded at the butt and surmounted on the top by some object readily seen by the boatman. The net is connected with the pole staff by ropes and is thrown out as the boat is rowed across the river. When the net is all out, another rope connects it with the boat, and the fishermen are ready for t

is about twenty feet deep and varies in length, is leaded at the bottom to sink it and corked at the top to float it, thus keeping it vertical in the water. The material of which it is constructed is fine linen twine about the size of carpet thread,

the bottom to sink it and corked at the top to float it, thus keeping it vertical in the water. The material of which it is constructed is fine linen twine about the size of carpet thread, the meshes vary in size from three and one-half to four and one-half inches, about four inches being most commonly used. The shad swimming up the river come in contact with the net, the head slips through a mesh and the shad is "gilled" or strung in the net. When the net is taken up they are taken out of the mesh and fall into the boat.

Shore nets or seines are worked on an entirely opposite plan and are of different material and make. The shore net has a fine mesh and is constructed of heavy twine; one end is secured on the shore and the other end is carried out into the river by men in a boat. A circuit is then made and the net returned to the shore. Both ends are now on dry land and the haul is commenced. The mesh being fine almost everything caught inside of it is landed. Many small shad are thus caught which should be given their liberty, but are usuall sold for a small price to shad peddlers.

The fish are usually sold by contract for the season at so much a hundred, varying from \$14 to \$18, or from fourteen to eighteen cents a piece. Sometimes the fisherman sell by the market price, getting good prices for the first fish and then dropping down to five or six cents a fish for them when the xeason is at its height. Unless some accident befalls then, at a shadman usually clears about \$150 for his season's work. But, in all probability, the marketmen who sell the shad reap a much richer harvest, for, with the wear and tear of fishing and the cost of ice to pack their shad, the fishermen meet with considerable to lessen their profits.

Sometimes, late in May, the fishermen anchor, or in other words, make one end of the net secure to shore and then wait in patience for their net to fill up. On these occasions it is most pleasant to pass a night with the shadmen. Imagine a beautiful monolight night, the dark water and indisi

STIRRING UP TROUT.

STIRRING UP TROUT.

I AVING been a trout fisher from the age of ten years, I thought I had nothing learn in that time, but a few years ago in Northern Michigan I was put up to a new device. A party of us, male and female, had gone from the island of Macinac in a sailboat across the straits to the main land, to a trout stream highly spoken of by our boatman. It was in the month of Angust, when the insect tribes are hungry and venomous. We landed and made our way through the thick woods a quarter of a mile to the stream, on which had once been a saw mill. The mill was ruined and the dam gone, and the stream looked troutful, The woods were full of raspberry bushes loaded with fruit. These the ladies of our party attacked, but were driven ignominiously to the boat by clouds of black files and mosquitoes, as numerous in that region as in Maine or Canada.

We others pushed on to the stream, cautiously, rod in hand, and tried the worm in various places, but without success. No trout responded to our invitations. After a while our boatman came up from the lake and said: "Let me try and see if I can't raise one." He took one of our rods and waded up and down the stream, disturbing the water andmaking it flow with a thick current of mud and sand. Then he began to fish, and soon had half a dozen quarter of a pound trout on shore.

By this time the news of the arrival of fresh blood had spread far and wide among the mosquitoes, and they hastened to the banquet in such numbers, that we all retreated to the shore and embarked without trying, to practice this new method of trout fishing—new at least to us, and opposed to all our theories of that sport. I had seen the bottom raked successfully in fishing for shiners and minnows, which are induced to feed in that way; perhaps, because it stirs up the small insects and worms from the bottom.

So these Michigan trout, being unacquainted with men and his wiles, may have imagined that the boots of our boatman roiling the water meant a beneficent shower, bringing them plenty of food

SHAD IN MOROCCO.

A CONNECTICUT gentleman, who knows every inch of the United States scaloard on the Atlantic, and takes no little interest in pisciculture, makes the following state-

on little interest in pisciculture, makes the following statement:

Sind fishing is carried on here by quite a number of the natives, and large quantities are caught in their nets. The first intimation I ever had of the existence of shad in Morocco was in May, 1877, when on a visit to the city of Fez in company with a government official. While quartered in a palace allotted to us by the sultan, a plate of fried fish was placed before us at breakfast, and on tasting it I at once discovered it was shad and spoke of it as such. The whole of the company present, however, disagreed with me. The following day, at my request, a most magnificent shad was placed before us uncooked. It was then decided that the fish was shad. Since that time I have visited all the ports on the seacoast of Morocco, from Tetuan to Mogador, and have seen the shad in all its varieties. There are on the coast of Morocco five rivers, in which there are from eight to twelve feet of water over the bars at high tide. They are the river at Tetuan, the Sabou River, at Larachi; the river that divides Sali and Rabat, and the Azamore River, twenty miles northeast of Mazagan. These rivers are frequented by shad every year. The fish enter in the month of December and remain in until about the 1st of May. I am under the impression that there is but one shad fishery on each river, but can speak positively of the river that empties its waters into the ocean between Rabat and the noted old pirate rendezvous, Sali. This fishery I have visited on three different occasions in three successive years.

The station is about eight miles up from the mouth of the river. It is a rather primitive concern, but, novel as it may appear, they catch large quantities of shad. At the fishing

The station is about eight miles up from the mouth of the river. It is a rather primitive concern, but, novel as it may appear, they catch large quantities of shad. At the fishing grounds the river is about seventy yards wide. A large rope made of the slender branches of willow is run across the river, hauled taut and belayed. A seine is then passed passed from shore to shore, suspended from the willow rope, and is left there during the fishing season. The fishermen tiren fish by tides. As the fish can pass no further up the river, they congregate at the seine. At every high and low water slack a small net is worked through the water. From

ten to twelve hundred shad are frequently caught in a day They are then placed in large, rough boats, taken down the Rabat and Sali, and sold for about twelve cents each. Many of them are split open on the back like our fishermen split mackerel, leaving the head on and backbone in. These are corned, loaded on camels, and sent to the cities in the interior, Fez. Maquinez, and the city of Morocco.

The size and quality of the shad in Morocco far exceed any that are caught in the United States, the Azamore River here, like the Connecticut River, producing the largest and best fish. When I first came here I purchased a camel-load from the Azamore River to salt down. They had been brought from a distance of forty miles, and cost me about fourteen cents each. There were sixty-four shad in the load, and among them I found some that weighted eleven pounds; not one of them weighed less than six pounds. Their flavor is excellent. I have been informed by people here that they have seen shad caught in the Azamore River that weighed fourteen pounds, and I believe it. The salting of the shad with the intention of keeping them over the year as we do is a failure. They are so extraordinarily fat that in a few months they begin to rust and have an uppleasant taste. No doubt the warm climate is one of the causes of this. The shad are never taken out of the country.

Casablanca, Morocco, January.

TENNESSEE FISH NOTES.

AM sorry to say that even now that we have laws for the protection of fish, that seining and vandalistic means of catching fish are openly carried on and no one to report the guilty ones. Pegram's mill dam was seined a few days ago, depopulating it of fish entirely. The Cumberland River and its tributaries are filled with nets and traps, though the offenders laugh at the authorities and their laws. If such influential citizens as Charles E. Hillman, Silas Many, Frank Furman, Frank Krider, Edgar Jones, Ed. Hicks, W. M. Duncan and others, would take the matter in hand they could stop it. These gentlemen should organize themselves into a game and fish protection association, and enlist the co-operation of dealers in such articles of food, and between them pass laws and rules that would put a stop to traffic in game and fish out of season, or taken other than in the legitimate manner. If the pot-fishermen and wholesale destroyers of these two delicious articles of food had no market for their goods, and be indicted and punished as well, they would give up their infamous doings. It would take a little time and some trouble to make this organization effective, but through correspondents in Memphis. Knoaville and Chattanoaga, the dealers and law-abiding citizens of the entire State could be enrolled in the good cause. Until such action is taken, and the people united in maintaining the law in a territory so large as Tennessee, it must become a deal letter.

Notwithstanding the above, fish in certain streams have AM sorry to say that even now that we have laws for the

Notwithstanding the above, fish in certain streams have

letter.

Notwithstanding the above, fish in certain streams have been very abundant this spring. Messrs. Hampton, Cheney, Jim Sweeny, and a party of gentlemen of Huntsville, Ala, returned a day or two ago from an excursion to Crow Creek, at a point near where it enters the Tennessee River; there they had grand sport, creeling a number of superb jackfish. Cheney landed one which tipped the beam at eleven and a half and Jim another at ten pounds. Fearing his word might be questioned, he brought his tale home to his good wife, so everyone believed the rest of their story.

Mr. Poole caught a vellow cat out of the river the other day with ordinary tackle which weighed sixty-one pounds. During the high water this spring a number of ponds which had been stocked with German carp were inundated, and now Brown's Creek is said to be swarming with the young of that breed, washed out, no doubt, by the current of course their tenure of life is short, as the bass and other voracious varieties will soon destroy them.

The mania for pond building and fishculture remains unabated among our farmers, but as only a very few of them go about it rightly, the results will be meagre. I have written article upon article upon the subject, giving the best authority I could find in your valuable paper and from others, though the prevailing idea that a hole with water in it is all that is necessary to successful fish-raising predominates. Some few of our farmers, however, have gone about the matter systematically and will be rewarded ere long with Splendid results.

Nashville, May 2, 1882.

Taking Black Bass Through the Ice.—Referring to

TARING BLACK BASS THROUGH THE ICE.—Referring to reports of "II.," Plymouth, N. H., in your issue of April 27. Some of our fishermen caught in the latter part of March, while fishing for pickerel through the ice in Big Pond, some six black bass, all large, one I saw and estimated it at four pounds. This is the first instance that I know of where they were caught through the ice. They were introduced about nine years ago.—C. Gerber, (Webster, Mass.)

RAINDOW TROUT FOR MEACHAM LAKE.—On the first of this month Messrs. James Geddes, Reuben Wood, and a party left Syracuse for Meacham Lake, Franklin county, N. Y., with 20,000 eggs of rainbow trout to be hatched on account of the New York Fish Commission by Mr. A. R. Fuller. They will remain and have some trout fishing. When we heard of it our soul broke forth in the old song: "Would I were with thee, every day and hour."

BIENNIAL SPAWNING OF SALMON,—Chicago, III.—Your issue of April 27 contained a letter signed "Samuel Webber," in which he speaks of the "biennial theory" regarding salmon as if it required corroboration, which I thought it did not. In Scotland it is a universally accepted fact that after spawning the salmon drop back into the big pools and theres spend the rest of the winter until the spring floods come and carry them down to the sea. Although the salmon are usually "blotched" and discolored during spawning time, they almost always regain their silvery color before spring. They are popularly called "kelts" at that season, and when they are jumping, unless you get a close view and see that this time with "maggots" in their gills. The end of April usually sees all the "kelts" cleared out of the river, but I have hooked them on small trout flies well into the month of May. On one occassion a "kelt" which had been taken in April and returned to the stream with the addition of a brass ring in his tail to identify him, was captured in the same stream in October, a fine, clean fish, fresh from the sea.—R. J. W.

SHAD FRY.—The United States Fish Commission will distribute 50,000,000 of shad fry this month.

Hishculture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNHAL MEETING

(Continued).

(Continued).

THE PRESIDENT—The paper just read by Mr. Smiley is a most valuable one and exhibits the power of statistics. Such information, covering such a wide extent of territory in so thorough a manner, could not well be gathered by private enterprise, nor by the Fish Commission of any State. The United States Fishery Commission is doing a grand work if it never does anything else than gather reliable statistics of our fisheries, and when this field is well worked, as is now being done, we will have what we never had before, a correct knowledge of our fishery resources.

The Skengerany then read the following:

THE SECRETARY then read the following:

HATCHING STRIPED BASS, STURGEON AND TROUT.

BY SETH GREEN.

HATCHING STRIPED BASS, STURGEON AND TROUT.

BY SETH GREEN.

Mr. President and Gentlemen of the American Fishcultural Association—There have been but a few sturgeon and striped bass hatched artificially. The reason that there have not been more is that it is so difficult to get the mature fish when the spawn is ripe. In many of our waters there is no great difficulty experienced in getting both sturgeon and striped bass that are quite far advanced or well along toward the time when they are ready to cast their spawn, and if a suitable place could be prepared where the fish could be placed and kept securely for a few days until the ova had reached the proper stage of development, there could be millions of them hatched artificially without a doubt.

The New York State Fish Commission has stationed men at different points on the Hudson River where the most sturgeon were eaught, principally at Hyder Park, New Hamburgh, Tivoli and Catskill during three sensons, and has succeeded in hatching one hundred and fifty-five thousand young fry. The mature fish are so scarce that it was with great difficulty that a ripe male and female could be obtained at the same time, although every exertion was made to obtain them, and every fish was inspected as it was brought in by the fishermen as long as the season lasted, which is during the months of May and June. If a pond or enclosure could be so constructed that cels could not gain access to it, it would be a long step toward the propagation of sturgeon. Els are the great drawback to keeping sturgeon in pens for propagating purposes, for the reason that when the female is ripe, or ready to cast her spawn, the vent enlarges or loosens to such an extent that cels are enabled to enter therein and live upon the ova until it has all been destroyed. I have seen this frequently when I have had them in fish cars.

It would be very difficult to find a place on the Hudson or any other rivor that flows into the ocean, where a pond could be built and not be infested with eels, but I believe

such course. I offer this as a suggestion, and perhaps it may put somebody on the right track to work it out and make a great success.

There is no question about its being very necessary to propagate sturgeon artificially. There is no other way to keep up the supply, and unless it is done sturgeon must soon become a luxury of the past.

I have never seen or known of an eel entering a striped bass, but I should think some precaution would be necessary in case very large females were kept in confinement, either in careful construction of pen, or protecting the vent as suggested above, in case it was found necessary. The striped bass are caught construction of pen, or protecting the vent as suggested above, in case it was found necessary. The striped bass are caught at Weldon, N. C., on the Roanoke, and in some other of our Southern rivers in large quantities. In some localities large numbers are caught on what are called by the fishermen racks or slides. Those are built of wood on the inclined plan principle, the top being covered with slats raised a short distance apart, allowing the water to sift through. They are set in the most rapid part of the river, and leaders branch out from both sides near the water's edge, which guide the fish to the rack or slide. Thousands of striped bass are caught in this way. I am of the opinion that if experienced men were placed on these racks during the month of May, when the fish were running, and select the females which were nearly ripe, and place them in a care properly constructed, that a great success could be made in hatching them. There is no trouble in securing ripe males when the fish are running, but as a precaution it would be well to pen a few fin case of an emergency. I have hatched both sturgeon and striped bass successfully in my shad hatching box. If sturgeon or striped bass were to be kept in confinement for propagating purposes, at least two cars should be constructed, so that the fish could be overhauled daily, or as often as was thought necessary, and work

constructed, so that the issi could be overhadized duly, or so ften as was thought necessary, and worked over from one car into the other. This would aid greatly in the prosecution of the work.

The New York Fish Commission has this season offered for distribution to any parties in the United States or Canada, applying before March 1, and sending fifty cents to defray cost of packing, a package of 300 to 500 eggs of the California mountain trout for experiment. In response to the notice we have received 248 applications from the following States, Territories, and provinces: Massachusetts, Pennsylvania, Conecticut, New Jersey, Rhode Island, Missouri, Indiana, Michigan, Minnesota, Vermont, New York, Iowa, Illinois, Ohio, Georgia, Virginia, Kentucky, Dakota, Wisconsin, Kansas, Texas, New Mexico, Mississippi, Louisiana, New Hampshire, Maine, Nebraska, North Carolina, Ontario, California, Quebec, Oregon, Nova Scotia, Utah, Wyoming, and Newfoundland. Each one of the applicants will be given as large a supply as that with which the New York Fish Commission started, and from which we have succeeded in hatching 1,340,000 young fry. If one-half of the 248 applicants should succeed in raising and propagating this species, so that each one should succeed in hatching 1,000,000 during the next six years, we would have 124,000,000 more of this excellent game and food fish in existence than would otherwise have been the case. I am very anxious to see this fish in every lake and stream in the country suitable for them, and hope that the success of this wide distribution may be as great, if not greater, than I have mentioned above. I have also taken pains to put each applicant in the way of procuring practical information in the way to hatch and rear the fish successfully. The Prespenter — Mr. Green has been called "the father of fahies" but I notice here among us a gentleman who is a friend of him who may be called the "grandfather of fishes." I refer to the venerable Doctor Garlick, the father of American fishculture and would

MR. PEASE—Dr. Garlick's health, as most of you know, has not been good for many years. He is now in his seventy-sixth year and is a great sufferer, but his spirit is unbroken. He takes great interest in fishculture yot and reads all your reports and the FOREST AND STREAM with great interests. I do not know that I can say more on this subject than to say that the Doctor is with you in spirit, although not able to be here in person.

person.

MR. PHILLIPS—We expected a paper from Mr. S. M. John-

son, of the firm of Johnson & Young, Warren Bridge, Boston, on the lobster question. Mr. Johnson has given us much valuable information at previous meetings and is one of the best informed men on the lobster question in the country. In place of a paper he has written a letter to Mr. Blackford which I will take the liberty or reading, although evidently not intended to be read before the association. My apology for doing this is the information contained, which we cannot afford to miss. He says:

BOSTON, Abril 1, 1882.

BOSTON, April 1, 1882.

afford to miss. He says:

Boston, April 1, 1882.

Mr. Blackford:

DEAR Sin—This everlasting lobster question appears so inevitably that I thought I would write just one word to you unstead of attempting to bore the Association, and in a word say what I think about the matter now, as well as in the past. If my memory serves me I made the statement before the Association at the first meeting which I attended, that we were doing more injury than we realized, and I think so still, and that each recurring year confirms and intensifies the truth of that assertion, and the seeming necessity for evading a wise law to keep up even a partial supply proves the wisdom of that law, and that we are making sacrifices of future good to gratify present demands. In using these small lobsters we are hypothecating our stock in trade and cutting off our future supply. The price that has been paid this year for those small lobsters shows to what straits we are already reduced, and using small ones this year to keep the price down only adds greatly to what the price will be next year, and so on. This of course is apparent to you, and I should not say anything about it except for the reason that I wish to keep the matter alive and try to avert an evil so sure to come unless we can manage to have our law enforced. If lobsters have been worth, or rather if they would bring, twelve cents a pound this year in New York, it is because we have destroyed so much of our supply, and I using small ones is a sure way to increase the price year by year. We are constantly in receipt letters saying we cannot ship to you because we can sell everything in New York regardless of size, which, if true, is wrong. Not because it affects me personally, but because it affects the whole business, and brings about a state of things which good men and the combined wisdom of such associations as the American Fishcultural Association are striving to prevent.

I wish to put myself on record as advocating a just and wise law for the preservation of lobsters. I do n Blackford

MR. BLACKFORD—Mr. Johnson is greatly interested in the ten-and-a-half-inch lobster law, as the only way to preserve the lobster fisheries. Last year lobsters sold as high as twen-ty-five cents per pound at retail, and even higher. Small lobsters are sent here for sale, notwithstanding the law against it, and many go to New Jersey, where there is no law on the subject.

CARP NEAR PITTSBURG.—Mr. George Finley has been personally known to us for the past eight years, and during that time he has been much interested in fishculture. He was formerly engaged in the breeding of goldlish, but has lately turned his attention to carp. The Pittsburg Fost says: "The breeding of German carp is becoming an industry of no small importance in this country. It has extended to Pittsburg, and it is not generally known that the culture of this fish is carried on quite extensively in the East End. Mr. George Finley, a well-known resident of that section of the city, has on his premises off Frankstown avenue a system of thirteen propagation ponds, including Silver Lake. Yesterday afternoon a representative of the Fost visited the gentleman's place to ascertain some facts which might be of interest concerning carp-breeding. Mr. Finley said that in October, 1879, he procured from the U. S. Fish Commissioners twenty-five German or European carp. They were about as broad as a man's thumb, and some much smaller, and but a few inches long. He put them in two small lakes of different exposures and different temperatures of water in summer. When the water in one of these ponds was drawn off the next full the fish were found to measure sixteen and a half inches in length, and in the following fall of 1831 hey were about as broad as a mon's thought of the property of the control of the culture of golden carp, those twenty-five fish have multiplied so rapidly that other ponds were required to hold them, and they can now be counted in schools of thousands. Mr. Finley has had twenty-eight years' experience in the culture of golden carp, better known as goldsh, and having carefully studied their habits during that long period, he found that the characteristics of golden-fish and the German carp were entirely similar. Hence his knowledge gained of goldfish has been of great service in the successful culture of the true carp of later years. Although a bottom fish, and preferring to eat off the bottom, his take the CARP NEAR PITTSBURG.-Mr. George Finley has been

CARP FOR SALE.—Most applicants for earp want those which will spawn immediately. This is natural, but it is no more possible to obtain such fish from the national earp ponds than to get fruit-trees which will bear this summer from your nurseryman. We have frequent inquiries asking where carp can be bought, and we have replied, "Nowhere." It seems, however, that Mr. Geo. Finley, whose advertisement will be found in another place, has carp for sale. This hint is enough. He has advertised in the right paper to get a run on those carp that will make him cry, "Enough." Let no man who wants adult carp stand on the order of writing, for he won't have a fish left to spawn for himself in a few days after this is published.

COL. G. F. AKERS LEAVES TENNESSEE.—I regret to announce that on last Wednesday, our able and energetic Fish Commissioner, Col. Geo. F. Akers, left Nashville and the State of Tennessee to make Louisville his future home. The Colonel came to Nashville in 1855 from Lynchburg, Virginia. He at once embarked in commercial pursuits, and by close application to his business, aided by an unexceptionally firmind, he was not long in being recognized as one of the shrewdest and boldest merchants in the city. He commanded the confidence and respect of the community, and in a comyaratively shortwhilebuilt up a trade which netted him a handsome fortune. Every new effort or undertaking was crowned with success, and had his big heart been under the same control as his business, and more selfishness belonged to his composition, to-day he would have ranked among the merchant princes of the land. But this insurmountable obstacle led him to indorse for others, which with other complications forced him to give up his business, not because of pecuniary troubles, however, as he owes no one a nickel, and has enough laid by to keep him in affluence the remainder of his days, but envy, passion, and hatred on the part of his persecutors caused them to constantly harass him, until to do business here is no longer feasible, so he goes forth with a character for honesty and business ability to accept a position of high trust in another State, on a salary, so as to sever his ties with a people he loves, and seek peace and quiet elsewhere. Withal the annoyances and vexations through which he has passed, and the COL, G. F. AKERS LEAVES TENNESSEE.

natural sadness of quitting the home of his adoption and the friends of a quarter century's duration, he says he will never desort his fondness for sport, and will yet wet his line many times while following the good old "lzak," to whom he swore allegiance many years ago, when first enrolled under his banner, as a child. That the State has lost the best commissioner it ever had, even the Colone's enemies will admit, for had it not been through him, no one elsa would have framed and had passed our fish protection laws, introduced the earp, or raised the standard of angling to its true consideration, from the old modes of fishing simply for food without regard to sport. Kentuckians will greet him with open arms and make him feel the change as little as possible.—J. D. H.

DISTEMPER.

WE have received during the past week several letters from different sections of the country requesting advice for the treatment of distemper. Below will be found an exhaustive treatise upon the subject, for which we are indebted to the "Illustrated Book of the Dog," by Vero Shaw:

nor the reatment of distemper. Below will be found an exhaustive treatise upon the subject, for which we are indebted to the "Illustrated Book of the Dog," by Vero Shaw:

Treatment of Dog," by Vero Shaw:

This consists firstly in doing all in our power to guide the specific catarrhal fever to a safe termination; and secondly, in watching for and combating complication; and secondly, in watching for and combating complication.

The older practitioners used to trust largely to the lancet, to strong purgatives, and to emetics. Knowing, as we now do, the true pathology of the disorder, we are not likely to follow their example. We have seen that distemper is really the effects of a specific poison, alloat in the circulation and generating more poison, which Nature does her best to climinate; and we have seen, too, that the naso-pharyngeal mucous membrane is the soil chosen by the poison-seed of distemper whereon to grow and flourish. As, then, the symptoms of catarrh are caused, not by irritation from without, but by irritation from within—by a poisonous vis-a-levya, it is evident that our efforts must be directed to support Nature, and assist her to eliminate the poison.

What lesson are we going to learn from the fact that sheep-curs and hardy street dogs get over the distemper with so little trouble, while high-bred animals and indoor pets only too-often fall victims to the disorder? Surcly it is this: that in the former cases Nature has more power to do battle with the poison. And the following is our own experience, and probably the experience of most practitioners: Whenever we get a case of distemper in a hardy constitutioned dog—probably one of no particular breed—we find we can almost hivariably bring the dog through it with little or no medicine, by simple nursing and supporting the animal's strength.

It is, in our opinion, a great mistake to begin the treatment by giving a strong emetic. Emetics are very seldom, if ever, needed. If we think that the dog has need to evacuate the contents of his stomach—wh

ereised.

Food and drink in distemper.

Our object is to support the system without deranging the stomach, therefore, for the first three or four days let the food be light and easily digested. In order to induce the animal to take it, it should be as pealable as possible. For small dogs, milk or cream, eggs, arrow-root, rice, and beefter may be given. For larger dogs you cannot have anything better than oatmeal porridge nade with milk instead of water. At all events, the dog must if possible, be 'induced to eat; he must not be "horned" unless there be great emaciation; he must not over-eat, but what he gets must be good. If the appetite is quite gone, and he turns up his nose at everything, beef-tea, eggs, milk and sherry in small quantities must be frequently administered by the spoon.

When the dog comes to be very low indeed, brandy must be substituted for the sherry. It must be diluted with water, and the quantity to be given will depend not only on the size of the dog, but upon the benefits that seem he accrue from it. As to drinks, dogs usually prefer clean cold water, and we cannot do harm by mixing therewith a little plain nitre.

MEDICINE IN DISTEMPER.

R Sp. æther ... m xxx ad 3 iij.
Vio, antimonial ... m iij, ad m 40,
Muellag, tragacanth ... 3 ij, ad 3 j
Give this thrice daily.

If the cough be very troublesome, and the fever does not run very high, the following may be substituted for this on the second or third day:

 B Syr. seille.
 m x, ad m 5 j.

 Tinet. hyoseyam
 m x, ad m 40.

 Sp. rether. nitros
 m x, ad 3 j.

 Aq. camph
 q. s.

administered will do much good, and doses of dilute prussic acid, from one to four drops in a little water, will generally arrest the vomiting.

If constipation be present we must use no rough remedies to get rid of it. A little raw meat cut into small pieces—mineed, in fact—or a small portion of raw liver may be given if there be little fever; if there be fever, we are to trust for a time to injections of plain soap-and-water. Diarrhea, although often a troublesome symptom, is, it must be remembered, generally a salutary one. Unless, therefore, it becomes bered, generally a salutary one. Unless, therefore, it becomes excessive, do not interfere; if it does, give the simple chalk mixture three times a day, but no longer than is needful. It is better that our whole plan of treatment should be gentle and simple, and only harm can accrue from hastily rushing from one remedy to another. Injury to the dog is sure to result from such a course.

On the other hand, specifics had better be avoided.

The discharge from the mouth and nose is to be wiped away with a soft rag, or, better still, some tow, which is afterwards to be buried. The forehead, eyes, and nose, may be fomented two or three times a day with moderately hot water with great advantage.

It is not judicious to wet long-haired dogs much, but shorthaired may have the chest and throat well fomented several times a day, and well rubbed dry afterwards. Heat applied to the chests of long-haired dogs by means of a flat iron will also effect good.

Williams recommends hydrate of chloral at night. Hydrate

also effect good. Williams recon

also effect good.

Williams recommends hydrate of chloral at night. Hydrate of chloral, in our opinion, ought to be expunged from the Pharmacopaia. Sometimes it may do good, but oftener evil, because brain symptoms are apt to follow its use, and also great nervous prostration.

THE COMPLICATIONS OF DISTEMPER.

THE COMPLICATIONS OF DISTEMPER.

See under their proper headings. Some authorities make different kinds of distemper, such as head or brain distemper, nervous distemper, belly distemper, etc., etc. This classification, however, is calculated to make the general reader lose sight of the real symptoms and causes of the malady. There is only one form of distemper, and the lesions of other organs are its complications.

Supposing no very severe complication to have arisen, you may begin, as soon as the fever abates and there is some show of depression; to give tonics. The following is an excellent one:

\mathbf{R}	Quinæ gr. Pulv. rhei gr.	1/4	ad	gr. ilj.	
	Pulv. rheigr. Ext. taraxgr.	ij.	ad	gr. x.	
Ft.	bolus	-	uu	S+. A.	٠,

If there be much heat on the top of the head and brow, we usually substitute this—

B Bebeerin sulph.....gr. j. ad gr. v.

Rosæ conf......q. s.

Ft. bolus.

During convalescence good food, cod-liver oil, moderate vercise, fresh air, and protection from cold. These, with an ocasional mild dose of castor-oil or rhubarb, are to be our lect-anchors.

Sheet-anchors.

Paralysis is sometimes present in, or comes on in, the latter stages of distemper, and must be looked upon as a very bad ominous sign, indicating, as it does, effusion about the spinal cord, or congestion of the same.

Paralysis of the tongue is likewise not uncommon, the tongue folling out to one side, and giving a very unsightly appearance indeed.

TREATMENT

TREATMENT.

In the paralysis of distemper, begin the treatment by giving a mild purgative. Castor oil and buckthorn will in this case do as well as any other, three parts oil, two parts buckthorn syrup, and one part poppy syrup. See that the medicine has acted, if not it must be repeated, but do not forget that the dog is weak. Keep his strength well up, and begin the administration of iodide of potassium and belladonna, as in this prescription—

If Potass iod.gr. j. ad gr. v.

Extr. belladonn.gr. i-16 ad gr. 1.

Extr. gentian.gr. ii, ad gr. x.

Ft. bolus.

Ter. die.

Extr. belladonn gr. ij. ad gr. x.

Ft. bolus. Ter. die.

Continue this treatment for a week; if little improvement, the dose is to be slightly increased, and cod-liver oil given. Sometimes nux vomica may be used, but it is of doubtful efficacy in this form of paralysis.

Local applications are of no use, for the simple reason that the muscles are not the seat of disorder. It is their misfortune, not their fault. However, gentle friction or shampooring with the warm hand will go far to maintain the nutrition of the limbs, and prevent ataxy or wasting.

We must not forget to mention that a sort of convulsive palsy is sometimes brought on by the incautious use of mercury. Here the treatment is the warm bath, good diet, and small doses of iodide of potassium.

Only in old-standing cases do we use nux vomica, and we do not care to continue it use longer than three weeks without intermission. Give from ½ to 2 grains of the extract in a pill, continuing its use with good food and other tonics. We have seen paralysis produced by even a small dose of nux vomica given in case of constipation. The animal had a strange susceptibility to this drug on a previous occasion while under the treatment of a London vet., being attacked in the same way from the same cause. The paralysis in both instances was cured by an emetic.

Remember that in all cases of paralysis the urine must be attended to, and if the bladder is paralyzed the elastic caliteter must be used.

Rest, good feed, beef tea, eggs, and sherry in bad cases, and an occasional aperion if needed; and let the dog's bed be comfortable and dry; that is, kept dry, as he may wet it.

For reflex paralysis,—If from constipation, a few doses of the castor oil and buckthorn mixture, as prescribed by Younatt, will generally remove it. If it is not retained, give about half an hour before the next dose from 1 to 3 drops of dilute hydrocyanic acid, rubbed up with 5 to 15 grains of the trisnitizate of bismuth. See that the teeth are not loose or decayed, if they are they must be ext

nd exercise.

CHOREA.

Chorea, or St. Vitus's dance as it is more frequently called,

is a very common sequence to distemper, especially if that disease has been badly treated.

PATHOLOGY.

The profession are not agreed as to what is the real cause of this extraordinary disease. Post-mortem examinations have sometimes revealed alterations in the brain or spinal cord, but just as often they have revealed nothing unusual. Some pathologists consider it a blood disease; it may be so, but we prefer including it among the diseases of the nervous system. SYMPTOMS,

SYMPTOMS.

Either the whole or only a part of the body if affected, as the neck or one leg, or both, or one side of the body alone. It is merely a form of irregular palsy, and probably it depends greatly upon a lowered condition of the vital force, with impoverished blood. The movements of the limbs consist in a sort of twitching or shaking notion, easily increased by acting on the dog's mind, either through feur or kindness. There may be, and very often are, spasmodic twitchings of one side of the face, or the whole head may shake up and down. Sometimes, long after distemper is past and done with, and the dog well and strong, and able to do a day's work, twitchings to a slight degree will continue.

TREATMENT.

TREATMENT.

If our view of the pathology of the disease be right, the treatment must naturally resolve itself into trying in every way to improve the general health. We must give nutritious diet and uilk. We must give the dog as much out-door exercise, walking, running, or romping; as he can take. And we may try the bucket bath every morning, only gently at first lest we give too great a shock.

Nux vounce may also be tried; it sometimes does good. Sulphate of iron and arsenic often does good, especially if combined with cod-liver oil, in chronic cases, be it remembered, and not for some time after distemper. The nitrate of silver pill (one-sixteenth to a half grain made inta a pill with bread crumb and administered thrice a day) we have occasionally found serviceable. The bowels must be carefully attended to, but purge as seldom as possible. The treatment of this disease is, on the whole, far from satisfactory.

PERTINENT REMARKS ABOUT DOGS.

Do you not think that undue prominence is nowadays given to the blood of dogs! That proper attention to the propagation of anything, whether animal or vegetable, often results in improvement no observing man can deny. The peach, the pear, and various vegetables attest that. We are told that the peach, as cultivated at the present day, which is one of the most agreeable and healthful of fruits, is a very different thing from the native specimens which were told that the peach, as cultivated at the present day, which is one of the most agreeable and healthful of fruits, is a very different thing from the native specimens which were touth the peach of the peach of the peach of the peach of the peach as a such interests of the peach of the peach of the peach and under the peach at the seckel, Bartlett, Duchesse d'Angouleme and many others are infinitely superior to the styptic pear from which they all spring, found in various parts of Europe. And such is the case also with strawberries, raspberries, grappes and, indeed, all varieties of fruit, so far as my knowledge extends. But the efforts in this direction are often carried to the extent of so enervating the physical vigor of the plant, that the purpose of reduction and cultivation is defeated. May it not be so reduction and cultivation is defeated. May it not be so reduction and cultivation is defeated. May it not be so for reduction and cultivation is defeated. May it not be so for the plant if the peach of the plant is not provided in the destruction of the most essential particular—constitution. Did we not have some remarkably fine dogs before R. LI. Purcell-Liewellin was over heard of? Were they not quite as good as Laveracks, blue belous and all the other "double than the state of the plant is the peach of the plant is a plant in the destruction of the most essential particular—constitution. Did we not have some remarkably fine dogs before R. LI. Purcell-Liewellin was over heard of? Were they not quite as good as Laveracks, blue belous and all the other "do

Near a little town in that State, there lived a sporting individual named Barnabas Pilitston, who above all things, prided himself upon his knowledge of cannology. His faculties in that line were so well known and conceded that his opinion in regard to the points of dogs was often sought by persons who either had an animal that they wished to keep or knew of one they wished to buy. One cool, crisp October morning Barnabas had been on a successful fox hunt, and thinking so fortunate a man was entitled to a drink, he went into the town and "quenched his raging thirst" at the expense of a half-dime. After doing so, he went out to bask in the genial sunshine until he should again get "dry." Surrounded by his boon companions, he was narrating the incidents of the morning's chase, and told, with prolix particularity, of the peculiar movements of each dog in the pack. Whilst thus engaged, a tow-headed boy approached, leading a small yellow dog by a cotton string, and, without ceremony, said:

"Uncle Barnabas, daddy sent me here, with this here dog, to git your jedgment upon him"

"Wait a while, my son; I'm talking to these here gentlemen, and when I gets done a talking to these here gentlemen, and when I gets done a talking to these here gentlemen, and when I gets done a talking to them, I'll look at your dog," And then he resumed the thread, or rather tied the thread of his discourse, which the urchin had broken, and spun away for some time, whilst the offending but innocent boy stood respectfully, enjoying the lum of wisdom which came from his exhaustless lingual spindle. After his theme was ended, he turned to the boy and said:

"And your daddy sent you here with that thar dog to git my jedgment pon him, did he?"

"Yes, sir."
"And has yer daddy spent his 'pinion upon that thar dog,

'Yes, sir." 'And has yer daddy spent his pinion upon that thar dog,

"Yes, sir."

"And has yer daddy spent his 'pinion upon that thar dog, my son?"

"Yes, sir."

"Well, what was his jedgment?"

"Well, what was his jedgment?"

"He says he thinks that maybe he mought git to be a tol'bul good dog arter a while."

"Well, now gentlemen, I'm a gwine look at that boy's dog than, and I jest want you to obsarve me, gentlemen, for you'll larn something. Now watch, gentleesa, for I tell you that what I don't know 'bout dogs ain't worth knowing, and there ain't nary man in Kaintick that knows half as much bout dogs as I do. That's a sartin fack, gentlemen. My son, jest ketch hold of that thar dog and lif him up offen the ground, Gentlemen, you'll never known nothing 'bout dogs as long as their feet is a techni' the yeth. A leetle higher, my son, his hind foot's a scrapin'. That'll do; let him down. Now, gentlemen, jest look at that thar dog. His jewclaws comes out a leetle too near the ground, and he's as cat-hammed as thunder. His eyes is sot a leetle too close together, his ears is sot a leetle too for back, and his nose it's too short or tech into the yeth a'ter varmints. He's too narrer in the chist, he's too weak in the lines, and he's too short in the bar!! And jest look at that thar tail o' his'n. It swings over his back like the broken rim of a wheel, and the tip eend of his nose sticks out just like the blossom eend of a tomatter. The fact of the business is that thar dog thar is jest naterally no 'count no how. Now, my son, tell your dad that that's my jedgment."

Who will doubt the thorough qualifications of this adept, to speak an ee cathedra opinion upon this subject? But I trust that those gentlemen who are charged with the delicate duty of determining upon the characteristics of the blooded dogs who are exhibited at the shows, far surpass the cruditic Kentuckian in all things except his self-exaltation. Let them and dog breeders unite in the effort to improve the valuable qualities of dogs. Appearance is well enough in its place, but a sportsman ought to want a dog which can

"The flower of all his race, So true, so brave, a lamb at home, A lion in the chase.

'Twas only at Llewellyn's board The faithful Gelert fed,
He watched, he served, he cheered his lord,
And sentincled his bed,"

Now this was not the Llewellin, I take it, who has identified his name with a certain or uncertain breed of dogs. Perhaps he was his uncle or some faraway kinsman. But if R. Li. Purcell L. can even with his best, not his "culls," equal him the poem, then they are worthy of all commendation.

THE CLEVELAND BENCH SHOW.

THE CLEVELAND BENCH SHOW.

The premium list of the Cleveland Bench Show to be held June 6, 7, 8 and 9, indicates that every effort has been made to secure a large representation of dogs, and hence a full attendance of owners. There are 163 regular classes besides the specials, of which there will probably be a large number. Several of the express companies have agreed to return free of charge dogs that have been shipped over their lines to the show. The arrangements under the charge of Mr. Lincoln will no doubt be all that could be desired. There are classes for champion English setter dogs and bitches (\$30 each), and for English setter dogs and bitches (\$30 each), and for English setter dogs and bitches other than pure Laveracks (\$20 and 80), and for Englishs esterer gas and bitches of pure Laverack pedigree. The prizes for the setters and pointers are \$30 for first and \$10 for second, and for the puppies \$7 and \$81 for the spaniels \$10 and \$5, and for the spaniel puppies \$7 and 881 for the spaniels \$10 and \$5, and for classes with \$10 and medals in the open classes. The whole prize list foots up about \$1,300 cash, besides the medals. The officers of the Association are: President, L. G. Hamer; Vice President, J. T. Warnelint; Treasurer, A. E. Sterling; Secretary, C. M. Munhall. Application for premium lists, entry blanks or information, should be made to the last-named gentleman, Euclid Avenue Opera House, Cleveland, Ohio.

ANENT McGRATH.—Chicago, April 2. —Editor Forest and Stream: Please correct your list of awards—"Class 21—3d, L. C. F. Lotz, Chicago, Doubleshot." I had no dogs at the show, and there was no third prize. Doubleshot would have taken first, as he is the grandest dog in America. Please explain: How can "Master McGrath be the sire of Dawson's Spring, Class 20, 5 years old, when Master McGrath died in 1871? This is an outrage of the worst kind.—L. C. F. Lotz. [The error in giving Doubleshot a place was a palpable mistake. The conundrum that Mr. Lotz propounds is entirely insolvable, but we fail to see where the outrage comes in, as McGrath is still living, or was a few months ago, and is undoubtedly the sire of Spring. We should perhaps state that McGrath is not the celebrated Master McGrath, only a nephew of his. In view of this fact, our esteemed correspondent will doubtless agree with us that all men are human and liable to err.]

THE RICHMOND "WHIG" says of "Training vs. Breaking:" "The system here inculcated is a humane one, approved by experience as an effective mode to develop the full capacity of any dog of good breed."

THE BOSTON BENCH SHOW.

[SPECIAL DISPATCH TO THE FOREST AND STREAM.]

BOSTON, May 9, 1882.

The third bench show held under the auspices of the Massachusetts Kennel Club was opened at Music Hall this morning. For many days the show has been the one topic of conversation in many circles; and the attendance to-day proves that there is wide public interest in the exhibition. The show has opened with every promise of being a rost successful affair. The chrise number over three hundred. While Boston and its suburbs are well represented, still the entry list shows that the show is by no means a local one. Many fine animals are present.

present.

There is quite a gathering of prominent sportsmen here, and Music Hall has been filled to-day with a vast throng of interested visitors, ladies and gentlemen.

The judging was begun this morning, and progressed very fairly through the day. The exhibitors appear to be generally satisfied with the decisions.

The following awards have been made:

Champion Positional.

satisfied with the decisions. The combitors appear to be generally satisfied with the decisions. The following awards have been made:

Champion English setter dors.—Ist, W. Tallman's Foreman. 2d, A. H. Moore's Darkie. 3d, E. E. Hardy's Roll.

Al H. Moore's Darkie. 3d, E. E. Hardy's Roll.

Rifle and Tray Shooting.

SHORT AND MID-RANGE TARGETS.

SHORT AND MID-RANGE TARGETS.

The great excellence of short and mid-range rifles, manufactured at the present time, together with the improvements in their accuracy, which each year will add, makes it necessary that a target be adopted at an early date which will admit of definite comparisons and acceptance of the comparison of the co

and not as synetrical as were the rings are related in the first state of rilemen, and inviting their discussion of the subject. I autumit the following tables of ing their discussion of the subject. I autumit the following tables of measurements, and ask that rifference steemed their views. It will be noticed that the rings increase in an order easily remembered, and that the area of each ring bears a progressive value quite regular.

10 9 8 7 6 5 4 4 8 2 2 1	Radius inches. 184 234 4 514 714 1114 1114 1634	Diam. inches. 31/2 8 11 141/4 181/2 23 28 231/4	Incr. 0 2 21/6 3 31/6 4 41/6 55/6	Circumf. inches. 1/10.99 17.27 25.13 34.55 58.12 72.25 87.96 105.24	Area in inches. 9.62 14.18 26.50 44.76 70.00 103.67 146.83 200.27 265.66	Incr. 0 4.51 12.37 18.26 25.33 33.58 43.16 53.44 65.89
ĩ	1934	391/2	6	105.24 124.09	265.66 344.00	65.89 78.34

Taking 34 inches as the diameter of central ring, value 10, the next is increased two inches in diameter, value 9; the next increased two and a half; the next three inches, and the next three and a balf, and so on to thirty-nine and a half inches, the diameter of outside ring and value and id value—one: New Orleans, La.

NEW YORK STATE MILITARY PRACTICE.

NEW YORK STATE MILITARY PRACTICE.

THE Adjutant-General has issued a general order fixing the militia practice for the year. The men are divited into classes:

Third class consists of all who do not appear on a rame for practice. All present for practice are at first in the second class without reference to qualifications in previous years. Those who score 23 at 100 yds. standing and 300yds, kneeling (230yds, with carbines), enter the instructure and shoot at 200yds. standing and 500yds, lying down (300 yds. kneeling with carbines). A score of 40 and upwards constitutes the continued to the end by a preceded distance. This practice will be continued to the end by the continued to the end by th

after the course of firing in ranks. Firing in ranks at 100yds, will then be taken up in the following order:

Volley Firing, Five Rounds.—Fire by squad [or company], two rounds; fire by squad [or company], front rank kneeling, one round; fire by squad [or company], front rank kneeling, one round; fire by squad [or company], rar rank as front ("fours right about, about face"), kneeling, one round.

File Firing, Five Rounds.—First fire, two rounds. [A pause for criticism and instruction.] Second fire, three rounds, as rapid as consistent with accuracy.

Any who may have qualified at 290 and 500yds, but not at 100 and 500, may make their secres vaild by practicing through the second class, without shooting in the first again.

First general practice in all organizations must be completed before Aug. 1.

When an entire command has had opportunity for first general

579, may make their scores vaild by practicing through the second class, without shooting in the first again.

Pirst general practice in all organizations must be completed before Aller and an entire command has had opportunity for first general practice the commandant may, in his discretion, with the approval of the division communder, fix a subsequent day or days for voluntary general practice, without additional expense to the State. Those present will practice in the classes to which they respectively belong. In other respects the tour of duty will be identical with that prescribed for first reneral practice day, including fring in ranks.

Scores made (in any class) at a regular rife association match, secres made (in any class) at a regular rife association match, approved by the general inspector of rife practice, will be recognized as official. Such practice, however, must be without expense to the State. Wooden targets for volley and file firing should, without expense to the State, be erected on each range. A simple fence aparted with the necessary stripes, and backet by a suitable mound for safety, will suffice. The iron targets should not be used for firing in ranks.

In regular class practice is will not be permitted to through the regular classes, and are probibiled from shooting for a second or a higher score in a class in which they have already qualified. The record must stand upon the first qualifying score made.

In regular class practice is will not be permitted to fire more than five consecutive shots at any one distance on the same day, except the necessary skinting shots.

The secison for practice when the proposed to the same day, except the necessary skinting shots.

The secison for practice is will not be permitted to fire more than five consecutive shots at any one distance on the same day, except the necessary skinting shots.

The secison for practice is will not be permitted to fire more than five consecutive shots at any one distance on the same day, except the necessary skinting sh

CREEDMOOR.

CREEDMOOR.

THE season at Creedmoor was opened May 3 with a competition at 200yds, known as the "off-hand" match. The range was in capital order, everything having been given its spring furblishing in anticipation of the large amount of practice to be done on the range anticipation of the large amount of practice to be done on the range specially fine one for high scores, a sharp raw wind blowing down the range from the firing points toward the targets. The wind, however, was most troublesome to the marksmen by reason of its unsteadliness. The interest in the match was general and the participants included George T. Scabury, the secretary of the National Bilbs Association, Major George Shorkley, United States Army, Capitain S. Scillin, of the National Ginard of Connecticut, and P. G. Sandiord, of New Haven. The shooting continued all day, there being seventy-two entries, and there was a close bid for top place. The conditions provide for the competition to run through five days of the present month, the shooting to be at 29dyds, with any rife and from the shoulder. The entries are unlimited and the rank to be made to the present month, the shooting to be at 29dyds, with any rife and from the shoulder. The entries are unlimited and the rank to be made on the present month, the many properties of the competition of the present month, the shooting to the present month, the scores on May 2 were:

J. W. Mangam 33 38 29-55 J.C. Mallow 29 29 30-88

any person may enter and shoot without competing for a place upon to team.

Open to everybody. Distances (this day, First Stage), 200, 500 and 600 yards, soven shorts at each distance. Standing at 200, prome (i. e., b) into "head toward the target," for stding at 200 and 200 yards. Any the standing of the short of the standing between distances.

Members of the National Gnard entering this match will not be required to appear in uniform. Entrance fee for each stage, upon each day shot, \$1. Re-entries, at \$1 each, time permitting. For this month, seven prizes to be awarded on Saturday, May 27, to the corresponding number of competitors who, in order of merit, shall have made the highest complete score (7 shots at 200, 500, 600, 800, 800, 900 and 1000 yards,) as follows, cash: \$16, \$10, \$5. \$5, \$5, \$5, \$5.

Shari nave histor the highest confinence on the control of the season, three medals, offered Also, to be awarded at the end of the season, three medals, offered by Gon. Robert Olyphant, as follows: To the competitor making the highest aggregate complete score in any three competitions (determined by adding together the highest complete scores made in any of the three competitions), a gold medal. To the second highest, as above a silver medal; and to the third highest, as above, a brouze medal. It was not a very satisfactory day; during the 200 yards shooting the first segment of the wind moderate, but with the mid-range shooting the third. The unpromising day also no doubt kept many would be contestants away from the range, and altogether it was not a very enjoyable first step in the field work of the International Match. Dolan the leader used the identical rifie with which Co. Gildersleeve won his place on the first team to shoot against the Irish riflemen. His wilning now does not speak much for the progress which has been talked about in rifle making during the past half-dozen years. Several of the men were under the weather, and the general rustiness of an opening spring match is observable in the scores. Backofen, usually a very reliable shot was almost unable to hold is when the follow start is a start of the second of the scores shoot:

During the day the Amateur Rifle Club match at 290, 500 and 690 decided was short, 10 shots each distance, Dolan whaning it with a score of 120 to the possible 19. The 80, 900 and 1 Algor Goorge Shortley, U. S. A. Ober and the possible 19. The 80, 900 and 1 Algor Goorge Shortley, U. S. A. Ober and the competitor in this match, bad what came within a very marrow chance of being a sovere accident. He was using a Sharp military rifle, which had recently been chambered out to take a 25 inch straight shell into which 10 grains of powder could easily be put; with such a charge he fired his first shot at 500/xds., when the bursing of the new carrindge shell allowed the gasses to pass down between the sliding breech block and the end of the burrel. The first was palmed to the control of the surelly of the mechanical properties of the right shell and of the control of the right band and so did not grasp the barrel in the usual manner. Had the biece been held in the ordinary fashion the charge would have blown the fingers of the right hand off. The mishap is valuable as a caution and should teach our rifemakers that the explosion of 10 grains of comparatively quick burning powder generates a force which should be confined in the most secure fashion. In this instance it carelises that the confined in the most secure fashion. In this instance it carelises the shell to rupture.

INTERNATIONAL MATCH.

THE following circular has been issued by the president of the National Rifle Association: NEW YORK, May 1, 1882.

To the National Guard and Militia:

The National Guard and Militia:

The National Guard and Militia:

The National Ride Association appeals to the National Guard of the United States to turnish from its members skilled riflemen to sustain the honor and reputation of the United States in the coming international contest with the British Volunteers.

These British citizen soldiers, with characteristic plack and public spirit, come from Europe to contend with us at Creedmoor for a world-wide reputation as riflemen, and it becomes us as a challenged American marksmen to meet them with the most expert shorts in our Guard, and with frank, soldierly spirit of rivalry, contest for supremacy at the butts.

American marksmen to need men with a more secondary and with frank, soldierly spirit of rivalry, contest for supremacy at the buils. Soldierly spirit of rivalry, contest for supremacy at the buils require our team to be selected "from active members of the uniformed National Guard or militio to the United States." Soldiers against soldiers, our National Guard of America against the Volunteers of Great Britain. No honorable means will be spared on the part of this association to have our team win, as this is a truly international struggle, and we appeal to you, officers and men, to sustain us and the reputation of your organizations by bringing to the front your best material.

The Commander-in-Chief of the State of New York, his Excellency Governor Cornell, and his staff, fully recognize the forme which you will win, and in his General Order No. 11, dated Albauy, April 21, 1882, States.

states;
"It is the desire of the Commander-in-Chief that the National
Guard of this State shall be worthily represented in the American
team, and to this end a trophy or money (optional) to the value of
fifty dollars, will be given by the State to each man accepted on the
team."

"He the desire of the Commander-n-ther blat he Antonai Charlot in State Shall be worthly represented in the American that, and to this State shall be worthly represented in the American that, and to the sale to onch man accepted on the team,"

Every reasonable facility will be afforded to any and all National Guardsmen desirous of practising at Creedmoor for places on the team,"

Every reasonable facility will be afforded to any and all National Guardsmen desirous of practising at Creedmoor for places on the team, and the association will be glad to furnish full information to any one addressing its secretary.

The following extracts from the programme may prove of interest. Team.—On American side; to be composed of twelve active monthly of the control of the composed of twelve active monthly of the control of the team unless of the switch of the control of the control of the team unless of the vision of the same day unless otherwise specified.

All persons authorized to compete in the final competitions for the selection of the team shall have the free use of the range at Creedmoor for practice for two weeks prior to such competitions for the selection of the team shall have the free use of the range at Creedmoor by the competitions properlions for the condition of these competitions for the selection of the seam shall have the free use of the range at Creedmoor by the competitions representing the several States. GJ Feye. 2 4 4 2 3 5 8 7 7 2 -44 -450 On Thursday, May 11, the long range weekly combination match for the season commences, and will continue on successive Thursdays, closing November 16. The conditions are open to all comers. Entrance fee, St.160; distances, 800, 900 and 1,000yds; 45 shots. Rithermen to be divided into two classes, and to enter under but one name throughout the season. All rifemen having a record of less than 216 to have option of shooting in second class. Prizes, one-third of entry fees in each class, to be divided weekly into three cash prizes, 35 per cent. to second, and 32 per cent. The class of the class of the match added together, and the three competitors in first-class having the three largest amounts, shall be suitied to the Victory medals—gold, silver and bronze—in order of merit, provided no com-

petitor in either class (having entered not less than eight competitions at which said competitors were present), shall have made a higher average in proportion, and provided no expense for medals is incurred by the association. In determining averages between competitors every shot fired in matches in which both are present shall percent, at 80, 100 per cent, at 80, and it is per cent, at 80, and the percent of the second percent percent of the second percent percent percent of the second percent percen

week.

ALBANY, May 5.—The fine weather brought out a number of riffemen yesterday afternoon. For the first time this season a match at
the mid-range distance was shot, and, considering the lack of practice,
the scores were very good. Mr. L. Geiger of Hudson won first place
in the three distances match, and the first place in the mid-range
match went to M. Murphy, and as Mr. Murphy has not slot since last
season, he has reason to be proud of his victory. The scores made
were as follows:

L Geiger, R C	500	5	5	5	5	4	E	5-31	99

W. E. Q., Orange, N. J.—Where can I procure live carp for stocking a small poul? Ans. Consult advertisement of Mr. Finley.

G. W. M., New York.—You may find fair fishing between Jamaica Bay and Fort Hamilton next month. Striped base can be taken in Coney Island Creek, and later the weakfist can be hooked in Gravesphead Bay, In July and August you will find bluefishing about Sheepshead Bay, just east of Coney Island. It is early yet for good fishing, You will find better fishing in the Kills about Staten Island than at Fort Hamilton, especially the kill.

For Hamilton, especially the kill.

J. W. Doughkeepsio—Are shad confined exclusively to American stars, and is the "May fish" of German waters (Majfish) a shad world-wide distribution. The family includes the herrings, leawies, the sprat, pilchard, etc. The allis or "allies shad" of England is the world-wide distribution. The family includes the herrings, leawies, the sprat, pilchard, etc. The allis or "allies shad" of England is the "twaite shad" of England, called "gold fisch" by the Germany, and is known as Chupea diosa. Another allied ish is the "twaite shad" of England, called "gold fisch" by the Germans, the Chupea finta.

J. D. E., Murdock, Minn.—The spaying of a bitch is an unnatural, and in our opinion a cruel operation, although it is claimed by some that the operation is successful if performed just after the subject is desired end, or else the animal so treated was injured in her health, and in two or three years degenerated into a fat and laxy beast until for field use. We have also known cases where the subject has dien consequence of the treatment.

R. H. D., Canandaigua, N. Y.—Has the receipt for preserving natural inconsoruce of the treatment.

MAGGIE'S RECORD.

MAGGIE'S RECORD.

MAGGIE sailed her maiden race on Saturday, 25th May, 1878, on the Thames, having entered for the 20-tons match of the Nore Yacht Club, which, up to this year, adopted the system of giving no time-allowance. Maggie, however, was credited with five minutes' time from the three twenties, these being, first, the famous Vanessa, originally built in 1873 by Dan Hatcher, for Mr. H. Sparvel Bayley, who raced her hard and won a prize every time, save on two occasions, when she was disqualfied. She was purchased and reced to them in 1876 the became the property of Mr. P. Cox, continuing her victorious career under him until 1878, when Mr. R. Borwick bought her. The second twenty was Enriqueta, also built by Hatcher in 1877 for Mr. W. G. Jameson, of the Royal Irish and Royal Alfred Y. C., and which proved a sharp thorn in Vanessa is side, and the third was Frederica, decidedly a second-rate, built in 1877 by E. P. Harris, of Fast Donnyland, for Mr. F. N. Pochin, and which, on the four occasions when she met Maggie, was an advanced the property in this race, the weather being pality in the extreme. She finished third, nearly 15 minutes astern of Euriqueta, and seven of Vanessa. She this can be the language of the She was again and show off her powers in this race, the weather being pality in the extreme. She finished third, nearly 15 minutes astern of Euriqueta, and seven of Vanessa. She came again to the line on the 27th, in the Junior Thames Y. C. I5-tons match, beating Torch nearly 19 minutes in a moderate s. whereas. On the 28th, she was again matched with Vanessa, Euriqueta and Frederica in the 20-tons race of the New Thames Y. C. There was a fine n. e. preeze, in which hold Vanessa and Euriqueta proved to google, in this race, nuet with an accident to her bowsprit gear, and was without a jib for some time, which, of course, told heavily against her. On the 1st of June, in a moderate n. e, breeze, she sailed in the Junior Thames Y. C. Andidap race from South End to the Thawich, a distance of 40 miles

ica and Lizzie (23), but saining as 16 under its allowance for yawis. Inzide had been one of the most famous 20-tonners in her day, and had been built in 1898 by Hatcher, for Mr. C. H. Coldington. Specify reached the top of her class and was a worthy precursor of June 11 saw Maggie run away from Lily and Zephyr, both tens, in a strong reaching breeze from s. sw., when she averaged 96 knots an hour over a 40 mile course. The race was for 2-tonners, and sailed under the flag of the 160 yall Thames V. C. Her next appearance was at Ostend, where the hospitable Belgians offered a £20-prize for 15-tonners, which Maggie won in the hollowest manner, beating Bonita (10) by over an hour and a half, and Comet (14) out of sight, wind and since. The large are sizelly engaged in the big race for the King's Cup. Looking in at Southampton, with five winning dags flying for seven starts, she started, on 231 July, in the Royal Cornwall Y. C., winning easily from Dudu and Mohican, the latter a nice ten built 1870 by Phillip, of Dartmouth. On the 35th, at the Royal Western of England Y. C. regatta, she gave Dudu an 11 minutes beating, and disposed assily of Volga, Mabed and Ripple. On the 35th, at Weymouth, she lost first prize in the R. Dorset Y. C. 30 tons match to Vanessa, but secured second, beating Maia (29) badly, alosquito (14) and was the longest twenty afloat. Her ballast, lead, was nearly all contained in the keel, in the same fashion as Vandaara's was later. Mosquito, built in 1874 by Dickinson, of Birkenhead, was well known on the Mersey and in Irish waters as Queta, 10 tons, having been shown to the property of the same and the second and single of the first prize in the same fashion as Vandaara's was later. Mosquito, built in 1874 by Dickinson, of Birkenhead, was well known on the New York of the same fashion as Vandaara's was later. Mosquito, built in 1874 by Dickinson, of Birkenhead, was well known on the New York of the same fash and the season, already referred to as owner of Enriqueta (30), who was a lot of priz

made the course a reach both ways, Maggie spreadcagled Dudu, Iblegonda and Torch, and nearly saved her time on Vanessa, which was sailing over for the 28-bto prize. She came in over 28 minutes ahead of Dudu, and over 28 ahead of Ildegonda, which Torch and already teatren, when the ladd of the course of the co

1874 by Phillip, of Dartmouth, winding up her season on October 1, by beating Georgie (15) in a private match at Weymouth. She had started eighteen times, winning eleven first and two second prizes-chitteen.

In the property of the proper

wake was a Welsh twenty, built in 1868, at Angarsca, by Mr. F. 1809, for himself. Kelpie, built in 1871, by Jinnan, was never a formidable racer.

Maharanee, a splendid 10-ton cutter, built in 1879, at Devonport, by Waterman Brox., took first prize on time at the New Thames race on the 3d, Freda taking second, and the other yachts being placed, Louden 1975, and the strong reaching what from n. resulted in placing Maggie did in the 4th in a strong reaching what from n. resulted in placing Maggie did inter, to Sayonara's first and Louise's second, Maggie saving her time off Europe, and Viola coming in last. The Royal Thames race, user day, was a rare good one—a run down to the Nore and dead thrush against wind and tide on the return. Freda, Maggie, Louise, and Enterpe crossed the thinking line in the order given. Freda, which and third the highling line in the order given. Freda, which make third jill, saving her time on Maggie and taking first, while the fifteen honestly beat the other two. Sayonara and Louise were also in the match, but got into collision of Southend and gave up, the former losing her bowsprit. On the 11th, in the 32-tons race of the Alexandra V. C., she was beaten by Freda, Sayonara, Louise and Suterpe, but bent Viola in the fresh breeze, reversing the order of things next day in the handeney race of the same club from Southend to Pro white of wind, she defeated, without allowance of time. Sayonara, Iddegonda Kelpie and Bantry, the latter a 23-tonner, built in 1883, by Fife,

Boltomer Freds, in which he raced as head as the second first and second prizes.

Maggio wissold hast fall to Mr. F. Warren, of Liverpool, and sailed Maggio wissold hast fall to Mr. F. Warren, of Liverpool, and sailed Maggio wissold hast fall to Mr. F. Warren, of Liverpool, and sailed the month of the Morey, whence she is to be shipped this month for Boston, in charge of Harry Randall, of Hythe, who was mate of her under George Row in 1889 and 1881. When Mr. Taylor bought Freda, Randall went in her as mate, and having been skipper of the famous 10-tomer Lily, and mate of Coradic, 30-ton cutter, under Phillips of Vanessa fame, it is certain that he will sail Maggio of all she is worth.

For all set is the set is a set is a story because of the sail set is a set is a set of the set is a set is a set of the set is a set is a set of the set is a set of the set is a set of the set of the set is a set of the se

PAINTS AND SPAR COMPOSITION.

THERE is nothing more disappointing to the yachtsman than to find that after paying a high price for paints and going to a deal of trobble in recording his hort, a few days exposure to the inducement of trobble in recording his hort, a few days exposure to the inducement of trobble in recording his hort, a few days exposure to the inducement of the ind

this work. The publy user on march the shade of paint as nearly as possible.

Stant wear should be colored to match the shade of paint as nearly as possible.

A work and day better in a warm atmosphere—bence in extremely cold or damp weather the addition of a fittle liquid or patent drye or may be required. Use a brush of good quality, and do not attempt to spread the paint too thinly, nor now on so much as to cause it to run. Shabby-looking sides, rutsy, weatherbeaten spars, and bleached or smoky colors in the cabin are benished by exercising a little good sense in selecting the brands to be used, and as the Pierce paths can be shipped to any parts by sending an order to their headquarters, 170 Fulton street, there is no excuss for haring worthless stuff paimed off upon you. Durability is of some consequence in yachs, to say the study of
A MODIFIED CUTTER.

A MODIFIED CUTTER.

Editor Forest and Stream:

The Oswego yacht Acet is to have an addition to its alreay large number of boats. A fine new yacht, which is to be fitted out and finished in the best improved style, has been launched in Boston for Col. John T. Mort. Her dimensions are as follows: Longth over all depth of hold in the control of the con

NEW SINGLE HANDER.—We have had the pleasure of inspecting the model for the new single-hand cutter described in our last issue. This is to be a "big little" hoat, finis deck on 2ft. load line, with about the first the model for the new single-hand cutter described in our last issue. This is to be a "big little" hoat, finish deck on 2ft. load line, with about the finish and the single property of the model of the single property of the single sides. The bow is just fine enough, the water line half-way down only. We watch the development of these small single property w

dozen hig schooners built for ostentation and reveny, which speak most of their short two or three months easins winging idly to their moorings.

LARCHMONT YACHT CLUB.—This enterprising club exhibits something like the spirit we love to see. The new club house at Larchmont Manor has been opened and is one of the finest, largest and most complete in existence. Besides parlors, meeting-rooms and offices, there are berths for about fifty in the building. A cateror, especially engaged, will held forth in a restaurant attached, so that the house will form a permanent headparaters and rendezyous for the feets cruising in the Sound during summer. A pier and float reclaims of mito the harbor which is being surveyed and buoyed. As reclaim to the harbor which is being surveyed and buoyed. As the shady web situated, as the club grounds can be roadly reached by train from the Grand Central Depot, so that owners may run down for business during the day and rejoin their vessels in the evening. We hope that a club which has exhibited so much reclaimable desire to advance the interests of sailing, will yet see fits way toward abolishing shifting ballast, so that small, alle cruisers may find congenial companionship under its colors. We take it that the club wishes to encourage such boats, of course, and in the rapid accession of large vessels to the fleet, dows not propose to overlook the claims which mustering of the art of sailing is legal in liew. Wherever a practical mustering of the art of sailing is legal in liew. Merever a practical form their sound merits to the more flashy but less substantial display of the buy for some flashy but less substantial display of the buy for sailing is legal in liew. Merever a practical from their sound merits to the more flashy but less substantial display of the buy for sailing is legal. In the wind the substantial display of the buy for sailing is legal, the wind and the rapid of the buy of the art of the flash when the wind of or the sailor. And the will be substantial display of the

beams is 12in, deep and din, thick, of yellow pine, copper fastaned through frames. Thoroughly Incest throughout with handing braces on mast beams, all astened with copper. The stanchions in make of shrouds are secured to frames by a composition strap 12in, long, 25pin, wide and 35pin, thick, to take the npward pull of the shrouds. Whales of oak 5xdin; bottom plank of oak 25pin, thick: deck plank 25pin, square, all copper and composition fisterings and best locust freenable 12pin, diameter. Water tanks hold 2,400 gallons. Bullast, sixty sign. The schooner in type, build and fittings is one of the local every taken in hand in America, and much superior to the average practice of New York builders who have not yet progressed beyond galvanized from spike work and soft wood plank.

SINGLE GUN STARTS.—The matches open to all, fixed for Max.

of Now York builders who have not yet progressed beyond 'galvanized iron spike work and soft wood plant.

SINGLE GIN STARTS.—The matches open to all, fixed for May 80, will mark an event worth special record. The start will be nade to a single gun. All time taken from gun, five. No period of med innutes to wake up. We predict that the life, bustle, exclining interest and display of smart salloring the simultaneous start will produce, it is certain to become popular in Boston, where the numerous Corintinian tars know a bit of quick-witted scamanship when they see it small appreciate it too. "Time from gun fire" is the start of the smart yachtsman and the start for the public to witness. The hired louts in New York waters do not fancy live business. Too much work for the pay. But New York has condescended to follow Boston in the accept the Boston get-away too, good for the Dorchester. Loudent accept the Boston get-away too, good for the Dorchester. Loudent which is the consists of the following well-known yachtsmen, who know their business from havspipe up; C. H. Whiting, F. E. Peabody, E. B. Clark, G. H. L. Sharp, and L. M. Clark. Bang! There goes the gun; and see the break; all hands will make for the line, and watch how close some follows have hit off the time to anicety, and how the lot he course, and you have the winnersure. It will be simply placing the allowance known to be due from one to another at any point of the course, and you have the winnersure. It will be simply placing the ligible to the onlooking crowd, from whom fresh blood is to be recruited in the future.

cruited in the future.

SAN FRANOISCO YACHTING.—At the opening cruise over 500 guests assembled at the club house at New Saucchito to see the fleet off for the cruise to Vallejo. Light and variable winds were the formuse of the squadron, and not much was done in the way of friendly the schooner Aggie will follow the Light on were quite likely that the schooner Aggie will follow the Light of the control of the first open control of the second part of the schooner Aggie will follow the Light of the control of the first open control of the control of the first of the first open control of the control of the officers and individual members of the control of the first of the first of the first of the control of the first of the

ALBANY YACHT CLUB.—Editor Forest and Stream; The following officers have been elected; Commodore, William W. Grey; Vico-Commodore, James W. Rooney; Secretary, F. H. Thomas; Treasurer, R. D. Evans; Stewards—F. E. Cooley, G. H. Waggoner, Henry Sam, J. H. Cherk, William J. Carrann, Inspectors of Election—A. J. Shaffing condition. We have seventy-flye members who possess to me good and fast boats—the Cynthia, Artful Dodger, Coquette, Hi Pl. Breeze, etc. We own our club house, built last year, situated on the Greenbush side of the river, opposite the city, and the latch-string always hangs on the outside for any visitors who may pay a visit to the capital city.—G.

YAWLS.—A correspondent writes from Name of the control of

the capital city.—G.

YAWLS.—A correspondent writes from Newport: "As soon as my stop is soid, it propose building a larger yawt, as I am convinced by your able articles that it is the proper rig for a craft for single-handed crusting. I can handle a larger boat if yawl-rigged and gain handle a larger boat if yawl-rigged and gain culty in handling than any present beaun; vessel; the one more different and the control of th

PERIMYNIKIE.—A STREAM MAY CHAIM the credit.

PERIMYNIKIE.—A strange craft made her [appearance in these waters, and brought up off West New Brighton in the kills last Sunday. She is a yacht modeled and rigged after the Block Island beat style and hails from New Bedford. She is bound on a long cruise for the summer. About 38t. long, with over off, height in cabin, and drawing off. of water. Rigged as a double act, one must in the eyes and the other at the atter cabin bulkhead.

and the other at the after cabin bulkhead.

ATLANTIC YACHT CLUB has permanently fixed the annual club matches for the Tuesday in June within four days of the new or full moon, providing that the Tuesday does not fall before the 5th or after the 20th of the month. Other clubs can regulate their dates accordingly. The sailing rules have also been revised and brought nearer to the Y. R. A. standard as advised in these columns.

STILL ANOTHER CUTTER.—The stylish little ship recently humed over to Mr. Paduleford by the builders, Lawley S.Sin, of City Point, Boston, will have a train of followers in her waite. The same builders have already in frame another beauty of some tifteen tons. She is to be a thoroughbred cutter like her predecessor, and is to swing ten tons of lead on the keel.

SILVER SPRAY.—Mr. Gower, of Providence, R. I., has bought the English schooner Cutty Sark, 121 tons, and ronamed her Silver Spray, She is 87.4ft. stem to post, 18.1ft. beam, and 10.6ft. deep, with 10ft. draft. Built by White, of Cowes, in 1874. She is bound to the Mediterranean.

HULL YACHT CLUB.—At last meeting twenty-nine new members were added and five yachts were listed. Admission will be increased after June 1. The new club house promises to be a handsome and useful structure. Ceiling has commenced.

KNICKERBOCKER YACHT CLUB.—Jir C. A. Winters has joined the club and will fly the burgee from his keel sloop Lona. So that Gem and Lena, both recently imported from Boston, will still remain cruising mates.

Gem and Lead, so for recently imported from Boston, will still remain routising mates.

VOLUTE.—Mr. C. A. Brown is refurnishing the Volute, formerly the Boston Vision, in the Seawanhaka basin. She is to have all convolutions and forward bulkhoad, the intention being to cruise to the convolution of the property of the convolution of the property of

PUBLISHER'S DEPARTMENT.

The well-known firm of Decker Bros., manufacturers of billiard tables, pool tables, etc., have recently been compelled to seek more commodious quarters. They have been long situated at No. 228 Broadway, but had not room enough for their present increased business, hence the change. They are now located at No. 722 Broadway, where they invite an inspection of their fine tables.

business, hence the change. They are now located at No. 722 Broadway, where they invite an inspection of their fine tables.

Cuts.—A well-balanced one is desirable always. Even a poor player may have his game improved by the use of a properly made cue, and with a professional it is most essential. Cuts at one time were regarded of little value if they were not imported from Paris. Now, there is a superior one made in this country. We make in the United States a neater, better-inshed, and handler one than can be manufactured in France, and in place of importing from Europe, they are now being exported from America. The Collender Company makes now being exported from America. The Collender Company makes they working for them. Heart fancy and plain cuts are fixed of any others in the market.

Franceson's Jack-Laur.—The inventor of this justly-celebrated lamp has recently invented a head attachment by which the lamp can be adjusted to the top of the head. It is so arranged that the lamp can be turned in any direction, enabling the hinter, whether right or left handed, to bring the light to bear full on the game, when auming. It will lift any sized head. Can be worn over any style of bat commonly used in the woods, and when not in use can be made into a package small enough to be carried in the coat pocket. The lamp listly has been very much improved since it was first introduced, nearly four years since, and is today, with its attachments, without doubt the turned combining all the essentials of a perfect head-jack host-jack host-jack fishing-lamp, camp-lamp, dash-lamp, dark-lamper, and hand-lamper Illustrated price list, giving full description of the lamp and its attack-ments, mailed on application. See his advertisement,

RIVERS.

COMPILED BY

THOMAS SEDGWICK STEELE

Author of "Canoe and Camera."

This is the latest and best map of the great canoe ing region of Northern Maine. It comprises the country described in Mr. Steele's book, "Canoe and Camera," and the forthcoming volume, "Paddle and Portage." It embraces a portion of CANADA on the north and NEW BRUNSWICK on the east of Maine, and is an invaluable guide for the sportsman and tourist in that wonderful country.

The chart is 20x30 inches, printed on Govern-

ment survey paper and mounted on cloth. Sent postpaid on receipt of price, \$1.

The Gun and its Development

By W. W. GREENER. FOR SALE AT THIS OFFICE!

Price \$7.50.

The Parker Gun.

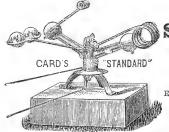

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Our Readers will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the Forest and Stream, but who would presumably be interested in the paper.

GAME PROTECTION, PUBLIC AND PRIVATE.

THE Legislatures of many of the States have either finally adjourned, or may be shortly expected to do so, and it will be in order to look over the ground and see how far the game laws have been improved. We have before expressed it as our opinion that these acts in many of the States are very well as they are, and only require to be rigidly enforced to be productive of great good. It is clear enough that the best laws in the world will do nothing for the protection of game unless some vigorous organized and united effort is made by those interested, to see that these provisions are carried out There are a few-sorry we are to say that they are so fewsocieties which work hard for the enforcement of the law, and a large number of enthusiastic gentlemen who do what they can. But individual effort can never have the force of concerted action, and the public at large do not as yet see the vital importance of encouraging by every means in their power the protection of game.

If, however, each man, who believes that the laws regu lating the killing of game and fish should be enforced, will endeavor to use his influence to encourage respect for the laws and to instruct his neighbors in them, a great deal of good may quietly be accomplished. A considerable portion of the illegal pursuit of game is the act of persons who really do not know that they are doing what is wrong, and into such people, if approached with tact, and talked to in the right way, a wholesome respect for the statutes may be instilled. There is an old and true saying to the effect that "you can catch more flies with molasses than you can with vinegar," and many a man can be deterred from shooting out of season by a little quiet reasoning and persuasion, who would only be strengthened in his defiance of the law, if threats of prosecution were used against him. Such men can often be lead, but will not be driven. The story of a few years' quiet work of this kind is told to-day by a cor-

us to do what we can toward preaching the gospel of game protection, and thus securing additional recruits to work for

If each man who reads "Juniata's" experience will try in a quiet, unostentatious way to act on the plan there laid down, we are persuaded that good results would follow. Of course there are individuals who are amenable only to the reasoning of force, who refuse to acknowledge the weight of any argument that is not enforced by the persuasion of a club, but the average man, be his station in life what it may, can usually be coaxed and pushed, in a direction which he does not wish to follow, faster and further than he can be driven.

So we urge all our friends, and especially those who reside in the country and in neighborhoods where game is to be found, to use their personal influence with those of their neighbors who shoot and fish, and by argument and persuasion endeavor to elevate the standard of morality in regard to obedience to the game laws. There is no man so dull as not to be interested in the operations of nature which are going on about him, nor any who, if he can be induced to talk on the subject, will not have some observation of his own to detail to an attentive listener, and by encouraging this interest in the workings of nature, a real affection and an active care for the live creatures of the woods and fields may be brought into being, which will make the interested man go out of his way to protect them. Often a little push in the right direction is all that is needed to turn a lawbreaker into an unpaid but active game protector.

It is the duty, as it should be the pleasure, of the readers of Forest and Stream to do what they can to educate their neighbors, and thus the general public, up to the plane which they occupy. They are already a power in the land, but they should be even more so than at present. Let every one of them do his part and a public sentiment will soon be formed which will do more to restock our covers than all the game laws that have ever been passed.

THE DELEGATE FROM WILD ROSE POINT.

OVELY among the waters of Central New York lies LOVELY among the waters of Central New York nes Otsego Lake in its setting of lofty hillsides. Charming associations cluster about the beautiful lake. Its shores are classic ground. Here lived and wrote James Fenimore Cooper, and many of the scenes of his novels were laid here. The lake and its vicinity were once peopled by the creations of his genius. Conspicuous among them all roved and hunted kindly, simple-bearted, brave, honest old Natty Bumppo. Who is not familiar with the life of this true souled son of nature, the Deerslayer, Hawkeye, Leather-stocking and Pathfinder? And who has not admired the high principles of the woodman, provident of nature's store of game, rich in woodcraft and considerate of nature's laws?

The sportsman of to-day who hunts through the cover and open once haunted by Natty Bumppo must of need imbibe something of the spirit of the old craftsman, and sharing his sentiments looks upon nature and nature's ways as he looked upon them.

Last March a convention of sportsmen assembled at Albany to prepare a revision of the New York game law. Many of the delegates to this convention were well known and commanded the confidence of the public; if some of the others were less known as sympathizers with the true interests of game protection and sportsmanship, still no one was disposed to doubt the propriety of their presence in the convention nor their honesty of purpose in being there.

Among these delegates, was a Mr. E. W. Thayer, from Cooperstown, who ostensibly represented the sportsmen of Otsego county. This gentleman happened to be a stranger to us. But knowing the high character of the sportsmen of Otsego county, and remembering that Cooperstown was on the shore of Otsego Lake, the old hunting ground of Natty Bumppo, it was to be taken for granted that the delegate from such an historic spot would add his honest endeavor to perfect the law for the protection of game. We therefore looked to see Mr. Thayer take a prominent part in the meet-

The delegate from Cooperstown was conspicuously active, most decidedly so. He was, in short, clamorous in his demands that the law of the State should be specially adjusted to meet the peculiar requirements of Otsego county. convention agreed to fix the open season for ruffed grouse beginning September first; but, cried Mr. Thayer, give us in respondent in another column, and the success which has Otsego county the month of August too. Shut out the nets crowned his labors ought to be an encouragement to each of from other waters of the State if you will, but, vociferated the

delegate from Cooperstown, give us the privilege of using gill nets in Otsego Lake in July and August.

So strenuously did this Otsego county delegate contend for these special exceptions in favor of his county, that we were compelled to adopt one of two conclusions—either that the interests of game protection in Otsego county were strongly at variance with the same interests in all other parts of the State, or else that the delegate from Cooperstown did not represent those interests.

Some investigation as to what and whom Mr. E. W. Thayer did represent developed these facts:

At Wild Rose Point (or Three Mile Point) on Otsego Lake is a hotel, known as Thayer's Hotel. Mr. É. W. Thayer we understand to be the landlord of the same. At the Albany Convention this gentleman represented nobody save himself and the gang of pot-hunters who peddle their birds to him; he was working in the interests of nothing but his own kitchen and the pots on his range. In so far as he professed to represent the interests of the sportsmen and of due game protection in Otsego county, he was sailing under abominably false colors.

The delegate from the Wild Rose Point Kitchen was attempting, and not altogether unsuccessfully, to pull the wool over the eyes of the other members of the convention. Mr. E. W. Thayer appeared at that convention for the sole and only purpose of working the law so that he could serve game birds to his guests in August.

We are at a loss which to admire more, the impudence of this delegate from his own hotel kitchen, demanding that the State of New York should make an exception to its general game law in favor of his kitchen pots, or the complacency of the convention and the committee which listened to his brazen demands, and actually embodied them in the draft of the proposed new law

Some little backbone is surely needed to withstand the selfishness of such men as the delegate from Wild Rose Point. It is to be remembered, too, that the sportsmen of Otsego county have some interest in this matter. Their rights should not be sent to pot in this manner. We hope that the sportsmen of Otsego county-and, for that matter, of every other county in the State—will use their influence to have this obnoxious clause taken out of the proposed law, and thus save some of the birds of Otsego county from the gang of ne'erdo-wells who dispose of their spoils in midsummer to the kitchen delegate from Wild Rose Point.

THE SHOOTING OF English snipe containing eggs in an ad vanced state of development and of ducks already paired and on their way to the breeding grounds is over for this season. The slaughter of beach birds will go on, however, for a week or two longer. For every female shot this spring, the stock of birds to return to us in the autumn is reduced by half a dozen. The short-sighted policy of keeping up the killing as long as the birds remain with us is bringing about the result which was to be expected, and the day is not very distant when the shooting for fowl and Wilson's snipe will be practically confined to preserved land. The selfish practices of the sportsman of to-day will meet with legitimate punishment, and those not interested in shooting clubs will put away their guns for a long rest. In the meantime, the best shooting grounds are being taken up, and the value of membership in regular clubs is increasing. Hotel keepers advocate the continuance of spring shooting as they do the killing of ruffed grouse in August, and sportmen's tions and Legislatures meekly accept the dictum of the Bonifaces without a word of demur. And so it will go on until our people take hold of the matter in carnest and show by their votes how they feel on this subject. It ought to interest each one of those who reads these lines, and each one ought to have something to say about it. Every man who can influence a vote in the Legislature ought to speak up, and in no faltering accents declare that spring shooting must be stopped.

SALE OF MRS. VAN SLYCK'S .- Just as we go to press we are informed of the sale of the Van Slyck property in Currituck county, North Carolina, to the Kitty Hawk Club.

BY AN UNEXPECTED EXIGENCY of our "make up" this week the answers to several correspondents are necessarily deferred to next week.

The Story of the three legal anglers told in our "Sportsman Tourist" columns to-day is, the writer assures us, a true

The Sportsman Tourist.

TO THE SPORTSMAN.

LOVER of Nature, when the hills are brown From frosts, and woods in glimmering gold are clad, What joys are thine! How often overglad For sleep, at the first peep of day adown The dewy path thou goest from the town, Eager to taste the pleasures of the field. Sweeter to thee that joy the brown hills yield Than to the warrior is his high renown.

For thee all seasons charm. When ardent June Robs of his ease the toiling citizen, Thou, safe from feverish airs and heats of noon, Takest thy ease in some wild shadowy glen
On grassy bank of stream, whose witching rune
Has lured its lover from the haunts of men.
Gainesville, Ark.

BOB, THE ANGLER OF THE SCHOODICS.

BY LEW VANDERPOEL.

BOB, THE ANGLER OF THE SCHOODICS.

BY LEW VANDERPOIL.

IN 1857 our office was in New York. The sign over the doorway read "Blifklins, Simkins & Jones, Attorneys and Counselors at Law." On the morning of September 1st, we, Blifklins, Simkins and I., the three members of the above frun, met in our office to consider the advantages and propriety of spending a month in the Maine woods. The mercantile collapses of that eventful year had given us over-abundance of work and we needed recreation.

Arrangements made, in a day or two we started for the Schoodic Lakes. A weary journey by rail, another by stage, then a romantic ride in our guide's wagon and we were there. We reached the lake at sunset and thought the land scape the loveliest we had ever looked upon.

Our guide was the then famous "Schoodic Bob," and his roomy log cabin stood at the water's edge, the forest flanking its other approaches. We had the impression that Bob was unmarried and was his own domestic. Imagine our surprise, then, when he introduced his daughter, a blooming ex-schoolma'am of twenty-five. They had seen better days, and Bob was not always a guide. On the death of his wife, several years ago, Edith, his daughter, left her prosperous school in a Southern city and came home to live with her father in the wilder North.

How tired we were that first night, and how hungry; and then the supper that was set before us would have delighted a king. Smoking hot johnny-cake, sweet butter, broiled pheasants, fried fish, baked pointoes, stewed cranberries and fresh ginger-bread. It was over twenty years ago, but I can taste it yet.

Immediately after supper we climbed up under Bob's eaves and slept until he called us in the morning, the pines and spruces sighing, and the owns, loons and panthers hooting and screeching unnoticed all night. And he had to repeath is call several times before he could awake us for breakfast, so soundly did we sleep in our beds of downy, yielding goose-feathers.

Anticipations and the surroundings gave us splendid appetites

best fight. She good-naturedly forgave the demolition, and afterward stored her valuables in places not accessible to me.

We had been there five weeks and they passed all too quickly. Game was at our disposal in plentiful abundance, and we fished or hunted every pleasant day. The weather was mild and storms infrequent, so we spent the most of our time in the open air. But we enjoyed stormy days quite as much as the others, for Bob was an inimitable story teller. The woody freshness of his forest yarns charmed you one noment, and their blood-curdling horridness would raise your hair the next.

Edith was entertaining also; observations had finished for her what careful study had begun, and she was very much of a lady. Her efforts to make us "feel ourselves at home," often caused Bilfkins, who swore he hated her, to fervently wish he was there. But we caught him nicely one day and this is how it came about.

We were going up the lake for a bear hunt and made all our preparations the night before. In the morning Blifkins had a terrible toothache so he had to stay at home with Edith. He growled out to Sinkins and I that she was about as agreeable as the toothache, but he supposed he would have to make the best of it.

Bob found a monstrous bear early in the forenoon, and we fitter dispatched him satring for home right away after.

as agreemies and tochache, but nesupposed he would have to make the best of it.

Bob found a monstrous bear early in the forenoon, and we three dispatched him, starting for home right away after dinner. Our journey to the scene of the bear hunt had been accomplished by water, so we loaded the dead bear into the came and started down the lake. When quite near the cabin we passed a jut of low-lying rock that led to the mainland. Here Bob's hound became restless, and leaping into the water swam ashore for a run home. A few more strokes of the paddle sent us around another little cape, in full view of our ''landing'' which was but a few yards distant. And here an unexpected sight awaited us.

Edith was standing on the very water's edge with Blifkins on his knees at her feet, his arms clasped around her, doing the devoted to the girl he ''abhorred.'' The first glimpse of them had arrested Bob's paddle, and we approached them noiselessly and unperceived

"Oh! most adorable of her sex, be mine forever!" And Edith's worshipper grovelled still lower before her.

It was too comical for anything, and in another moment our mirth would have made the lake ring; but an interruption to poor Blifkins's bliss was destined to come from another quarter. Reaching the top of the knoll behind him, the hound had taken in the whole thing and Blifkins's attitude struck him as a dangerous one to his mistress. Like a thunderboth he swept down upon the suppliant who was too absorbed in his divinity to be apprehensive of danger in the rear. Edith saw the dog, but her dismay at his evident intention instantly gave place to mortilication as she also saw us. Blifkins attributed her changing emotions to a successful termination of his love affair, and rose to press the betrothal kiss on her lips as the dog made his last leap. "The bear! Look out for the bear!" yelled Simkins, bent on more fun.

on more fun.

on more fun.

A crash in the underbrush behind Blifkins, a growl of rage and the monstrous hound was on his back. A scream from Edith, a howl of despair from her adorer, a momentary struggle, and the three disappeared in the lake. Blifkins's hand clutched into the dog's hair as they came to the surface, and still thinking it was a bear bent on his destruction, roared out to us.

hand clutched into the dog's hair as they came to the surface, and still thinking it was a bear bent on his destruction, roared out to us.

"Why don't you shoot the beart"
Simkins, Boh, and I responded with such a roar of laughter as never before broke the silence of Schoodic Lake. Convinced that he was somehow the victim of a hideous joke. Blifkins got out of the lake the best way he could and left Edith to the mercy of the dog. The latter was more of a hero than Blifkins and gallantly helped her out.

They were entirely uninjured, but Bob, Simkins and I had to eat supper alone that night, Edith was out of patience with Blifkins, and he was mad at all of us. The next morning he started for home, Simkins and I decided to remain on the lake a few days longer, so he had to go alone.

To own the truth, we had all three been very favorably impressed with pretty Miss Edith from the first; each of us had determined to win the prize for himself, and cach was also in ignorance of the resolves of the others. Blifkins was now in disgrace, and, of course, no longer an obstacle; the coast was clear for Simkins and I. He tried all the persuasion there was in him, failed and went fishing up the lake. I remained at the cabin busy with my letters.

She had given me more smiles than she had the others all along, and to-day she was sunnier than ever. I was unmistakably the lucky man, and opened the siege for her heart and hand, positive of success. She seemed much surprised, wept a little, said she was sorry for me but she was already cngaged. I went fishing down the lake.

Somehow Schoodic Lake had lost its charm for Simkins and I, "neglected business," called us home, and in a few days we had followed Blifkins to New York.

He had been called to Ohio very unexpectedly and would probably be gone until the middle of November. Poor fellow, he laid his disappointment more to heart than Simkins or I; we sincerely pitied him and cursed that trip to the Maine woods for his sake.

A couple of days before Thanksgiving, we received invi

pathy.

Simkins and I attired ourselves faultlessly, and rang for admittance at the Blifkins mansion on the appointed day. A polite servant ushered us into the drawing-room and we were presented to—
"My wife: Mrs. Blifkins."

We raised our eyes to gaze upon his new angel and beheld Edith, the school ma'am! You could have bought Simkins and I for two cents apiece.

OREGON HILL AND ANSLEYS.

A PASSING allusion to the flat-iron shaped plateau lying between Big Pine Creek and Little Pine Creek has brought so much inquiry, so many letters, that I feel it due to health-seekers and tourists to give further information. The Indian name of this hill signified "Broad Mountain." Almost the entire hill is underlaid by heavy veins of coal of the best quality, and the day is not so far distant when the barrens of Oregon Hill will be worth more than the best bottom lands in the Connecticut Valley, acre for acre. At present the coal is one of—

"The gifts there was found no place for.

barrens of Oregon Hill will be worth more than the best bottom lands in the Connecticut Valley, acre for acre. At present the coal is one of—

"The gifts there was found no place for, The riches we could not use."

Standing at Camps Corners, looking southward, you have on the right, miles away, the deep valley of Big Pine Creek. Five very fair trout streams "head" in springs on the hill, and work their way tortuously and swiftly down the Big Pine. The first is Big Run, a cold, brawling stream, prolific of small, dark, fine flavored trout. It heads within two or three furlongs of the Corners, and there is quite enough of it to afford a day's tramp and sport. The next stream is Trout Run, a few furlongs further south. It is an excellent trout stream. There is a mile and a half of good fishing for small trout, when the stream tumbles and foams over a rocky cascade into a pond forty rods long. There is a mile and a boarding house at the pond, but deserted and fated to rot down, as thousands of like establishments have done and are doing now. The house is in good repair now, however, and anyone is free to camp there. There are trout in the pond eighteen inches long for those who cau coax them to strike, but they are shy. Below the dam there is about two miles of excellent fishing for trout of six to eight inches in length below the pond. It is three miles from the Corners to the pond, and H. G. Matoon, P. M. and country store-keeper, will drive parties to any fishing ground within five miles of his house, every morning, free of charge, said parties, of course, being his guests. He will also fit up bunks of hemlock browse at the old boarding house by the pond, and forward the wishes of health-seckers and sportsmen to the best of his ability. His prices are not exhaustive—four to five dollars per week. Matoon can make comfortable eight to ten guests. The neat little hotel at the Corners is kept by G. L. Dodd, who can take good care of twenty to thirty tourists, and will treat them to about the same treal should manuac

work down from the Corners to Cedar Run. And you want a team to go back again, but it is interesting and worth the

work down from the Corners to Cedar Run. And you want a teum to go back again, but it is interesting and worth the trouble.

Still looking southward, on the left, some three miles distant, you have the deep valley through which runs the Little Pine Creek. Heading in cold, clear springs, four rattling trout streams "ripple away in shade and sun," to the south and east, as the five on the other side, to the south and west. The names are: First, Hughes' Run; second, Bunnell Run; third, Otter Run. The latter is the largest, has a dam with the usual mouldy ruins of a disused lumber camp, but there are large trout there, which may be taken by the expert angler. I ought to add that the main stream, Little Pine, is the best for the fly-fisherman, but it includes a steep descent of three miles with a corresponding climb for return, though one may find comfortable quarters on the stream, either at Texas or Englishtown, and climb back in the cool of the following morning. I have omitted English Run, which, should be third on the list. It is a rapid brook, well stocked with small trout. On the whole, there are ten trout streams within reasonable distance of Camps Corners.

In the open season Oregon fill is the best place we have left for grouse, and as good as any for deer. It is reached by Erie Railway to Corning, and from Corning to Antrim by rail. From Autrim to the Corners is nine miles, rough, but romantic route. Matoon or Dodd will meet parties at Antrim with good spring wagons if notified in time. Charges very low.

In another direction, up Big Pine Creek, the Harrington House, Izaak Walton House, and Ansley House all have claims of weight with the average tourist as regards health, rest and sport. At each and all of these points fair wood cock-shooting may be found in the season, and usually pigeons. There is some fair trout-fishing, and the hotels are apt to have a moderate supply of high flavored mutton as soon as deer are in the red coat.

These resorts are easily reached by rail to Corning, to Wellsbord, and th

SOME WISCONSIN RESORTS

SOME WISCONSIN RESORTS.

I CANNOT get time myself to go fishing or gunning, but occasionally when out on a business trip I see so much promising land and water that I interview the natives, and yow that in the sweet bye-and-bye I will tear away from work and enjoy myself. Within twenty-tive miles of this city is Long Lake, a sizeable body of water, in the depths of which lurk, according to the assurance of a competent angler, fine gamy bass and sizeable pickerel. A few of our citizens resort there during a portion of the summer, but the place is never crowded, although is is the most extensively, patronized of our resorts. Water fowl visif the lake in considerable numbers in the fall. At present this city is the nearest railway point, but the Chippewa Falls and Northern rond, building northwest to a junction with the North Wisconsin, will by August 1, take passengers within three miles of the lake.

road, building northwest to a junction with the North Wisconsin, will by August 1, take passengers within three miles of the lake.

This same railway line passes on through a comparatively little settled country, and at a distance of about thirty-six miles from here brings one to the little village of Chetek, situated on the west shore of a lake of the same name, which is connected with others in the vicinity, offering a grand opportunity for the angler, hunter or canoeist. Business called me here a few days since, and of course I had to talk fish and hunt, with a view to the previously-mentioned sweet byc-and-bye. A gentleman who had lived at Chetek some years furnished the particulars following. Within an area of twenty miles from the village are fully fitty—he said seventy at first—lakes, in any of which good fishing may be had. In Chetek Lake bass, pickerel and perch abound, About twenty-five miles northeast of Chetek is another, Long Lake—I believe Wisconsin contains a dozen or more long Lake—I believe Wisconsin contains a dozen or more long Lake. This is a grand fishing ground, and in it are taken muscalonge, whitefish, black bass, pike, pickerel and perch. Very many of the streams contain trout in good numbers, though I am told that good trout-fishing cannot be had within less than six to eight miles.

Of course such a system of lakes and water-courses must attract the attention of water fowl, and duck-shooting is said to be in the proper season "simply immense." Right at the village, or at best a short-paddle of half an hour, is obtained as fine shooting as one can wish for. Of other game I am told there are ruffed grouse, a few qualit, snipe and wood-cock, ducks and guesse galore, deer abundant—one was killed a few weeks since in the village lumber-yard, on the lake shore. Bear, lynx, wild cats and wolves are quite numerous, and foxes abundant.

Chetek has two or three houses which furnish "entertainment for man and beast" of the average country quality, Guides, good, practical woodsmen, are to be had

I propose to personally investigate this section the coming I propose to personally investigate this section the coming fall, even if I have to wear the same old ulster another winter, and in the meantime if I can furnish the Forest and the third of the control of the section
CHIPPEWA FALLS, Wis.

FISHING FOR LAKE TROUT.—In a private letter from Mr. James S. Plumb, of Syracuse, N. Y., he tells how he is going to try for lake trout this year, and at the risk of his displeasure we give what he says of it. He writes: "I expect in a few days to try the lake trout of Skaneateles Lake. I caught some fine trout last spring in this lake, the largest weighing nine and one-fourth pounds, the smallest two and a half pounds. The line used was 500 feet long, depth of water seventy-five feet, I shall try a new mode, use but 150 feet in same depth of water, and am confident of good success,"

Matural History.

SPRING NOTES.

Editor Forest and Stream:

PHILADELPHIA, May 5.

The present rain is just suitable for, and will bring many of the later spring migratory birds. The meadows in a day or two will be noisy with the notes of the bobolink, and the flocks will at first be composed of all males. The females will follow in a few days. This is what the Now Jersey farmers called the catbird-storm when your correspondent was a boy. After it clears and the sun comes out warm, we shall hear the beautiful song of this much maligned bird, as well as that of the thrush—the long-tailed fellow of the hedges—and likely the hermit of the more shady woods, whose metallic note alone tells of his presence. This storm will fetch the dowitcher from the South; he has already started, but is making his journey in easy stages. Robin snipe will follow, with the bull-head or black-breast plover, in about a week. On the New Jersey and Long Island marshes the "big tell tale" has been seen for a fortnight or more; he is an earlier comer. It is strange that we seldom or ever see the "little tell tale" on the New Jersey shores in the spring, when in August and September, on the same grounds "used" by his larger cousin in April, we find him in numbers. His migration northward in the spring must be west of the Allegheny Mountains.

PORTLAND, Conn., May 6, 1882.—The following are the dates of arrival of some of the birds at Portland for 1882: March 2d, crow blackbirds (Q. purpureus); 3d, red-winged blackbirds (A. phanizeus); 8th, fox-colored sparrows (P. ditaca;) 29th, general arrival of pewces (S. fuscus), Cooper's hawk (A. cooperis); April 1st, marsh hawk (H. hudsonius); 2d, pine-creeping warbler (D. pinus); 4th, bay-winged buntings (P. grunineus); 7th, field sparrows (S. pusitla); 15th, chipping sparrows (S. domestica); 17th, bank swallows (H. riparin); 25th, house wren (T. alon); 30th, yellow-throated vireo (L. fluifrons); May 1st, least flycatcher (E. minimus), blue yellow-bucked warbler (P. anaricana); 2d, yellow warbler (D. asticus); 3d, kingbird (T. carolinensis), bobolink (D. orgziowrus); 4th, Baltimore oriole (I. galbula), catbird (G. carolinensis); 5th, warbling vireo (V. gilva).—Jno. H. Sage.

BAY RIDGE, L. I., April 29.—Among our last week's birds are pine and purple finches on the 22d, golden-crested and ruby-crowned wrens 25th, towhee buntings, ferruginous, hermit and tawny thrushes, and one downy woodpecker 26th, one blue-headed solitary virce 27th, black and white creepers, swifts and purple martins 28th, two kingfishers, and one Maryland yellow-throat 29th. Weather still cool.—A. L. TOWNSEND.

and one Maryland yellow-throat 29th. Weather still cool.—
A. L. Townsend.

Clevelland, O., May 8, '82.—I send you a list of the birds as they arrived here this spring. January 2d, crows; 14th, Carolina doves; Pebruary 14th, bluebirds; 15th, robins and meadow lark; 21st, song sparrows; 27th, crow blackbirds; March 14th, red-winged blackbirds; 19th, cowbirds, 25th, loggerhead shrike; 30th, brown thrush, woodcock and wood-pewee; April 2d, chipping sparrow and brown creeper; 3d, red-headed woodpecker; 8th, kingfisher; 12th, grass finch; chewink, turkey buzzard; 16th, pewee and purple martin; 21st, great northern diver, barn swallow; 22d, chimney swift, wood thrush, great blue heron, rusty blackbird, yellow-rumped warbler, Carolina rail and blue-gray gnat-catcher; 27th, golden plover; 28th, house wern, long-billed marsh wren, spotted sandpiper, bank swallow; 2ath, white-crowned sparrow, | redstart, white-throated sparrow, whip-poor-will, Maryland yellowthroat, yellow warbler, yellow shanks, white-bellied swallow; 29th, chestnut-sided warbler and black-throated green warbler; 30th, green heron, American bittern; May 4th, Baltimore oriole, warbling virce; 5th, kingbird; 6th, orchard oriole. While out collecting with a companion April 28, we each succeeded in shooting, among others, a fine specimen of lark finch. They were with a few sparrows in an old corn field near the edge of a woods on the banks of the lake. These birds were quite shy, and are the only ones to my knowledge that have been captured in this part of the country. They inhabit the western prairie and Pacific coss, but not so far East as Ohio to my knowledge. If others have been shot in this part of the country is should be happy to hear when and where.—
SEYM. R. INGERSOLL, [The lark finch (Chondestes grammaca) has been taken as a straggler in New England. Several records from Massachusetts. See "New England Serial Lark and the proper stream of the banks of the pallow runned the blue religer."

PHILADELPHIA, May 12.—Last Sunday, during my walk, your correspondent saw the yellow-rumped, the blue yellow-back, the black-throated blue, the black-throated green, the magnolia, and the chestnut-sided warblers. As I expected I heard the note of the hermit thrush, and the bobolink in his surveit the blue blue warbles. unmistakable livery was seen without his more sombre dressed wife,—Homo.

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.—The thirty-first meeting of the association will be held at Montreal, Canada, commencing at 10 o'clock, A. M., on Wodnesday August 23, 1882; under the presidency of J. W. Dawson, LL.D., F. R. S., Principal of MeGill University, Montreal. A large local committee has been formed and through its several sub-committees is actively engaged in perfecting the local arrangements for the meeting, which will soon be announced by special circular. It is only necessary to state here that the members of the committee are desirous of doing everything in their power to promote the objects of the association, and that their circular will contain information relating to the local arrangements, hotels and boarding-houses, and the special rates of transportation; also a general programme for the week. Special invitations have been sent by the local committee to distinguished scientists abroad, and it is believed that several will be present. The headquarters will be at the Windsor. The offices of the local committee and of the permanent secretary will be at the Windsor. The offices of the local committees and of the permanent secretary will be at the Windsor. The offices of the local committees will be designated on the programme for Wednesday. Members expecting to attend the meeting are particularly requested to notify the local scertary at the earliest moment possible. At the Boston meeting several changes in the constitution were proposed which were adopted at Cincinnati. As a result of these changes the scope of the association has been

extended, and the sections have been entirely reorganized, so that there are now nine sections of equal standing, each presided over by a vice-president, and having its own secretary and sectional committee. The new arrangement of the sections is as follows: Sec. A.—Mathematics and Astronomy. Sec. B.—Plysics. Sec. C.—Chemistry, including its applications to Agriculture and the Arts. Sec. D.—Mechanical Science. Sec. E.—Geology and Geography. Sec. F.—Biology. Sec. G.—Histology and Microscopy. Sec. H.—Economic Science and Statistics. All communications relating to the local arrangements for the meeting must be addressed to one of the honorary local secretaries at the rooms of the Natural History Society, University street, Montreal. All matters relating to membership and to the presentation of papers will be attended to by the permanent secretary. The address of the permanent secretary, Mr. F. W. Putnam, will be Salem, Mass., until August 17; after that time and until the meeting has adjourned, his address will be Windsor Hotel, Montreal, Canada. The following are the officers of the Montreal meeting: President, J. W. Dawson, of Montreal; Vice-Presidents—A. Mathematics and Astronomy, Wm. Harkness, of Washington; B. Physics, T. C. Mendenhall, of Columbus; C. Chemistry, H. C. Bolton, of Hartford; D. Mechanical Science, W. P. Trowbridge, of New Haven; E. Geology and Geography, E. T. Cox, of San Francisco; F. Biology, W. H. Dall, of Washington; G. Histology and Microsopy, A. H. Tuttle, of Columbus; H. Authropology, Daniel Wilson, of Toronto; I. Economic Science, and Statistics, E. B. Elliott, of Washington. Permanent Secretary, J. R. Eastman, of Cambridge; General Secretary, Wm. Saunders, of London, Ontario; Assistant-General Secretary, J. R. Eastman, of Cambridge; General Secretary, J. R. Eastman, of Cambridge; General Secretary, J. R. Eastman, of Physics, Charles B. Hastings, of Baltimore, C. Chemistry, Alfred Springer, of Cincinnati; D. Mechanical Science, Charles B. Dudley, of Altoona; E. Geology and Geography, C.

Modes by which Scale-insects spread from tree to tree.—I watched to-day a colony of Hyperaspidius coccidivorus Ashmead which has for two months or more been increasing on the trunk of a tall seedling orange tree. The main trunk of the tree is covered densely with Chaff scale, [Parlatoria Pergnatii Comstock.—Ep.] and upon it the larvæ and imagos of the beetle are feeding. The greater number are now in imago. I found but one pupa although larvæ are still abundant. The beetles, both larvæ and imago, feed upon the Coccids in all their stages. They never bite through or tear off the scale, but seem to push their heads under, between the bark and the scale. Larvæ of the scale by the Coccinellid. Although this is not properly a breeding time of the scale, there are considerable numbers of scale larvæ wandering about, and I noticed again and again that they frequently mount upon the bodies of the Coccinellids while the latter are feeding and without attracting the attention of the beetle. It even seems to me that they are attracted by the smooth and shining surface of the Hypernapidius' elytra, as I sometimes saw three or four of the scale larvæ together upon the back of a single individual of this extremely small beetle. As several large Coccinellids Chilocorus bivulnerus, et al., are extremely common in all our groves, and all feed more or less upon Coccide, it does not seem surprising that the scale should spread from tree to tree. Another method of transportation has recently occurred to me. The sarries or butcher bird is very fond of selecting orange thorns as places to store insects. The bird is extremely common, and of course preferably selecting orange tees that have long straggling branches, in fact, pretree. Another method of transportation has recently occurred to me. The shrike or butcher bird is very fond of selecting orange thorns as places to store insects. The bird is extremely common, and of course preferably selects orange trees that have long straggling branches, in fact, precisely those that are most thickly infested with Long scale. I know of one grove, much infested with scale and where at any time may be collected a double handful of dead or living insects (Orthoptera and common beetles like Phanaus) from the orange thorns upon which they have been impaled. The thorns on infected branches are always thickly coated with long scale, and in impaling a hard shelled insect like Phanaus many scales are torn off, and both scales and their eggs adhere to the insect. The shrike sometimes transfers the insects it has impaled upon one tree to a thorn upon another tree, or after making a meal of its prey which it takes off of a thorn, the bird flies off and wipes its bill on the next tree. In this way as well as upon its feet, the bird must spread scales from tree to tree.—II. G. Hubbard, in American Naturalist.

IFA New Yocatan Bird.—At a recent meeting of the New York Academy of Sciences, Mr. Geo. A. Lawrence described a new swift from Yucatan, under the name Chetura gaumeri. This bird was collected by by Mr. Geo. F. Gaumer, in honor of whom it has been named Chautura gaumeri, measures 4½ inches in length, the wing is 4½ inches and the tail 1½ inches, the spines being wanting. Its color above is smoky brownish black, the rump and tail coverts, however, being dark ash, each feather narrowly bordered at the end with gray. The throat is whitish gray, breast and upper part of abdomen dark smoky ash, lower part of abdomen and under tail coverts darker, wings black, under wing coverts and inner margins of quills dark ashy brown; bill and feet black. From this description it will appear that this species differs from Chatura vauxi in the darker coloration of its upper and under plumage, the throat, however, being much alike in both, and in being smaller, with shorter wings and tail. It is darker above than C. pelasyica, but lighter below. It appears that in the past, specimens of this bird have been collected, but that they have been confounded with C. vauxi. Mr. Lawrence's extremely interesting papers upon the birds of the Lesser Antilles, based upon the collections of Mr. Ober, have been alluded to in Forest and Stream as they have appeared.

appeared.

Odd Nesting Plages.—Sing Sing, May 12, 1882.—Editor Forest and Stream: In the spring of 1880, a pair of bank swallows (Cotyle riparia) took possession of a space under an iron pipe that protruded from the side of a stone building, and there raised a brood. In June, 1881, I found the nest of the black-billed cuckoo (Coccysus srythrophthalmus) placed on a beam under a bridge, with a swift-running stream within three feet of it. The nest contained young ones. On May 7, 1882, I found a robin's (Trutus migratorius) nest placed on the ground under the roots of a large tree. The nest contained four eggs. On the same day I found a nest of the song sparrow (Melospiza melodic) placed in a hole in an old apple tree. The nest contained three eggs.—Cal. Culver. [1s it quite certain that the birds referred to as Cotile riparia were really of that species? The locality of nest would seem to point rather to Stelgidopteryx].

point rather to Stelgidopteryze].

Killed by the Wires.—Summit Station, Ohio, May 8.—
Editor Fovest and Stream: Mrs. Jennie Brock found a bird
last week that had been stunned by striking a telegraph wire.
It is about as large again as a quail and is about the same
shape. Its body is black, under part of tail and points of
wing feathers are white. Point of the bill is a pale green,
rest of bill blood red. The red runs to top of its head, and
is about half an inch wide, legs about eight inches long,
green, except about one inch above the knees, which is blood
red. Its feet look as if it belongs to the waders; toes about
two inches long. Can you tell me from above description
what kind of a bird it is? No one about here that has seen
it, ever saw such a bird.—F. M. L. [The specimen is no
doubt a Florida gallinule (Gallinula galeata), a bird belonging to the rail family, and whose distribution is rather
southern.]

Georgerown, Mass., May 9, 1882.—Editor Forest and Stream: The following is a description of bird which I found dead under the telegraph wire, and would like to know what it is. From its head, around its eyes, clear to the end of its tail, it is a light olive green; the under side of its neck and its breast is mottled white and black; the under side of its wings and tail are brown; on the top of its head is a spot as large as a silver three-cent piece, that is the color of old gold; its bill is rather small in circumference, but is about half an inch in length and very sharp. I enclose some of the feathers that came from its back, and should have sent the bird, only it was too far gone. The bird is about the size of a common sparrow.—E. H. M.—[Your bird is the golden-crowned thrush (Siurus auricapillus). Although commonly spoken of as a thrush, from its superficial resemblance to many species of the Turdidæ, it is really a warbler. It breeds commonly in New England.]

Anmal Analysis.—We have received from the publishers, Jansen, McClurg & Co., Chicago, a useful set of blanks for the student of zoology. The title is, "Animal Analysis for use in schools and colleges, following the analytical method in the study of Zoology, and especially adapted to accompany Jordan's Manual of the Vertebrates. By B. W. Evermann." It is mainly of use to record specimens of either mammals, birds, reptiles (snakes only), and fishes, Other puges are not filled out and can be used for whatever is required. Taking a page devoted to fishes we find headings as follows: class, family, name, genus, species, common amme, locality. Then follow lines for dimensions, shape, mouth, maxillary, premaxillary, fir rays, teeth, viscera, etc. The book is about eight by ten inches, sixty pages with index, and cloth cover. The price is seventy-live cents and in our opinion it is of value to the student.

in our opinion it is of value to the soutent.

Captive Game Birds.—Newark, May 13, 1882.—Editor Forest and Stream: Last fall, while hunting, I chanced to wing-tip a hen ruffed grouse, which, after a tedious and dangerous race, I secured and brought home in good condition. A friend having had a similar experience with a cock quail which he then had in a cage, I let him have the grouse for company. This did not meet the approval of Mrs. G., as she went for that quail and plucked his feathers well. They were then separated by a partition, and this spring a more commodious cage was made out doors, and both were placed therein, since which time they have lived harmoniously. The grouse soon tamed, and would take cranborries from the hand greedliy in a few days. Within the past two weeks the grouse has laid several eggs, but disdains anything like a nest.—J. R. B. the past two weeks the grouse has lidisdains unything like a nest.—J. R. B.

Millerstown, Pa.—A gray eagle was shot near this place on last Friday (April 28) by Mr. S. S. Bell. It measured six feet ten inches, with wings expanded, from tip to tip of wing, and weighed eight pounds. Mr. Bell shot it with a .32 cal. rifle at the distance of about 100 yards, hitting it in the neck. It was quite a curosity in those parts.—Observed.

THE CLIPPER SHOOTING CLUB, of Burlington, Iowa, publish the game laws or that State in convenient shape, and offer a liberal reward for all convictions under the same, The club was organized in May, 1878, and numbers among its members many of the best citizens of the county of Des Moines. It has had a good influence in making the game laws respected, and we look for further work of the kind by it. The officers are: T. B. Swygard, President; A. J. Winders, Vice-President; T. Rundorff, Treasurer, and T. L. Pilger, Secretary.

Game Bag and Gun.

GOSSIP FROM A '49-ER.

GOSSIP FROM A '49-ER.

THE paper of Mr. W. W. Colburn, in No. 11, contains many things that sportsmen should heed, practice and impress upon others outside of the fraternity. One particularly, the importance of game protection, observance of game laws, through the absolute indorsement of "public opinion." A very little persistent effort will mould public opinion. Which is certainly the only power which will enforce legislation. Not to appear egotistical, for I think others could give the same experience, but to induce many others to accomplish like results, I will illustrate my own. Fourteen years ago I returned and settled down in the homestead of my fathers, being at that time the only owner of bird dogs, and the only one who made pretence to shoot on wing in this vicinity. The winter of 1856 and 1807 had utterly destroyed the quail. My dogs were uscless, except for companionship and grouse shooting.

Being anxiously desirous for the restoration of quail, I made inquiry year after year of farmers, if they had observed the return of quail. Without exception, they all lamented the absence of cheerful Bob White. All became interested, yet few if any had ever shot a quail. In the village stores where townsmen "most do congregate," I talked of quail, game protection, and game haws, to a class of gumers who shot in any season, at anything wild, that had fur, feather or hair or, and had never given a thought to statute of legislature or law of nature; and unconcernedly shot song, insectivorous and game birds at any opportunity. The digest of the game law found a place in the county papers. It was cut out or copies posted in stores and post-offices. They attracted attention.

I am happy to say that in a few years, and by the time the quail became rehabilitated, there was no shooting of song and insectivorous birds, (the milliner's demands are not known here) and game was shot only in season, except by "Nessmuk's" "pariah, whome everybody is down on," such as also shoots the farmer's stray fowls, and who is as difficu

never been refused, and no honorable man need be.

The grouse mystery suggests a subject I cannot skip over, and I must say to "Nessmuk" that I cannot agree with him on some ideas. We do not have deer hunting, nor any game upon which rifle shooting would afford sport, not the dense woods even; only occasional thick brush or patches of old field pine; on the contrary, open woods, with a denser growth along water ways and marsh, pretty thickly grown with second growth upon stony hill tops or ridges, near to wheat stubble, corn and buckwheat fields; all of which a few years since were used by both grouse and quali—a combination "devoully to be wished for" again. Admitting that a good shot does not drop "three out of five grouse," a good observer, an ardent sportsman and a practiced dog, will follow the straight line flight of the wounded or dead bird, and find it just the same as quali are often found.

I do not remember a single instance, when seeing "a little

a good shot does not drop "three out of five grouse," a good observer, an ardent sportsman and a practiced dog, will follow the straight line flight of the wounded or dead bird, and find it just the same as quail are often found.

I do not remember a single instance, when seeing "a little patch of downy, mist color feathers floating in the air," that I failed to secure a finally dead grouse. That was an old wing-shot's advice to me years ago, and I recommend it to all who, like me, will shoot grouse on the wing; for with all due deference to "Nessmuk," whose knightly courtesy to those visitors who "had come 300 miles" is not the least admirable of his many direct and indirect instructions, I must continue to shoot grouse on the wing if they ever become plenty again. For without any of the causes cumerated by "Nessmuk," the grouse almost disappeared before a breech-loader of any gauge "hombarded" in this vicinity. So "10-bores" didn't destroy them by "murder most foul." Certainly the "bellow of 10-bores" cannot compare to the whistle of the locomotives, nor "two men and a dog" be equal to the "racket" of the trains on the Pennsylvania Central Railroad. Yet up to their sudden decrease in 1877 I think no finer grouse shooting should have been wished for than could be had within fifty to 500 yards of that road, as Mr. David Brooks can vouch for; and old Bizmark would testify if there had been no modern Othello. I have no solution of the mystery. I did accept the tick, as during the season of decrease if found as many dead birds as living ones; and neither ground, tree, or wing shots killed or wounded them. Not grouse, but deer, wounded deer, "hid away to die a miscrable death." This is, and has been my torment. During the mouth of November, 1836, on the bottoms of the Elk Horn, Nebraska, I sadly regret that I had the opportunity to plant buckshot, loose and Ely's cartridges into more deer than I care to confess at distances of five to sixty yards standing, walking, running, and from horseback. Yet all save one disa

and the birtis not pass one cases.

"En Garde" asks, "What is the direct cause of the blowing off of the muzzles or bulging of choke-bore guns?" In addition to the causes you mention, Mr. James, of Baltimore, told me that large-sized chilled shot would produce such results, and advised me to use soft shot, which I did on the Broadwater last fall, and thereby discovered what produced measles, in my gun, at least, which I was unable to remove

by the most persistent cleaning, until upon my return home, I used the wire scratch brush, which removed a great deal of lead in addition to amount previously removed. So restored the gun has remained smooth, as bright inside as when it came to me new. The outside, lock, stock and barrels, before going out were well covered with a mixture of tallow, neatsfoot oil and parafilne, which preserved it from rust. It was boot grease, and is just the article "Boots" in same column asks for. I guessed at proportions. Juniata.

SKETCHES FROM THE AIR.

SKETCHES FROM THE AIR.

VEARS ago when my attention was first directed to the unerring certainty with which old "Charlie H." could tell whether the fowl were "hit hard" or rather "hit bad" as he expressed it (almost before lowering his gun) it seemed to me little short of the marvelous. Close attention to the subject will improve one in this respect, and though few I have met could compare with "Charlie," there are many who can tell with moderate certainty, by the action of the bird at the moment the charge cuts it, whether it is a killing shot, or one which requires a second barrel to secure. Some fowl, when shot, will start in a sudden, convulsive manner, others appear to shudder as it were, others again seem to shrink up (this is almost a certain sign of death, sharp and sudden). The variety of these signs, however, is endless, and although a certain sameness pervades them all, a comparison of a fow individual cases will be found interesting. Let us soe.

No use firing again!! he is filled full, I saw him shrink all up as the charge struck him. See him scale off, with his wings set. There!!! down he goes, how the water flies as he strikes, two hundred yards at least, before he gave it up.

Good boy!!! as neatly done as though you had been at it all your life. Nearly lost him, didn't you? twisted like a flash and came right in over. You almost tipped backwards before you covered him. "He came rotten" though, as old Billy used to say; lies as quiet as a mouse about two rods back of us on the meadow.

This old canvas-back is coming up tame as a chicken, take your time, and you can drop him right among the stools. That's it!! doubled all up!! Did you hear the charge slap into him? sounded as though it had struck a wet rag. How he humped his back when he felt it. Head back, wings thrown forward, and feet down, told as plainly as words, that he had enough of it.

Bang!! Ha!! ha!! ha!! see him kick, yes, stung him certainly, but it is no use wasting powder and lead at such distances. He was a leetle too near off!! and beside, you might strain your gun shooting so far. An old chap I used to gun with, told me that he hated to shoot a duck high up, 'cause if he didn't strain the gun, the bird would be "spiled" falling so far.

Close!! Close!! Right over us, he will be back again, although a trifle suspicious; here he comes!! take him before the wind, he wont stop this time, unless you make him. Beautiful!! turned him over, and over, and over. They always twirl in that way, when killed outright, coming before the wind. Here, let me see him, that gun of yours throws close and hard; look at him, peppered!! wing and legs broken, Choke boring is a big thing. I should judge that

bird was forty yards and you must have pulled a long way ahead of him, as he was going like a streak before the breeze. Cannot do it, in that fashion, every time.

Do these sketches take you back, to the bright autumn

Do these sketches take you back, to the bright autumn days?

Do you remember how you stopped this fellow, as he flashed by with the breeze behind him, or the one who doubled and came right over you, that you broke all up, without fairly sighting? Do you not hear his dull thud on the meadow as he strikes? If the above short descriptions, bring memories of "good times gone" but to return, I sincerely trust for all of us, they will have carried out the intentions of

AN AERIAL CHASE.

AN AERIAL CHASE.

W RITERS have delighted to tell us in prose and poetry of the chase of "the antiered monarch of the waste," springing "from his heathery couch in haste," on whose brave bounds "a hundred dogs bayed deep and strong." This, however, is all on the ground, among the coverts of mountains, crags, hills, dales, and glens; but you shall be told presently of a veritable aerial chase witnessed by the writer the other day. The hundred baying dogs were winged, glossyfeathered black flends, and their quarry an "antiered monarch" of the air.

day. The hundred baying dogs were winged, glossy-feathered black fiends, and their quarry an "antlered monarch" of the air.

On the morning of the last Saturday in April the sun came out clear from behind clouds which had all the previous night poured down the spring rains, rinsing the sky's blue curtains of all the foggy stains of earlier April.

Such days make us look upward; and as I thither cast my eye, the high summit and green pastures of the grand old mountain, at whose foot the little hamlet of my home nestles, gave me another hint of the standing invitation, so plainly hung on its high walls could be seen the freshly touched landscape pictures, the fringed sugar orchards, high up from among which sprang the infant floods already conscious of their might, as they tumbled over the crags unhurt, and hurried on to become resistless giants.

A horseback climb up the winding path soon found me there, stretched on the sward with the light, unerring "Manton" by my side.

Since I have run off into this reverie it would be a little ridiculous to tell you the practical object of the hunt. You must go through the sub-process of guessing what kind of gamy, edible little animals this time of year inhabit sugar orchards. But still the picture would remain uninjured had you been there and seen them scamper among the delicate lace on these lithe trees, had you seen them dart every time the shadow of the old raven, who was ill-naturedly training her youth to fly, would flit over them. They couldn't be blamed either, for those black demons would startte "the old scratch."

After a due amount of sport the keen crack of a squirrer ride near by decided me on going to hunt up its owner, who was soon discovered. You ought to have seen that little fel-

scratch."

After a due amount of sport the keen crack of a squirrel rifle near by decided me on going to hunt up its owner, who was soon discovered. You ought to have seen that little fellow! A mountain lad of perhaps fourteen, clad in brown homespun, shirt sleeves, one suspender.

"What's up, bud?" said I.

"Up! look yander on that lim—I that it was an owl; but cussed if I don't believe it's witch. I've shot and shot at it, with a rest and off-hand, and it never done anything but wink its eyes. Look at the holes in its feathers the bullets made!" said he, excitedly.

And he was excitedly.

And he was excited. A bunch of yellow hair had crept through the hole in the top of his hat and stood stiff and straight as bristles; and his eyes! The boy had met up with a stupid young owl of the great horned species, which sat on a limb near the hollow in the tree where it was reared. Sure enough the bullets had ploughed furrows through its profusion of ill-placed, dry feathers.

It is actually astonishing that such a poor and slight frame as these young birds have can carry such a huge dress of feathers. At this time and age they are but little heavier than a whippoorwill, and the boy had a target like the duelist whose antagonist were a loose gown—it is hard to tell where to put the bullet.

"Mister, I saw you just now break that gun in the middle; what sort of a one is it?" said the boy.

"Shotgun." I responded.

"Hoopee! well, splatter that dovil with it," said he with a vim.

Just at that time a young squirrel scampered with a dart

"Shotgun," I responded.
"Hoopee! well, splatter that dovil with it," said he with a vim.
Just at that time a young squirrel scampered with a dart on a neighboring tree and I "lifted him," and the unusual explosion scemed to have aroused the owl's slumbers and off it flapped. Before many movements it had a wing tip from my other barrel. This seemed for the first time to have broken the spell on the boy, and he dashed for his proy like a streak. The owl, on its back, received him with upturned talons and such snapping of his beak and eye blinking. I had, in the battle, to choke the owl loose from the boy.
At the discharge of my gun two other owls flew from the hollow tree, each taking opposite directions for thick woods far over the flelds and ridges. As if by magic at least twenty-five crows arose and began a sharp attack on the fugitives. Around, over, under and above their victims did these black hounds squawk their flendish hal has! The owls became demoralized. They tumbled about against the blue sky; and buffeted the wind awkwardly with their great wings; rolling themselves up like bundles of wool or feathers. Now one of his fleet pursuers would glide away above an owl, and with a taunting, insulting haver-a-k swoop down upon the object of his hate like an arrow, and beat him with his wings. One at a time would strike. Around in circles and through, back and across would they go. The owl lit far away, frightened and exhausted. Still on his perch did these relentless bounds bay him. The onset became so fierce that he started again on the perilous flight for the citadel of his birth. Poor, awkward, slow thing! Then his pursuers close in and all roll up a solid black ball. Hear the deafening ha har-a-k! On they come closs up—and the crows, otherwise such wary birds, seem heedless of human presence. Shall I shoot? Too far, No. 8's too light artillery to play in this battle. Right up to the owl's home they fly; and in he goes and enseonces himself, and as quickly thrustout his great head. Ah' the wicked bang of t

MAJOR JOSEPH VERITY.

SOME OF HIS SPORTING ADVENTURES, AS MODESTLY SET FORTH BY HIS OWN HAND.

CHAP. I.

HAVE often been importuned by my friends, of whom I may say that, for some reason, they are neither few nor untilled, there being among them oven presidents of republics, to say nothing of presidents of railroads and banks nor untitled, there being among them even presidents of republies, to say nothing of presidents of railroads and banks and other rich corporations; generals, judges, railroad conductors, botel clerks, and I hardly know what magnates I might not name—by them I have been importuned to write out some of the events of my life which they are good enough to consider worthy of being recorded. So far a natural, inborn diffidence has prevented my making any record of the strange things which I have seen, and perhaps borne a part in; and, indeed, rarely have I ventured to speak of them except to my most intimate friends, of whom there are not more than a thousand or so. To blow the trumpet of one's own fame may be politic, but I have always felt the reluctance by which the truly modest mind is ever restrained from an indulgence in such a performance. But of late, being withheld by a painful accident from the active pursuits which have always been my delight, and have, I doubt not, preserved the vigor of my youth till my years exceed the number allotted to man, I have been impelled, mostly by a desire to while away the time, which have; so heavily with the invalid, to write down some of my experiences. To the thousands with whom I am acquainted it is quite unnecessary for me to say that in these papers it will be my constant endeavor to keep within those exact bounds of truth which the true sportsman and angler never goes beyond; and the few who do not know me personally will find estificient internal true sportsman and angler never goes beyond; and the few who do not know me personally will find sufficient internal evidence of the truthfulness of the tales of an old hunter in

who do not know me personally will find sufficient internal evidence of the truthfulness of the tales of an old hunter in this simple narration.

It may be well to say here that the accident which has for a time crippled me happened in this wise: A panther having ravaged many sheepfolds in my neighborhood, and by way of tidbits carried off two or three fut children. I was beset by the bereft sheep-owners and parents to go in pursuit of him. With little persuasion, I consented, and having pursued him for two days, came up with my dogs just as they were treeing him. He, being greatly exhausted, was climbing slowly up the tree as I came to it, the tip of his tail being just within reach of my utmost stretch. Very rashly—as it now seems to me—I caught hold of this and gave a tremendous pull, hoping to bring him down and to see the dogs have some sport with him. But, as it happened, he had such fast hold of the tree with his claws, and I pulled so suddenly and vigorously, that his tail was pulled out, and with it came his spinal marrow, the loss of which instantly paralyzed him and brought him down on top of me so forcibly that the breath was quite knocked out of my body and almost all my bones, if not broken, were cracked and bent. I was taken up for dead, but disappointed everyone, and an now able to

breain was quite Enocked out of my body and almost all my bones, if not broken, were cracked and bent. I was taken up for dead, but disappointed everyone, and am now able to use my pen and play a little upon my violin, though with a very short bow.

A geneological history of my family might be interesting to some, but it is enough to say that we are descended in a direct line from Adam, and that we are under no obligations to Neah for the use of his little ark, having hada yacht of our own during the moist season which gave that person his notoriety. In that excursion my ancestors got some ducking and fished a little between showers for sharks and whales and such fry, and I doubt not that from those ancient fowlers and cruisers I inherit my love of shooting and fishing. This plant of many centuries blossomed at last in me, born of rich, but, in truth, I am bound with sorrow to say, dishoused parents, for of their fifteen children they bestowed upon me the largest share by far of talents, strength and good looks, as well as my full portion of money and land.

It is unnecessary to the purpose of this paper to go into the contractive details of the creative for well the exercises of the contractive details of the creative for well the contractive details of the creative for well the contractive details of the creative for well the creative for the creative of the creative for the creative for the creative of the creat

upon me the largest share by far of taients, strength and good looks, as well as my full portion of money and land. It is unnecessary to the purpose of this paper to go into lengthy details of the events of my childhood. Suffice it to say that my love of sport early became apparent, and with that love was developed a talent for sport, for I cannot but esteem as such that gift which makes some men prominent amongtheir fellows in the sports of the field and the waters. My earliest recollections are of shooting house-files on the wing with a popgun, and next of catching minnows with a pin-hook having a peculiar bend of my own invention. When I was about ten years old my father gave me a bow and arrows, and in a few weeks I became so expert an archer that I could shoot an arrow upward and split it with another as it descended. Taking a half dozen arrows, I would shoot the first very slowly, the second swiftly enough to overtake the first and strike it in the nock, the third to strike the second in the same way, and so on, till when they fell, spent, the six arrows were lying joined together. Of course it was almost impossible for any bird within range to escape me, and I safter and a strike it in the nock are the majored by a proper men and the sum way and so on, till when they fell, spent, the six arrows were lying joined together. Of course it was almost impossible for any bird within range to escape me, and I safter and the sum and the sum way a transport to the sum and the sum way and the sum
In the same way, and so on, an when they can separ, and sarrows were lying joined together. Of course it was almost impossible for any bird within range to escape me, and I rather enjoyed having them do their worst in rapid and crooked flying. It made but little difference to me how swift or tortuous their course, and, poor birds, but little to them. But I soon outgrew this simple weapon, which of right belongs to small boys, savages and women. I was given a gun, and my delight was unbounded. There is nothing so delightful to a boy as this tube of iron which gives him the power to celebrate a perpetual Fourth of July and a sense of mastery over fire and smoke. He feels himself a miniature Jove, with thunder and lightning at his command. It is needless to say that I soon became as proficient in the use of this noble weapon as I had been in that of the primitive one which I had just abandoned. Of my boylood I will say nothing more.

CHAP. II.

When I had grown to manhood, which I did not so much by growing tall and broad, as by a distillation of the essence of manhood and its confinement within a small compass (I nave even noted that giants amount to nothing but to fill story books and side shows, and that the so-called little men always come out ahead, as witness Goliati, the Weich, Cornish and other English giants, the more recent O'Baldwin, to say nothing of him of Cardiff, on the one part, and their slightly built opponents and rivals, David, Jack, Toin Thumb, Commodore Nutt, etc., on the other), I found the guns in use, even the most perfect, not coming up to my requirements. Here my talent for invention came in play, and I contrived a gun with a very long barrel, at certain points along which as the ball or shot were expelled, their speed was accelerated by relays, so to speak, of powder ignited just behind them, by a peculiar and very ingenious device. It more than exceeded my highest expectations. It would kill game as far away as I could see it, and it frequently happened in hot weather that a bird killed by it would be entirely spoiled and fly-blown before I could get to it to pick it up. After a time I learned to obviate this by putting some salt in the charges of shot, which would preserve the game till I could secure it. I also became the owner of a wonderful retriever,

who would go with such speed that his hair would fly off him and fill the air behind him with it like a streak of red mint (for red was his color), by which it was ensy to follow him, and with him I seldom lost a bird. Yes, he would bring in his birds with such velocity that they would often be quite deduced of their feathers, and it would puzzle me to tell what I had killed. I once fired a ball from this gun, and standing perfectly still for some minutes in the place from which I had fired, the spent ball struck me smartly in the calf of the leg. How it could have made the circuit of the world without deviating from its course, or striking some object which would stop it, is something which I could never account for. Its prodigious range made it dangerous, and another objection to it was the rapid succession of recoils, which was like the hammering of a gigantic woodpecker. After having shot through the houses of two or three villages, fortunately without killing anyone, and having my shoulder pounded to a black and blue jelly time and again, I abandoned its use, though I keep the gun as a currosity. Some years ago, as a special favor, I allowed three of my friends who called on me to fire it with blank charges. One was a lightning-rod man, another an insurance agent, and the other a book agent. They were all affable fellows, and seemed to have a great regard for me, but so little did they appreciate the privilege I had given them, that none of them has called on me since. For all that I would not like to part with the gun.

In my younger days I had a hunting companion who had who would go with such speed that his hair would fly off

In my younger days I had a hunting companion who had but one eye, but with that, according to his accounts, he had seen more than is vouchsafed to ordinary mortals who have two. Indeed, I sometimes had doubt of his veracity, but never was quite satisfied that his statements were well founded. Had I been, I would have done with him at once, for it has ever been my rule to keep aloof from those who have not the strictest regard for the truth. He was a keen sportsman, and we had great sport together, especially with burrowing animals, such as woodchucks and foxes. When we had found an inhabited burrow, or our dogs had driven animals to earth, he being almost as strong as I, the two of us, would lay hold of the mouth of the hole, pull it forth and, turning it inside out, let our dogs kill the contents, which would be sometimes as many as a half-dozen foxes. In this way we often got muskrats along the banks of streams, and once a fine otter, which my little fox-terrier shook completely out of its skin, so that we were saved the trouble of using a knife to save our peltry.

My friend had spent some years in the far West, and I remember his telling among other strange things seen there, of m. In my younger days I had a hunting companion who had

My Friend has spent some years in the far west, and I remember his telling among other strange things seen there, of a quail which had an eye at the roots of the tail. A bevy of them would squat in a circle with their tails pointing outward, and when come upon by dog or sportsman, would fly directly upward into the sky and quite out of sight. It was a big continued that they were retired for expensively all the them. directly upward into the sky and quite out of sight. It was his opinion that they were natives of another planet, and had been brought to ours by some freak of the elements, and as I have found no mention of such a bird in the works of any of our ornithologists, I am inclined to think his theory correct. My friend went back to the West, finding the East too tame for him, and became one of the Jacks or Bills who have of late years been so popular with the readers of fractional currency fiction. Remembering his peculiar fondness for malt liquors, I think he must be the Bruin Bill of whom we read

FABLES AND FABULISTS.

FABLES AND FABULISTS.

WHO can solve the mystery of the following problem. Given a boy just strong enough to handle a gun, or a man of full strength. Suppose the boy to be a direct descendent of George Washington, and endowed through inheritance with the conviction that the truth must be told under every circumstance, whatever may be the consequence; or suppose the man to be distinguished for probity in all his business engagements. Let this boy or man go out hunting or fishing, and he will return and tell a string of lies about the incidents of his trip, the beautiful and difficult shots he made, the amount of game he bagged, the number shots he made, the amount of game he bagged, the number and size of the fish he caught, that would shame the veriest mendicant, and prove the proffer of the Baron's hat from Munchausen, were he present, to the sporting romancer, who could "see" the yarns which made the Baron's reputation, and "go him one better."

Why is this? Can it be possible that the pure air of

cound "see the yarms which made the Baron's reputation, and "go him one better."

Why is this? Can it be possible that the pure air of heaven excites the imagination so acutely that a sportsman's dreams become to him realities? Does communion with nature, the sight of green hills and blooming meadows, the inspection of the immensity of nature, so callarge the fancy that we unconsciously draw upon it to embellish our experiences? Will not some of your readers analyze the anomaly and enrich the realms of philosophy with its solution?

Every one who has tonsted his feet before a camp fire, can testify to the mental aberrations of his friends to whom he has listened on such occasions.

My old friend L., for instance, who is learned in the fictions of the law, and whose general reputation for truth and veracity none can gainsay, when he narrates to eager cars the incidents of his sporting life, presumes upon a credulity in his listeners which few possess, and embellishes his tale with fancies, which, though very pleasant to listen to, are very hard to believe.

his listeners which few possess, and embellishes his tale with fancies, which, though very pleasant to listen to, are very hard to believe.

A pointer dog, which he owned a few years ago—I think he called him Sport—is a fruitful theme for fancy to him. He tells, with a very sober face, how on one occasion he was out with a party after chickens. Dogs and men were all stowed away in a lumber wagon, for they had several miles to go to reach the hunting grounds; and as they were driving along, as unconscious of game in their vicinity as a noscless statue would be, old Sport stiffened into a point without getting out of the wagon. L. did not care to drag out the guns to bother about a single chicken, which he thought Sport had scented, so the party drove on. But Sport evidenced his disgust at the want of nose the party displayed by continuing his point until the party had proceeded rully three miles, when, judging from the actions of the dog that the country must be full of game, our friends stopped the wagon, pulled out their guns and prepared to bag the chickens the old dog was pointing. Sport was urged from the wagon, still holding his point, and on, and on and on wrat the expectant group of hunters with nervous fingers on trigger, thinking every moment the covey might rise, until the sagacious brute had led them backward three miles, over the country they land just driven over, to the exact point where Sport had first stiffened, and there they found the birds, a full covey! Amazing intelligence in a dog, or terrific lying by a man, which would be the appropriate caption for the yarry. It takes a fertile imagination to impress a tale like this soffernly upon the mind that even its weaver after a time be-

strand in place as often as an audience can be found to ap-

strand in piace as often as an audience can be found to appear before him.

In the schoolboy's alphabet L stands for liar, and perhaps this may account for the fact that another old friend, named L for short, who in jest locates some of his stories in Tennessee, can never be relied upon to tell the truth in respect to nessee, can never be rened upon to tell the truth in respect this launting excursions. He will shoot at game or glass balls; and if he misses, will declare that he is using shells loaded three years ago, or that he is shooting No. 1 shot, which he had loaded for geese or deer in Tennessee in '49, And he will confuse the minds of his listeners with stories about his cur dog Snap that would shame a professional pre-

about his cur dog Snap that would shame a professional prevaricator.

And yet this L., in a business matter, would as soon think of lying as stealing. I account for the aberration of his mind as follows. He is a printer, and the atmosphere which arises from the leaden type is so oppressive that his mind is ordinarily confined within less than its normal limits, so that when he drops his type and takes up his gun, and seeks an atmosphere in which ozone predominates, his mind expands, his pent up fancy bursts its leaden bonds and leaps beyond the confines of the strictest truth. Bob M., A. L. Jones, Hod. Boyd, Joe D., and scores of other sportsmen with whom I have an intimate acquaintance, will adorn a hunting tale with details so invitingly real that they delight the car of a stranger, but which must be discounted alarmingly before their value is ascertained as truthful narratives.

Every sportsman will vouch for the fact that hunters and fishers will deal in romance. Cannot some one of them explain why they confine their tales of fiction within the limits of their sporting experience?

WOODCOCK SHOOTING IN COLUMBIA COUNTY.

N a bright, cool, frosty morning in the month of Octo-On a bright, cool, frosty morning in the month of October, 1881, four happy sportsmen could have been seen riding speedily along a pleasant country road in Columbia county, N. Y., behind a spanking team of bays driven by Ed., a jolly fellow, who knew how to handle the reins. The party consisted of Charley, Granville, Dr. J. (who believes it best to be ready and go than to go and not be ready), three as big-hearted, genial and as true sportsmen as ever pulled a trigger, and who know how to enjoy an autuum day in the fields with gun and dog in search of game, especially the gamy little woodcock, and in addition to these three, the writer.

Is man, good brother, ever blessed is man, good orner, over nessen With satisfaction; mind at rest, Freedom from care, from business fog, So much as when with gun and dog O'er field and marsh and wooded place He foels his game-bag grow apace?

We were accompanied by a fine brace of setters. Don, a noble, faithful companion at home, and a dog whose now seldom fails him in the field, and the Elcho-Rose Irish dog Larry. Here let me say the trip was not so pleasant for Granville as it might have been, he having had the misfortune to lose his fine little Irish setter. Tilley, who had been accidentally shot a few weeks before near the spot for which this party was heading. Arriving near the grounds at a late hour in the morning, however, the wagon was stopped, the dogs bounding out, eager for the fray, quickly followed by four anxious sportsmen. Overcoats were doffed at once, guns taken from their cases, pockets filled with shells, etc. Then, after little delay, and Ed. had been told where to meet us in a few hours, the dogs were cast off in a large, beautiful piece of adders, the sight of which on such a lovely October day makes a woodcock hunter's heart jump with delight. The first few acres were composed of old growth of alders, and proved blank except for two or three old grouse which flushed wildly and out of gunshot. After reaching better grounds an occasional cock was found during the balance of the day by the veteran Don, well backed by Larry. Most of these came to bag, affording considerable sport, until darkness coming on we made for the wagon, well pleased with the few hours spent together on our first day. After a chilly ride home, a good warm supper, dogs well fed and cared for, we were carry to bed, anticipating a full day's hunt for the morrow.

We were awakened next morning by Ed., only to meet with great disappointment, as it tained very hard all night and continued throughout the day, which was spent lounging around the hotel, inspecting Frank's fine horses, sheep, and his thoroughbred bull pup (rough-coated) and listening to the doctor's interesting ancedotes, talking dog gun, etc., till late in the evening, when all were to bed again, to be called early the next morning. We were accompanied by a fine brace of setters.

doctor's interesting anecdotes, talking dog, gun, etc., till late in the evening, when all were to bed again, to be called early the next morning.

This proved a delightful day for the sport, but we here learned with regret that professional duties would prevent the doctor from joining us on this our second day; but with a promise from him that he would join us the next day, everything was got in readiness, and a start was made for the grounds, which were reached in good season. It was a damp morning, the scent lying well, giving the dogs every opportunity to use their noses to the best advantage. As Don entered the ground, consisting of young growth of alder, interspersed with briars and tall, dry grass, bordering on a large swamp, he came to a magnificent, point, grandly backed by Larry. As soon as Don established his point, "Little 'un' began to seek for an opening among the thick alders that would afford a good shot, and the writer was not far behind in seeking an opening also. Charley here telling us to keep our eyes "peeled," stepped anxiously, but carefully, in front of Don, when suddenly two brown heauties, in full plumage, darted up through the alders with that familiar "tweedle leedle leedle" which is music to the sportsman's ears. Both were cut down in good style, which was a good send off for our second day's shoot.

To hot good Don, a splendid find,

To ho! good Don, a splendid find, With Larry staunch and trembling close behind: A brace is flushed, our star is kind; Two tufts of feathers drift adown the wind. The shells replaced—hold up! dead bird! Fetch it, good dog! Retrieved at word. The noble brace, with smoothed plume Vanish within the pocket's space

had led them backward three miles, over the country they had just driven over, to the exact point where Sport had first stiffened, and there they found the birds, a full covey! Amazing intelligence in a dog, or terrific lying by a man, which would be the appropriate caption for the ward. It takes a fertile imagination to impress a fale like this so firmly upon the mind that even its weaver after a time becomes convinced of its truth; but L. meets the emergency every time, and will exhibit the gossamer web with every

would ring out, occasionally, on the still morning air, the "Little 'un" getting his work in whenever an opportunity afforded. Thus the good time continued throughout the day till the sun was low in the west, when we started for the wagon, exceedingly well pleased with our second day's hunt. The third day we were joined by the doctor, and it was a repetition of the day before, finding birds quite plenty and making a good bag.

was a repetition of the day before, finding birds quite plenty and making a good bag.

Thus closed one of the most enjoyable hunts the writer ever experienced. Here let me say it is a mistake to suppose, as some do, that woodcock "draw" only moonlight nights. Seeing very little or no "chalk marks" on our second day, and some of the party having hunted this piece a few days before, which then proved blank, we felt perfectly satisfied that they came down the night before, during the heavy rain. Experience has taught the writer that the weather North controls the flight of woodcock, and the moon has but little if anything to do with it. Fall woodcock shooting possesses a fascination not excelled. Sportsmen probably experience more gratification in the display of a good bag than they would in the exhibition of a larger number of any of our other game birds. W. H. Pience.

A DAY IN THE WOODS ALONE.

A DAY IN THE WOODS ALONE.

One who has been accustomed to the company of good whole-souled sportsucen while hunting and has for his company men who make a day in the woods pleasant and agreeable, has a feeling of sadness take possession of him when he is placed alone with nature as his only friend and companion. It happened to the writer in this way a week ago. Having some business to attend to over in the bottom land bordering the great Father of Waters, Istarted out with gun and dog safely stowed away in my buggy. Everything was arranged the night before with a whole-souled friend who was to join me in my hunt. Arriving at his house I learn he has some urgent business to attend to which will occupy his time until it will be too late to think of his joining me on the shooting grounds for that day. So bidding him a farewell I start on my journey alone, which will take me some three hours to accomplish, as I have about fifteen miles to cover, and a portion of my road is not of the very best one could wish for, but I finally reach my destination in good shape, transact my business, and drive over to the timber bordering Bear Creek bottom.

Leaving my horse safely tied, I start with gun and shella, and head for a favorite point on a chain of lakes and sloughs some three hundred yards off. Before reaching the said point, I raise a pair of mallards some fifty yards ahead of me; it is a nice shot as they raise in comparatively open ground. In an instant my gun is at my shoulder and has covered the greenhead; he drops at the crack of my right barrel, while his mate at the crack of my left rises fully twenty-five feet in the air. As I watch her and am wondering why I should have scored such a miss, she drops dead within three feet of where the greenhead lies. Stowing the pair away in the spacious pockets of my well worn Hollabird, I resume my tramp leisurely.

As I near my stand I am successful in bagging a brace of green-wing teal, and on such a start I flatter myself with the thoughts of a large bag for the day. At l

green-wing teal, and on such a start I flatter myself with the thoughts of a large bag for the day. At last I reach my stand; and in a few minutes am nicely seated behind a hastily constructed blind ready for the birds to show them-

stand; and in a few minutes am nicely seated belinnd a hastily constructed blind ready for the birds to show themselves.

Being well supplied with shells and lunch, and having as good a point as there is within five miles of me, I have every expection of some fine sport. After waiting about an hour and getting rather lonesome, as the birds do not fly at all well, I lay my gun in front of me where I can have full command of it, and take from my pocket a memorandum book which I have kept for nearly thirteen years, and is a part of my hunting suit, and contains truthful accounts of successful and unsuccessful days of sport in the pursuit of game birds and fish, of many days that have been spent in the forest, on the stream and prairie with well-tried friends that years have scattered far and wide. Some now are many miles away, and as I now write, the warm rays of the spring sun is making the graves of others green. As I turn from page to page and note those brief jottings, my thoughts wander back to those by-gone days, and how vivid do some of those notes come to my mind, as if they were but happenngs of yesterday, although they cover so many years of time and miles of country. Here is one item that reads: "April 23d, out with B. at Willow Grove, my bag for the day twelve green wing teal, sixteen Wilson snipe, one chickenhawk. B.'s bag, five greenwings, he being taken with headache had to stop shooting. Weather warm and clear. Met German friend who was not very anxious to kill squirre because he thought 'she had eggs." How well do I remember that day. That is when I got the hawk and teal in one shot. That was the finest sight I ever saw, the teal were flying nicely; time, 5 P. M.; weather, everything one could desire for that time of year.

I was in my blind well concealed watching the movements of the hawk gracefully sailing to and fro just out of range watching his chance for an evening meal. Not twenty yards

for that time of year.

I was in my blind well concealed watching the movements of the hawk gracefully sailing to and fro just out of range watching his chance for an evening meal. Not twenty yards from me on the edge of a favorite feeding place (a shallow lake) I had placed eight or ten teal as decoys. On looking to my left I saw some three or four teal coming my way, and as they near me they poise in air ready to make my decoys a call. I do not shoot as I am anxious to see what the hawk will do. Like a flash of lightning he darts in on them, striking one as it battles for life and tries to evade the deadly talons, but it is too late, and at the stroke the poor little bird drops nearly dead. The hawk rises a few feet in air, and as he is gracefully descending after his coveted prize my gun sends forth its death missile and he drops dead beside his dying prey. It was really a beautiful picture and I shall never forget it.

During the morning of that same day I heard some half dozen shots fired in a small piece of timber I had to pass through to reach a favorite snipe ground. As I was wondering what the shooting was about, I met an old German, when the following conversation took place:

"What do you find to shoot in here?"

"Oh, vell, I see a little squairel and I dinks I shoot him."

I remarked, "You should not shoot squirrel at this time of the year," when he said, "Yaw, so I dinks; I be glad I not kill him; I expact she got eggs."

Ordinary politeness was due he old man, but it was necessary for me to leave him on short notice, and when I told B. about it at lunch that day his headache immediately left him.

As I turn my notes over leaf after leaf, my eye rests on

as I turn my notes over leaf after leaf, my eye rests on roodcock shooting on the Bay Island with H. S., of which ou have heard. Closely following comes an entry of turkey nooting on the banks of the Troublesome Creek, of a week's

camp on the creek and in the hills of Shelby county, Missouri, of the twelve fine turkeys, the large bags of quall, ruffed and pinnated grouse we captured during that week, and also of the 'coon hunt we had that one week would make quite an article of itself.

As I continue on through my jottings I see that I am within fifty yards of the spot where last fall I killed fifteen mallard ducks in twenty minutes. Had been out for the afternoon, was on my way home and at the time had five ducks; stopped with the above success, and was compelled to leave on account of darkness. I also see notes of two days among the bluewings, of which you have also heard. In summing up I notice that the past fall and winter shooting on water fowl has been by far better than any in the past thirteen years of my record. I notice my memorandum book shows signs of having been wet, and also see an entry that runs as follows: "Nov. 15, 1881. Out for the afternoon with J. S. C. on Rock Creek. Water very high, bottom lands all flooded, corn standing uncut, ducks plenty and very fat, feeding on standing corn; shot one mallard, made misstep while in water two and one-half feet deep among standing corn; fell and got nicely soaked. Left J. S. C. doing good work, and repair to farm house to dry out. Stay there until he comes up at dark, when we drive home." I look at my watch and see I have spent just one hour with my notes, and I carefully place my book in my pocket, and think I am on the ground to-day alone where I have spent so many happy days with friends that time has brought such changes to.

It makes one feel sad to be left alone with his notes of by-gone days before him, with ample time for reflection and consideration, and to think what time has done for him in

consideration, and to think what time has done for him in those years.

But the appearance of a flock of greenwing teal put all meditation to flight, as they circle past me, and as I fire both harrels at them at forty-five yards, and score a grand miss at the rapid flyers, who could say one word in reproach of one who had his mind for over one hour on the subject of his past thirteen years' experience.

As there is very little shooting on my stand, I conclude to take a hunt for some snipe, so placing in a convenient pocket some shells loaded with snipe shot, I start for a fuvorite ground where I have bagged some goodly numbers in a few hours' work.

some shells londed with snipe shot, I start for a favorite ground where I have bagged some goodly numbers in a few hours' work.

I have walked about a mile, and so far have seen no snipe, and my dog has been doing some fine work in quartering, in fact, has worked the ground so well that I knew there were no snipe about. At last he comes to a staunch point on the edge of a patch of brush; as I near him he acts rather strange, and I imagine he is pointing a crippled duck. As I reach his side there rises within a few feet of him a ruffed grouse; my gun, like a flash, is at my shoulder, but in an instant I recognize the beautiful bird, and am glad for once that I am alone, and when I look at my feet my dog is lying flat on the ground, and has just raised his head looking at me in perfect amazement, as much as to say, why don't you shoot, and all through the day seems to think, it is hardly worth while to do much work, for if I find game yon don't shoot it; the last time I found you those birds you shot them, but now you don't seem to care for them, I don't hardly see into this. Poor dog, he don't understand the meaning of close season. I find no snipe at all, it being rather early for them, so I start on my return trip to my stand, and am successful in bagging one greenwing teal. It is now time for me to return to my buggy and start homeward. As I reach the bluff road the sun is just setting behind a beautiful dark red cloud which lines the western horizon. Thus closes a rather unsuecessful day alone in the woods.

QUINCY, Ill.

A TRIP TO NOVA SCOTIA.

A TRIP TO NOVA SCOTIA.

THE cost of a trip to the best hunting grounds of this province would depend very much upon the parties themselves, and the style they wanted to do it in. However, I will try and give the outlines, by which "Constant Reader" will have some idea of the trip.

First, the best hunting ground in Nova Scotia is the Liscomb Lake country in Guysboro county. If "C. R." will look back over the Forest And Stream, in the issue of January 20th, 1881, he will find a letter written by me headed "Nova Scotia Game," which touches upon some points upon which he wants information. The best time for moose, caribou and bear hunting is in the fall; the season for moose and caribou opens September 15. It is then rather late in the season for fishing, but fair sport can be had on the lakes; and there is generally a run of sea-trout up the rivers in September. There is choice of two routes by water, one via the Cromwell Linc direct to Halifax, running, I think, fortnightly; and the other via the Nickerson Line from Bosion, via Halifax, Pictou and Chaltottelown, Prince Edward's Island. The fares by these hoats to Halifax, I think, would be about the same, say \$15; but I would prefer the Nickerson Line, as there the sportsman could land at Pictou, and would have only nine miles of railway travel, against 100 miles if he landed at Halifax, which is a consideration if he brings all his camping equipments. A license is necessary and will cost \$30. Guides will be required, rate from \$1 to \$1.50 per day; but would recommend an arrangement say \$1 per day and a bounty of \$5 for each head of large game brought to bag. This I have found to work well. Guides can be procured either at Halifax or in this locality, and should "Constant Reader" conclude to pay us a visit, if he writes to me I will endeavor to secure the services of as good men as the country affords. The game consists of moose, caribou, bear; the birds are ruffed grouse in the woods; the fish principally trout. Am not aware of and descriptive guide published.

Sensible Words.—Mr. Willis D. Maier, in his Fin and Frather, has this to say about farmers and sportsmen: "A farmer can stand a good deal, is good-natured, will afford every facility to a gentleman to obtain sport, but he cannot stand everything. He cannot run around every day or two and spend time in hunting up and mending his fences, that have been torn down for no earthly use whatever. Neither can he be expected to be continually regulating rail piles that have been scattered all over creation, for a single rabbit. Many a rod of fence, many a hay stack, and lots of fine timber have been lost to him by the carelessness of a certain class of hunters; who, without any object, save destruction, overrun farms and ruin everything in their path, thereby creating a prejudice for which the innocent must suffer. We venture to say that there is not a member of the organized clubs of this city, or any man that loves to hunt for sport, that is, or would be guilty of committing any of the above-mentioned depredations, nor counsel them, but on the other hand, would gladly assist in punishing the marauders, could they be releastified. The duty of the true sportsman is one in common with the farmer, to work for the interest of both, and wipe out these pests that bring field sports and privileges into disrepute. Treat the farmer as a gentleman and he will follow suit. Treat the farmer as a gentleman and he will follow suit. Treat the farmer as a gentleman and he will follow suit. Treat the farmer as a gentleman and he will follow suit. Treat the farmer as a gentleman and he will follow suit, treat the farmer as a gentleman and he will follow suit. Treat the farmer as a gentleman and he will follow suit, we should to respect, and sooner or later this will be done by consent or force. It stands us all in hand, the farmer and the sportsmen, to work for the common good of both; treat each other civilly, villingly and faithfully obey the laws. We should do as we wish to be done by. We should not ask more than we should be willing

RUFFED GROUSE IN MAINE.—My youth was passed in Kennebec and Franklin counties, Maine. During that time this favorite bird was very plenty in both counties. As you and your readers are aware, I now spend a portion of each autumn in those counties. From '75 to '80 I found in Kennebec county but very few ruffed grouse, but in '81 I had some days of excellent shooting of this game. During some of these years I had fine sport in Franklin county, and particularly between Smith's house at Eustis and Tim Pond, and more especially from Tim Pond to the Seven Ponds, I found "Partridges," as the natives call them, more plenty than I ever found them in either county thirty years ago. In fact they were so common and so tame it lessened the sport of shooting them. A letter just received from Kennedy Smith informs me that they have wintered unusually well and should they be fortunate in rearing their young, they will be found still more numerous the coming season. I am unable to account for these disappearances and re-appearances. Squirrels were very plenty in these forests in '76 and have been very plentful ever since. Smith also writes that he has spent much time and money improving and repairing the roads to the above mentioned ponds and also built several new cabins at both of these now favorite resorts. The open season for trout began the first of this month and a large number of sportsmen have already engaged accommodations for their enticing sport.—J. W. T. (New Britain, Conn., May, 1882.)

Cazenovia, N. Y., May 12.—The Cazenovia Gun Club held its annual meeting May 9, and the following officers were elected: Geo. C. Brown, President; Dr. J. F. Phelps, Vice-President; Will Thomas, Secretary; W. J. Dwyer, Treasurer; Dr. H. Foord, George Atwell, and H. J. Mather, Ex. Committee. The balance in the treasurer's hands was on the right side, but not so large as it might be. Dr. E. C. Bass promised a prize of mounted birds on a shield for Dwyer, Thomas and Cruttenden to shoot for, as they cannot shoot for the club badge; Will. H. Cruttenden gives a badge for the best average; Charles F. Morse 12½ pounds of powder for the next best; H. J. Mather a pair of beautiful stagnorms to the one making the poorest score; all to shoot from 18yds., Card's trap and Card's rules; ties shot off at 21yds.; shooters to be at three-quarters of the shoots to win either prize. J. W. Livingstone, formerly with Parker Bros, Conn., has rented the upper floor of M. E. Card's shop, and is to move his machinery and tools from Syracuse into it, and will soon be able to do all kinds of gun repairing. We are glad he has come, and hope he may be successful.—Hammerless.

PHILADELPHIA Notes.—May 12.—It has been raining there for the past four or five days and at the present writing the clouds are still heavy, the wind from a bad quarter of the compass and there is every prospect of a continuance of the storm. Our meadows along the Delaware River and creeks flowing into it are under water in many places owing to the heavy tides we have lately had, and altogether the past week has been a dreary one. There will be a tremendous flight of brown backs and robin snipe as soon as this rain is over, and those that are fond of spring shore bird shooting cannot but fail to find plenty of birds on the New Jersey and Long Island coast when it clears. English snipe have almost entirely gone. A few very fat and already mated birds remained the first of the week but the rain has doubtless started the lingerers northward. None nowadays remain with us to breed. Some Sora rail do, however, nest in our Delaware marshes, but they are not so numerous as formerly.—Homo.

The Control of Lord Baltherer.—Boston, May 5.—
Lord Baltimore, the fire-hang bird, arrived this morning, and I had a jolly time with him. For eleven years I have watched this glorious fellow coming. He never has come before until the blossoms of the fruit trees were open, and many a morning in May I have said to my wife, "The cherries are in full bloom. I heard Lord Baltimore just now." And sure enough, we would find on looking out that we had a snowstorm in emerald, though when we retired no amount of blossoms were to be seen. This year no sign of a blossom has appeared so far, save on a couple of apricot trees very faintly. I think we get the same birds year after year, for they will answer my call and come in to the trees nearest me without fear.—S.

St. Louis Gun Club.—St. Louis, May 9.—At an election had yesterday for officers for the St. Louis Gun Club, Jno. W. Munson was made President; L. D. Dozun, Vice President; Wm. A. Albright (re-elected), Secretary and Treasurer; D. A. Marks and J. Hopkins, members of the Board of Managers, The club appropriated seventy-five dollars to the Sedalia, Mo., State tournament.—Wm. A. Albright.

Sea and Biver Hishing.

For, though of all field sports the motive and origin is to kill for the table, and not to kill for the sake of the killing, still the sport to be derived from them lies in the excitement of pursuit and difficulty of capture-not in the number or value of the game

FRANK FORESTER. Fish and Fishing

WHERE TO GO FOR TROUT.

WHERE TO GO FOR TROUT.

THAT all angling is good, but that angling for brook trout is best of all, is, I think, the common opinion of brothers of the angle. Now, to find a well-stocked stream in these days when everybody fishes, and the easily accessible waters are fished out, is a serious question, which will be debated the coming season. One reason why the fishing trip is unsuccessful is probably that it is taken at the wrong time. The summer vacation of business men is usually in July or August, when in the Middle States the trout have left off surface feeding, and have retreated to the spring holes and deep lakes where they are hard to find, and when found afford little sport. In those regions May and June are the months for sport, the trout are in the rapids, will take the fly, and are active and vigorous. Good baskets of fish, by which I mean trout not smaller than three or four to the pound, with an occasional two-pounder, can be made in Massachusetts, also in Michigan, Wisconsin and Minnesota. No doubt in many other States; I only mention what I know from experience. Of course I do not mean in the neighborhood of cities where trout sell for a dollar a pound, or on existed lines but away from they make a trang acapte, at the property of the property and the property at the property of the pound, or on existed lines but away from them when the trange acapte, at the property of the property and the property at the property of from experience. Of course I do not meant in the neighborhood of cities where trout sell for a dollar a pound, or on railroad lines, but away from them where stage coaches still exist, and where the market fisherman does not. June is the month for fishing in Maine also, but in July sport can be had on Moosehead Lake, the upper Penobscot, the Rangeleys, the Megalloway, Munson Lakes, and others sung by a Maine neet by a Maine poet-

"Behold | how they sparkle and flash in the sun. The Mattawamkeag and the Mussungun, The kingly Penobscot, the wild Woolasto Kennebec, Kennebago, and Sebasticook,

Re kingly Fenoesce, the wine woolastook, Rennebec, Kennebec, kennebago, and Sebasticook."

and many others which terminate in "took" and "cook"—sonorous lines, if not inclodious.

The Maine wilderness is so extensive, and the lakes and rivers so numerous and interlocked, that one might travel hundreds of miles upon them, much of the way far from the abodes of man. For instance, ascend the Kennebec from Augusta to Moosehead Lake, then by a short carry to the upper Penobscot, descend this river to the head of Lake Chesuncook, thence through rapids and streams (this is a word which in Maine signifies water which connects two lakes) to Lake Chamberlain, thence through other lakes, with the names of which I will not perplex the printer, to the head waters of the St. John, the great river which forms the boundary of Maine on the north and northeast, runs mortheast and south till it enters tide water near the city of St. Johns, New Brunswick. In all this route trout abounds, and the man who entered upon it a tyro, at the close, if possessed of the proper gifts of nature, might write himself P. F. F., or Professor of Fly-Fishing. In such a trip hard work will have to be done—a walk of three or four miles across a carry, laden with oars, guns, ctc., over rocks, through mud, and under fallen trees. No weakling should attempt it. As Emerson writes:

"Look to yourselves, ye polished gentlemen:

"Look to yourselves, ye polished gentlemen! No city airs or arts pass current here; Your rank is all reversed; let men of cloth Bow to the stalwart churls in overalls; They are the doctors of the wilderness."

-The Adirondacs

One of the finest regions for trout is Lake Superior. Flyfishing begins late, say in August, but this immense body of cold water affords a breeding ground and retreat, from which the trout can never be exterminated, although they may be, and are, diminished in numbers. When I first visited the Sault St. Mary in 1841, these fish were so abundant that a basket of good size could be filled almost anywhere on either shore, and in the little streams and currents on the Canada side, one could hook a pair at almost every cast. Not so to-day. Persistent and reckless fishing has done its work. But beginning at the Sault and following the south shore of the lake many good rivers are found. The Tequamenon, the Two Heart, the Iron, the Huron, the Chocolate. Most of the rivers in this part of the peninsula flow south into Lake Michigan. Between Point Keweenan and the Apostle Islands are many fine trout streams where three and four pound fish are found. Among the islands good trout can be taken in deep water from the rocks with bait. Bayfield is a good place for the trout fisher to stop a few weeks. He can have a variety of sport close at hand. He can take the great lake trout by trolling or deep fishing, rather a heavy, sluggish tish, but strong. An Englishman, writing in the London Field, maintains that it gives more sport than the black bass., Perhaps a codish taken in thirty fathoms would give still more of that sort of sport.

West of Bayfield is a once famous river, the Bois Brulee, which was part of the old Indian thoroughfare from the lakes to the Mississippi. A friend of mine, taking this route in 1840 in a cance, found the Brulee full of large trout so that he could kill enough for a party of ten or twelve men in an hour's fishing.

On the north shore the Nepigon stands pre-eminent as per-One of the finest regions for trout is Lake Superior.

In 1840 in a case, found the British and the could kill enough for a party of ten or twelve men in an hour's fishing.

On the north shore the Nepigon stands pre-eminent as perhaps the best trout river on the continent. Fish of six pounds are common there, and a string of sixty, averaging two pounds each, has been taken by one rod in a day. But all anglers have heard of the Nepigon. Between that river and the Sault are many good streams, accessible from the Sault with a canoe and Indians. I found in 1869 one of the best of boarding houses at the Sault—very neat and comfortable, with an excellent table. Fresh whitefish from the rapids, and brook trout at every meal, and we all pronounced the whitefish to be the better of the two; also wild strawberries from the meadows, and raspberries from the woods; these, covered with rich cream, afforded a repeat not to be forgotton. August is the month for Lake Superior. So also is it for Canadian waters, which afford, methinks, even more and larger trout than those of the upper peninsula of Michigan. In the Dominion you can hardly go amiss in this pursuit.

pursuit.

In Ontario I have not fished, but in Quebec, New Brunswick and Nova Scotia, and on Prince Edward's Island, I have had fine sport. For abundance of fish the Tabusintac, which flows into the Gulf of St. Lawrence about twenty

miles north of Chatham, in New Brunswick, is pre-eminent. The Novelle, which enters the Bay of Chalheurs on its north shore, is remarkable for the size of the trout, which average over two pounds, and there seems to be no small trout in the river. They are all sea trout, while in the Tabusintac, both these and the brook trout are taken from the same pools. I am aware that naturalists deny any distinction between these two, though all anglers observe the difference in form, color, size and habits between them. On the upper waters of the Restigouche, which divides New Brunswick from the Province of Quebec, I have found brook trout so abundant in July, while fishing for salmon, as to be quite a nuisance. Sometimes, when tired of salmon fishing, which is hard work, I would take my trout rod, with a cast of three flies, and often fasten a trout to each. But no one in camp would eat them, preferring the salmon, and I returned the trout to the river. The "speckled beauties" played the same part in a salmon river that the chub do in a trout stream—intruding themselves upon the angler who was in pursuit of higher game—and receiving the same treatment. Having tried both kinds of angling. I must say that I prefer trout fishing to salmon fishing. The first is less laborious, and a three-pound trout on a seven-ounce rod gives as much sport as a twenty-pound salmon on a seventeen-foot salmon rod. That, at least, is my opinion.

pound salmon on a seventeen-foot salmon rod. That, at least, is my opinion.

There is excellent fly fishing on Prince Edward's Island for both varieties of trout. In June sea trout of three or four pounds may be taken at the river mouths in tide water, in July and August they may be found up the river in company with the brook trout. The island is a pleasant place in summer, a rich agricultural country, with good woods and comfortable hotels, where the prices are moderate. There is also considerable game in the way of snipe, woodcock and shore birds. Steamers run once a week from Boston to Charlottetown, P. E. I., and thence there are steamers to St. Johns, New Brunswick, and to Quebec.

In the interior of the Province one finds an old-time simplicity of manners, such as existed in the States fifty years ago, when railroads were not.

THE ICHTHYOPHAGI.

THE ICHTHYOPHAGI.

THE fish-cating club with the hard Greek name recently had a new revelation. A new member was elected, and he thought it would be a proper thing to "blow off" the club. To this, of course, there could be no objection, and twenty-four invited guests took return tickets for Bubylon, Long Island, as was hinted in our columns would be done a few weeks ago. Their further destination was unknown, and all they were permitted to know was that it was to be a strictly scientific scance to inquire into the alarning mortality recently observed among the ocean fishes. Every member was heavily armed with a "paper" prepared to give his views of the cause of the epidemic, and to suggest a remedy.

member was heavily armed with a "paper" prepared to give his views of the cause of the epidemic, and to suggest a remedy.

The new member met the party at Babylon, and was formally introduced to the following gentlemen: John Foord, President of the club; Barnet Phillips, Secretary; E. G. Blackford, Caterer; Howard Carroll, Head Taster; Dr. W. A. Hammond, Club Surgeon; Paul Du Chailiu, Explorer for Camping Grounds; Fred Mather, Naturalist; Hon. John H. Starin, Lecturer on Gastronomy; Hon. Robt. B. Roosevelt, Keeper of the Worcestershire Sauce; S. S. Conant, Poison Detective; Geo. Werrenrath, Musical Director; Otto Witte, Master of Transportation over the Brooklyn Bridge; Mr. Gillam, Artist of the Club; Mr. Franklin Satterthwaite, Heralt of the Morning; Mr. Drysdale, Keeper of the Time(s), and Mr. Hall, Sin-light Dispenser (not in the "Land of the Midnight-Sun," that is Du Chaillu's province). The new member's hand trembled as he took the hands of these distinguished men, and not until he was on a yacht, far out in the water of the Great South Bay, did he recover his self-possession. Then, throwing off his ulster, he showed himself in the uniform of an Admiral, and enjoined complete obedience to the military discipline which ruled within the limits of his kingdom, whither the scientists were bound.

After leagues of water had been passed land hove in sight and on approaching it armed men were seen passing up and down, and when within hailing distance a cannon shot from the shore brought the yacht to and the countersign was given and the party landed. Arms were presented and a gang of Custom House officers seized the satchel which each man carried, as well as a kettle of whitebait from the caterer, and declared it contraband. The Port-physician felt the pulses of the crowd while the coroner looked to see if any dead were left in the yacht. A man with "Deputy Sheriff" on his hat eyed Hon. John H. Starin in a manner that made our Congressman uncomfortable. The Sheriff apparently satisfied himself that Mr. Starin was

sort of thing.

When the dinner ended, about midnight, the party ad-

When the dinner ended, about midnight, the party adjourned to the armory and some speeches were made on the alarming mortality among the Lopholattit, and on the decrease of Ostrea virginiana, in the South Bay. The President thought that specimens of Ostrea should be present on the half-shell, but the host grimly pointed to the word "May" on a calendar and the club groaned "ne R." Mr. Roosevelt apologized for the absence of Oscar Wilde, whom he had promised to bring along in order to educate the fish-eaters up to a point where they can see the relations of the sunflower and the sunflow. He denied that Mr. Wilde was either a shrimp or a sardine.

The naturalist was not to be found. It was known that he

shrimp or a sardue.

The naturalist was not to be found. It was known that he had paper about him which would take until morning to finish, and which would effectively dispose of the theories of Professors Brooks and Ryder on the generation of oysters

and prove that when the oyster is crossed in love it picks up a razor clam and shaves its beard. But he was missing and the world will lose this evidence. Unfortunately for sience he is a banjoist as well as a naturalist, and when he was found at 3 A. M., he had the professional banjo player in a private roughly a setting the professional banjo player in a private roughly as the setting the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a private roughly as the professional banjo player in a professional banjo pl private room and was getting some coaching on the manipulation of "Home Sweet Home," in harmonics. He had found time, however, in the interval of mending a broken string, to place the lay figure of the African female in the bed of the President.

The Artist had drawn a cartoon which revealed the object of this all night exignific acceptant.

bed of the President.

The Artist had drawn a cartoon which revealed the object of this all-night scientific session. It was a large one, five feet long by three high, and represented the Court of Neptune. The host sat enthroned upon a pyramid of shells, with crown and trident. On his right was a female presenting a petition to him to cease the destruction of the tile fish, and the face of this female was that of the Caterer. Behind the latter stood the Cub Surgeon, as a sea lion, imploring Nep. to listen to the petition. Two scals, the President and the Naturalist, were discoursing about some fish spawn which the latter held in his hand. On the lett of the King stood a luge turtle, whose features were wonderfully like those of the Secretary, presenting him with a bottle and a glass. The Keeper of the Royal Worcestershire Sauce brought up the rear as a nurse, with Oscar Wilde as a baby, who was cagerly grasping after a sunflower whose petals were bank-notes.

The party then separated into small groups and devoted several hours to investigating problems which we do not know enough of to write intelligently upon. They must have taken up arboriculture, or wooleraft, for we heard learned arguments on "chips." Horticulture received some

The party then separated into small groups and devoted several hours to investigating problems which we do not know enough of to write intelligently upon. They must have taken up arboriculture, or woolder, to we heard learned arguments on "chips." Horticulture received some attention, for we heard Howard Carroll explaining to Du Chaillu the excellencies of "two pears," new varieties, probably. Great dice opened on touching a secret spring, and proved to be boxes of eigars, which when lighted caused the fire department, who looked suspiciously like the customs officers, to rush in with extinguishers on their backs, declaring that they smelled smoke, and terrified the scientists by pointing the nozzles at them.

At four in the morning it was found that some of the party, whose scientific enthusiasm had abated, had been in bed for some time, and the President immediately sent a deputation to arouse them and inform them that breakfast would be ready in twenty minutes, and that they must catch the early train. In the meantime the President and the rest retired. The latter finding his room occupied by the miliner's figure and not caring to create a scandal, retired to the yacht, and finding on the beach a great "angler." Lophius americans (or American loafer), took the fish up, with the assistance of four men, and introduced it into several bedrooms, declaring that the cause of science demanded that they should rise and investigate the cause of its death, not withstanding the perfume of decay which lingered round it, and that it was their duty as scientists to ignore all such minor annoyances. The party who had before been aroused were now below enjoying the morning breeze and inhaling ozone enough to give sick men health, and they were delighted at not having been allowed to sleep too much.

At seven breakfast was in order and the steaks, chops, sweetbreads, broiled chicken, and strawberries suffered. After breakfasts one of the party in strolling about, the outbuildings thought he would step into a very small one,

opened by a boy who had accidentally strolled that way and heard his exclamations of gratification.

At 8 A. M. the party embarked on the yacht, after the usual Custom House inspection, and left their host, Mr. Henry Havemeyer, with thanks not only for their unique entertainment, but in the name of science, which had received such vast benefits while the party were enjoying his princely beautifulty. hospitality.

FISHING IN LAKE MINNETONKA.

FISHING IN LAKE MINNETONKA.

I HAVE long thought that the hottest place in the civilized world was New York city during an August afternoon, I do not think so now.

Last August found me in Lincoln, Nebraska; I had come from New York and settled in the "Magic City." as Lincoln is called, with the intention of making it my home. It was not the "Western fever" which caused me to leave New York, but after considerable thorough and deliberate consideration I concluded, and I now find my conclusion a warranted one, that this growing city of the West offered the best inducements to a young man. So July last found me here. It was hot, dreadfully so, Day after day the thermometer indicated 90, 95 and even 90 degrees in the shade. In fact, many mornings I have sat in an office working when the mercury would mark one hundred. Let me say, 'however, that we always have a morning and evening breeze in this part of Nebraska, which renders the heat endurable. I thought I would at last become acclimated, but about the latter part of August I gave in—succumbed—packed my valise and started for "Cool Minnesota."

Thirty-six hours from Lincoln found me in St. Paul. I imagined I could already feel the cool breeze of Lake Minnetonka, and longed for a sight of clean water. I had not seen a real clean stream or lake since I left New York, as the waters of Nebraska are always muldy. Nine o'clock that night found me at Lake Minnetonka. This beantiful sheet of water is about twenty miles from Minneapolis, and is reached by one or two different railroads. As I drank in the cool and refreshing air, I wondered why I had not come before, and secretly vowed that I would not return until I had sure knowledge that the "heated term" at home was over. A word in regard to this lake. It is destined, I think, to become the great watering place of the West. Situated, as it is, so near the railroad centers, many pleasure seekers and tourists flock there. However, I must get on with my story, and it is a fish story. But unlike all stories of its kind, i

thing was fully prepared we started down the lake. The sky was clouded over, and every few moments a few drops of rain fell, but as we had brought along rubber coats the dampness was not noticed very much. And too, we were bent on catching fish. We put out the trolling lines at the suggestion of our boatman, but as the wind was blowing aff and kicking up a little sea, and we were going at quite a rapid rate I did not expect to catch anything. As we approached a low sandy point Miss A—gave a sudden scream (and all who have been out tishing with a young lady as a companion have heard this self-same scream) and cried, "Tve got one." I took the line and soon discovered that we had hooked our first fish. After hauling in about sixty feet of very damp and heavy line, I at last brought to the surface a very small but very lively bass. Peurl smiled in a very knowing way, as much as to say, "that's nothing, we are after larger game." The bass was dropped into the fish box, and as the signs were favorable we let go our anchor.

The poles are now taken out and we prepare for business. And they are indeed "poles." Behold them! A long cane of various degrees of crookedness and clasticity, an enormous chalk line, at the end of which dangles a heavy piece of lead, and a foot or more of brass wire. The hook is a long-shanked affair that resembles a grappling fron. And we are out bass akhing. How this tackle would have amused Gov. Alvord or Reuben Wood! I have fished for bass in the St. Lewrence, Oswego River and Lake Ontario, so when I saw Pearl's rough tackle I simply stared.

When I expressed surprise he clucidated as follows: "Well, you see, the bottom of this 'cre lake is full of weeds and snary, and if you use any of these 'cre flimsy poles, the bass will run into a bed of weeds and stay there. We have these lip poles so we can yank 'em.' Before we got through the morning's fishing we discovered the reasonableness of his argument. thing was fully prepared we started down the lake. The sky

morning's fishing we discovered the reasonableness of his argument.

Three frogs are captured from a pail, and, anid many squeaks and wriggles, put upon the hooks. We are instructed to "keep em moving, and not to let them get in the grass." Then all wait for the first bite. Soon our boatman starts and gives a lively tug at his pole, and in about one minute a fine bass leaves the water and in a very unsportsmanlike manner is dropped in the boat. Now the sport begins. We caught six or soven nice ones in about a half hour. One frog would last until he was torn from the hook, so there was no rebaiting. I remember distinctly that I caught one small rock bass, the lady and James the remainder.

hour. One frog would last until he was form from the hook, so there was no rebaiting. I remember distinctly that I caught one small rock bass, the lady and James the remainder.

We now drifted down the lake, and, as it began to rain, landed at an island and sought the shelter offered us by a company of campers. We had a very pleasant reception, and were soon comfortably at home. One of the ladies, for we found a number among the campers, played the guitar, so we passed the time in singing college songs and telling fish stories. Soon the rain ceases to fall, and Pearl appears with the announcement: 'Now is just the time to fish.' We bid good bye to our newly-found friends and are soon again on the water. We now pushed through a bed of weeds and entered what is called a ''pocket.' This 'pocket' we found to be a small pond, surrounded on all sides by tall weeds. Here Pearl said we would find big bass and pickerel. We enter very quietly and carefully, drop the anchor, put on fresh frogs, and are ready for work. And we found work at once. We were about thirty feet from the weeds, and a bed of illy pads ran out to the boat. At once the boatman hooked a long-snout. In a very few moments the lady and myself were laboring with the same kind of game. Then we got two fine bass which weighed three pounds each. There was a lull of about twenty minutes, when a sharp snap and a word from James (which sounded like a quotation from Burns cut short at the most emphatic part) caused us to look around, and we saw him make a sudden lunge for the bow of the boat, and for a few moments all that could be seen were his rubber boots and coat talls. It seems that a large bass had taken his bait in such a preliminary manner that the pole broke just above his lands, and he had to make quick movements in order to recover the part that the fish claimed. We found on our return that his bass weighed just five pounds and a half. And he was a beauty. About this time, as I was talking about our second capture to the young lady, she informed me th

Park." We caught about two dozen bass after this, and returned in time for dinner.
Our catch consisted of thirty-seven fish in all. The aggregate weight was fifty-seven pounds. When we arrived at the landing, Pearl and a friend strung-the fish on a rope, and putting them on an oar between them, marched up to the hotel. We were met by a host of friends and congratuated upon our success. Everyone looked in open-mouthed surprise at our monster, and the exclamations of wonder were not few. We were back in time for two o'clock dinner, which we fully appreciated, but not to that extent that we did the honor of having the biggest catch of the season.

QUILL.

RED SNAPPER.—The New London, Conn., Telegram of May 10 reports the catching of a red snapper, (Lutjanus blackfordik.) caught somewhere off the New England coast. The fish weighed ten pounds. This is not the first red snapper which has been taken in this neighborhood, although the fish proper belongs to the marine fauna of the South.

Fishing Club House for Sale.—In our advertising columns will be found a rare chance for a small club or a private gentleman to buy an established club house and accessories at a bargain. The location is so near New York accessories at a bargain. The location is so near New Y city that it can be reached in an hour from the City Hall,

ANGLING IN THE ADIRONDACKS.

ANGLING IN THE ADIRONDACKS.

THE weather has been very unfavorable-this spring so far for trout-fishing, and but few, if any, trout have been eaught in this vicinity as yet. According to all accounts we are having about the same kind of weather now, the first of May, as they had on Long Island the first of April. Tuesday, the 2d, we had quite a snow storm, and in the mountains south of here I am informed that it fell to the depth of six inches. There is considerable old snow in the woods yet, and the ice is not out of many of the ponds and lakes.

woods yet, and the ice is not out of many of the ponds and lakes.

A number of sportsmen went to Meacham Lake the first of the week to troll for salmon trout, but found it still covered with ice. Among them was Mr. Reuben Wood, of Syracuse, N. Y. There have been quite a number of salmon caught through holes cut in the ice, I am informed, at Meacham and Chateaugay lakes, both during the past week; but I should judge that there would not be much sport in that way of angling. Just after the full moon in May is considered the best time to troll for salmon trout, and if the ice is not out of the lakes soon, the best of the trolling season will be over before any one will get a chance to take any in that manner of fishing. As far as I am concerned myself, I care but little whether we have any trolling or not. It affords much more sport to take a good-sized speckled trout with a fly rod and tackle than it would to bring the largest salmon in the lakes to "gaff" by trolling. In former years I practiced trolling for salmon considerable, and caught a great many in that manner in the Chateaugay Lakes twenty-five and thirty years ago; but of late years my fishing has been confined entirely to angling for speckled trout, and mostly with flies.

As soon as the weather moderates and the ice and snow the result of the produced treasured to the troude out t

mostly with flies.

As soon as the weather moderates and the ice and snow water gets out of the ponds and streams I intend to take a trip to the 16-mile level of the St. Regis, for a week or ten day's trout fishing. It seems that there are many sportsmen who are anglers that have the impression that there is no longer any portion of the Adirondacks where the waters afford good trout fishing. But such is not the case. Iknow of quite a number of streams and also several ponds in the northwestern part of what is known as the St. Regis district, whose waters will afford as good trout fishing now as I have ever found during the thirty years that I have frequented the wilderness.

of quite a number of streams and also several ponds in the northwestern part of what is known as the St. Regis district, whose waters will afford as good trout fishing now as I have ever found during the thirty years that I have frequented the wilderness.

The 16-mile level near Blue Mountain, Franklin county, affords as good trout fishing during the months of May and June as one could wish for, and is easy of access. A good road leads to it from the Ogdensburg and L. C. R. R., distance twenty-five miles. Brushton is the nearest station on the railroad to it, where there are two good lotels near the depot and a good livery connected with each, where a suitable conveyance can be procured to take parties to the level or any part of the wilderness. A large hotel is within a short distance of the Level, where good accommodations can be found at moderate charges, board \$1.50 per day and other charges in proportion. Good guides and boats with camping outlits are furnished when wanted. The house has been neatly finished off inside throughout the past year, and the accommodations for sportsmen are now as good as at any house of the kind in the Adirondacks. It is called the Blue Mountain House, being pleasantly located on an elevated piece of ground on the side of Blue Mountain high up above the surrounding country, commanding a fine view of it for miles around; Henry Phelps is the proprietor; address, St. Regis Falls, Franklin country, N. Y.

I have spent the greater portion of each season for the past four years on the Level, most of the time in camp, and I believe it to be as good a locality for trout fishing that is any way easy of access, as can now be found in the Adirondacks. There are several streams and a few ponds in the wilderness west of the Level that do not have a hook east into them by a half a dozen different anglers from one year's end to the other, and where the trout are as plenty now as they ever were. But the angler who attempts to fish in those waters must expect to have a rough time of it travelin

It is a great pity that the State did not reserve the whole of the Adirondack region for a park and a hunting and fishing ground. I would advise those anglers who are thinking of visiting the 16-mile Level and vicinity to do so the coming season, as they will probably not find the fishing as good another season. The lumbermen have destroyed all the fishing grounds by making roads and building saw mills, so that

there is but few left now that is good for anything in Northern New York.

The hotel keepers endcavor to make anglers believe who

The hotel keepers endeavor to make anglers believe who live at a distance, that the trout are as plenty in the waters that are near them as ever. But all old anglers know better. I can find to-day better trout fishing within three to five miles of the railroad, than can be found in the waters near many of the largest sporting houses that are from twenty to forty miles away from the railroad. But very few anglers from out of the county have ever frequented the 16-mile Level, especially in the months of May and June. Most of the sportsmen that have been three from a distance came in August to hunt deer, so that this stream has not been fished to death like many of the others, and besides there has not been a first-class stopping place near it until lately, which is one reason that it has not been frequented more.

The Eversiont of Trout.—In respect to that wonderful eyesight which Walton says is "keener than the hawk's." In the first place, Walton was not a very expert trout angler, and, though we love and revere him for his kindly nature, there are matters in his deductions and doctrines which we have learned somewhat more of now than was known 200 years and more ago. Most certainly a trout's sight is not keener than a hawk's, nor anything near as keen as a hawk's. Nature never meant it to be so, because there was no necessity for it; and nature always graduates the means to suit the end. A hawk needs to see his prey in grass or heather when hovering in the air a mile or more off. A trout only needs to see it some three or four feet or so away, and I am quite of opinion that a trout's sight is not nearly so keen as it has been represented to be. It is true that if you come suddenly between him and the bare sky behind, at a distance of, say, twelve or fourteen yards, he will see you instantly and cease rising, but increase the distance to seventeen or eighteen yards, and he does not see you nearly so well, and if you stoop, I believe, not at all. I think it is a question enirely, in that case, of the angle of refraction between the air and the water. In fact, I believe this, that a trout can see you just so far as the angle of refraction enables him to see you, and no further, and this will of course, to an extent, be affected by the depth of water he lies at. But what induces me to doubt the sharpness of his sight is this; If I stand with my back to a tree or hedge, so that I make no distinct outline on the sky, and do not otherwise attract attention, the trout cannot see me, and I can raise him easily almost under my rod-point; but if I move three yards away from the tree or bush, I cannot. Now, I think that proves an eyesight much less keen than a hawk's. Nature meant the fish to get his living in the water and on the surface thereof, and constructe

The Rainbow Trout.—I noticed a short article in your issue of April 13, written by "H. R. G." in regard to the rainbow trout, and fearing that if the gentleman should ever come in sight of one of them again that he might not recover, I will endeavor to explain a little why the rainbow trout sent from California to Mr. Blackford, which he had on exhibition in New York were, as he, "H. R. G.," called them, great black ugly beasts, as I was acquainted with the fish and the manner in which they were taken from the water before they were shipped from California. In the first place the fish were taken from the water right in their spawning season, a time in their lives when all fish show, I think, to their worst possible advantage. Being taken at that season of the year from our pure, cold McCloud River water, killed, packed and shipped across the continent, a distance of some four thousand miles and part of the way on stages over rough mountainous roads, I think it no wonder why they should not present a very bright, fresh and grand appearance. I do not want to underrate the Eastern trout in the least, for we all know them to be fine, but I do defy "H. R. G." or any other man that lives, to exhibit a more beautiful trout, or a trout that would be called by the majority of the people a finer flavored trout for the table, than can be found in the United States trout pends of California. And, taking them on an equal footing with the Eastern trout in both those respects, there comes the advantages which all must admit to be in the inhow's favor: First, that the rainbow grow to a much larger size than the Eastern, as they very frequently weigh upward of ten pounds. Second, that they will thrive and do well in streams where the Eastern trout will not, and are a great deal more successfully matured and hatched where Eastern trout eggs would die at once. Taking these advantages, and others that I might mention, into consideration, I think "H. R. G." "degment a little hasty.—L. W. G. (McCloud River, Cal.)

"Gentles."—What American angler who has read in Walion of a "horn of gentles" has not at first wondered what they might be? Later he has learned that this is the angler's name for what the outside world calls "maggots." They have not found favor here because Americans, after attaining manhood, seldom fish for small brook fish. We find by the Bultimore News that Marylanders use them in gudgeon fishing. We cannot approve the popular name that the Baltimorean gives them; "hunkidori," is not an improvement on that used by Walton, who carried them in a cow's horn. The News says: The use of "hunkidori" (vulgarly called maggots) as bait has had to overcome a great prejudice, and has succeeded in great measure. This prejudice is based on an erroneous idea as to the sources whence the objectionable wrigglers are obtained. The method pursued in their production is to obtain a piece of ment and subject it to the proper treatment for the production of the maggot. It is then placed in a sieve and its living contents sifted into a vessel of cornmeal, in which they are allowed to remain until they have cleansed themselves of corruption. They are passed through two additional meal baths, and come out as clean as if their birth had been of a nature less obnoxious to squeamish stomachs. They are then sold as gudgeon bait and prove, par excellence, the attraction that lures the little fish into the disherman's basket.

HITCHING AN ALLIGATOR.—"An alligator," said Bartolo, "is like a bull-dog; he shuts his eyes and holds on. Did I ever tell you of the scrape we had up the Pomoko hitching an old bull alligator? The brute lived in a hole in the bank of a creek, and he helped himself to a smart chance of hogs and calves. So one day me and the boys undertook to get him out'en his hole and kill him, but he wouldn't come. We run a long heavy pole into his den, and he grabbed it and hung on, but he was that strong that three of us couldn't start him. So we got a powerful mule and hitched her to the pole, and at the second pull she fetched him. But when she looked round and saw what was behind her, she started to run, and dragged the alligator along. She thought the d no She the she fooked round and saw what was behind her, she started to run, and dragged the alligator along. She thought the brute was chasing her, and there is nothing that scares a mule like an alligator. Nothing could stop her, and she ran through the woods dragging him along till he was dead, but he never let go the pole. As for the mule, she was ruined, and was never worth shucks afterwards,"—S. C. C.

Carp in Alleged Salt Water.—The New York daily papers have recently had accounts of the taking of a Gernan carp in the salt waters of Moriches Bay, and its display ou Mr. Blackford's stand. The Times said: "This is the first German carp yet found in salt water in the United States. Undoubtedly this fish being novel to us, and not indigenous, must have escaped from some of the fish breeding ponds in Long Island." We have investigated the case. We saw the fish, which was a leather carp of three pounds. Moriches Bay is in the eastern end of Great South Bay, Long Island, and twenty miles from the inlet. Its waters are too fresh to allow the horsefoot crabs to go there, and the little "mud-pike," Exax americanus, is found there. Mr. Jacob A. Miller, of East Moriches, speared the fish with an eel-spear while "thre-lighting" for eels, within ten feet of the shore. Much fresh water comes into the bay here. Our experiments with goldfish in salt water have proved that they will not live in it, and we doubt if the carp would. CARP IN ALLEGED SALT WATER.—The New York daily

An Angler's Library.—Quite an original idea has been developed by a gentleman whose modesty does not allow his name to appear on the title page of his book in which he has published a catalogue of the works which he has gathered during the past twenty-live years. We have seen a copy of the work, the full title of which is, "Catalogue of Books on Angling, including lethtyology, Pisceulture, Fisheries, and Fishing Laws. From the library of a practitioner of more than fifty years' experience in the art of Angling." This book gives the titles of such works as the compiler possesses and remarks on some of them, and we have looked it over with great interest. The gentleman has a large collection of interesting books, many of which we would like to own, and his catalogue is handsomely printed. The book is a small quarto of seventy-seven pages with authors' names alphabetquarto of seventy-seven pages with authors' names alphabetically arranged. It is privately printed, but Little, Brown & Co., 254 Washington street, Boston, have a few copies for

The Fishermen's Own Book.—We have received a copy of the above book from the publishers, Messrs, Proctor Brothers, publishers of the Cape Ann Advertiser, Gloucester, Mass. It comprises a list of men and vessels lost from the port of Gloucester, Mass., from 1874 to April 1, 1882, and a table of losses from 1830, together with valuable statistics of the fisheries, notable fares, narrow escapes, startling adventures, fishermen's sketches, ballads, descriptions of fishing this and much other interesting matter. We notice several trips and much other interesting matter. We notice several communications from Capt. J. W. Collins, of the U. S. Fish Commission, in which he gives many interesting incidents of his skipper life in his frank, truthful way. The book is a handsome 8vo. of 274 pages. Price, bound, \$1.50 and 15 cents postage; paper, \$1.00, and 10 cents postage.

SALMON SCALES AND CHANGES OF COLOR.-I believe that a salmon sheds its skin just as a snake or lobster does, but with this difference—the snake and the lobster get rid of theirs at one "go," the salmon does it in bits like a man peeling after fever. In the winter and autumn up till spawning time a salmon is of a reddish dirty brown; the moment the spawning is over he begins to brighten until he is ready the spawning is over he begins to originen until he is ready to enter the sea again, when he is as bright as a teaspoon, actually brighter though not so iridescent as a new-run fish, but I cannot tell whether this acquired brightness arises from a fresh polish put upon the old scales for the occasion, or whether it is a fresh set of scales altogether, though I am inclined to thinkit is fresh scales.—J. D. B., in Land and Water.

Fishes of the Pacific Coast.—Bulletin No, II. of the United States National Museum contains the bibliography of the fishes of the Pacific coast of the United States to the end of the fishes of the Pacific coast of the United States to the end of the year 1879, by Theodore Gill, published under the direction of the Smithsonian Institution. This is the eleventh of a series of papers intended to illustrate the collections of natural history and ethnology belonging to the United States, and constituting the National Museum. The work before us gives the titles of books containing notices of the Pacific coast fishes, as well as the principal articles on the same subject, and is very full. It makes 64 8vo. pages, with index, and is a contribution to American ichthyology which will prove of great value to the student. FISHES OF THE PACIFIC COAST.—Bulletin No. II. of the

TROUT IN THE EASTERN TOWNSHIPS OF CANADA.—Magog Thout in the Eastern Townships of Canada.—Magog, Quebec, May 8.—No trout have yet been caught in this section, as the best trout lakes are covered with ice, but we hope that they will be clear in a few days, though the season is very cold and backward. Friend Caseau, of Sheldon, Vt., and the writer visited Trout Lake, near that place, May 1, and had fair sport, our largest S. fontinalis, caught by C., weighed two pounds.—Stanstead.

Fresh Water Mussels Wanted.—The Ichthyophagous Club is desirous of experimenting with the fresh water clam or mussel (Unionida), to see if by any means it can be removed palatable as an article of food. The dinner will take place June 5, at the Palisade Mountain House, up the Hudson. Any person who can furnish a barrel of the bivalves mentioned will confer a favor by writing us

Do Sucres Bite?—Chippewa Falls, Wis.—Notwith-anding the off-repeated assertion, "suckers don't bite." a standing the oft-repeated assertion, "suckers don't bite," a gentleman fishing in the Chippewa River with a spoon hook caught a sucker which evidently did bite—at least two of the hooks were in the fish's mouth when he was landed.— BADGER.

STATEN ISLAND FISHING.—The Westfield, Staten Island, Times proposes to give full reports from the principal fishing stations on the island from week to week,

Hishenlture.

THE AMERICAN FISHCULTURAL ASSOCIATION

PROCEEDINGS ELEVENTH ANNUAL MEETING.

Icontineed.]

M.R. MATHER—It is not uncommon to see small lobsters, much below the legal size, offered for sale in New York city. It seems to be no person's duty to complain of it.

M.R. BLACKFORD—Some people think it the duty of the Fish Commissioners to enforce the laws. This is the case in some States, but not in the State of New York. The Fish Commissioners have nothing whatever to do with the enforcement of the laws. There are eight public officers whose duty it is to enforce the laws relating to fish and game in the State of New York. They are called "Game Protectors." Their appointment is for the State at large, and they have no particular districts. The nearest one to New York city resides in Hudson.

The Pressident—We should have constant.

ticular districts. The nearest one to New York city resides in Hudson.

The President—We should have one for New York city alone, and it might be well for this association to take some action looking to the appointment of one for the city.

Mr. Mather—I would state that a short time ago I attended a meeting of delegates from the New York State Sportsmen's Association in Albany. The object of the meeting was to revise the game and fish laws and draft a bill for introduction into the Legislature. This has been done, and the bill provides for the appointment of four more "Game Protectors," making twelve in all. Two of these new ones are for western counties, one for Long Island and one for New York city.

Protectors," making twelve in all. Two of these new ones are for western counties, one for Long Island and one for New York city.

Mr. Blaauvellt—I have tried to enforce some laws, but there seems to be a difference of opinion as to the way the mesh of a net should be measured.

Mr. Blaauvellt—I have tried to enforce some laws, but there seems to be a difference of opinion are not to be taken into account. There is but one way to measure a mesh, as you will find if you order a net of any net maker, and this is to stretch the mesh the longest way and measure it. Those who measure from knot to knot do not measure the mesh, but only a 'leg.' The mesh is twice as large as they make it. For instance, when it is one inch between knots it is a two-inch mesh. I am aware that some inland fishermen measure differently, but an inquiry at any house that sells nets will show that they are wrong.

The President—I would recommend that the officers of this association send a communication to either the Legislature or the Governor asking for the appointment of a game constable expressly for this ety. I don't see that we can do more. I notice that Mrs. Amelia Lewis, the editor of that popular paper, Food and Health, is with us, and as she has promised to read a paper on the carp and its treatment from a culinary point of view, we will be pleased to listen to it:

The paper was read but Mrs. Lewis took it away for revision and it has not been returned.

The President—Mers. Lewis is the first lady who has honored us with a paper, and there are some things which she has said that I shall remember, especially that earp should never be boiled, never fried nor cooked in land.

The Sexertant then read the following:

THE WINTER HADDOCK FISHERY OF NEW ENGLAND.

THE WINTER HADDOCK FISHERY OF NEW ENGLAND.

BY 6. BROWN GOODE AND CAPT J. W. COLLINS.

The winter fishery for the capture of the haddock, Melanogrammus acyletinus, is carried on chiefly from the ports of Gloucester and Portland, though participated in to some extent by vessels from Portsmouth, Swampscott, and Boston, Although haddock are caught in large quantities, from spring to fall, by numerous vessels and boars employed in the inshore fisheries between Portland and Philadelphia, the winter traddock fishery is peculiar in its methods. It is of comparatively recent origin, dating back about thirty years. We are sold that in 1850 immense quantities of haddock were caught of the travels in Massachusetts Bay, and that a petition mas prepared by the Swampscott fishermen asking for a law which should prohibit travel-fishing on the ground that this method would [soon exterminate the haddock. It is impossible to trace with any degree of certainty these transmits in the year only, by vessels otherwise occupied a large portion of the time. Since the fish have always been disposed of in a fresh condition, they have been less carefully recorded.

FISHING GROUNDS,

dition, they have been less carefully recorded.

FISHING GROUNDS.

The winter haddock fishery is prosecuted, from October to April, on all of the inshore ledges and the nearest of the off-shore banks south of Sable Island bank and north of Cape Cod. The depth at which the fish are taken varies with the locality, but is within the limits of 22 and 30 fathoms; usually in water deeper than 30 fathoms.

In the fall, when fishing first begins, the vessels set their trawls along the coast from Nantucket Shoals to Grand Menan, is 30 to 30 fathoms of water. On the outside of Cape Cod the fishing is within 5 to 15 miles of the shore; in Massachusetts Bay, principally on the outer slope of Middle Bank and the sauthern slope of the shoal ground that lies to the eastern part of the shoal-water on Jeffries Ledge, and along the coast of Maine within 30 miles of the shore, especially about Monhegan Fall, Southsouthwest and Western Ground. Fishing in this region continues until midwinter, and is kept up by a smaller class of vessels, such as those hailing from Portland, throughout the whole season. In the latter part of Portland, throughout the whole season. In the latter part of Portland, throughout the whole season. In the latter part of Portland, throughout the whole season. In the latter part of Portland, throughout the whole season is the latter part of Portland, throughout the whole season. In the latter part of Portland, throughout the whole season. In the latter part of Portland, throughout the same depth, and on Le Have and about Cape Sable. The fishing on Le Have Bank for haddock was first attempted in the winter of 1850-S1. This fishery has been attended with the greatest success. Fishing continues on these outer banks until the end of the season, when it is time for the vessels to engage in other branches of the fishery.

The fishermen who take part in this fishery are usually picked men from the Gloucester fleet. A large portion of

THE TISHERMEN.

The fishermen who take part in this fishery are usually picked men from the Gloucester fleet. A large portion of them are engaged in the mackerel fishery in the summer. This fishery requires as much skill, pluck and endurance as the halibut fishery, and men are selected in both of these fisheries on account of similar qualifications. Not unfrequently the same crew will remain with the vessel in the summer when she is in the mackerel fishery. There is so much competition among those who desire to ship with a good skipper that very often his entire crew list is made out five or six months in advance.

THE VESSELS.

THE VESSELS.

THE VESSLLS.

The vessels composing the winter haddock fleet are chiefly stanchest and swiftest of those which in summer engage in the mackerel and cod fisheries. The Fortland fleet is made up of a smaller class of vessels, averaging from thirty-five to forty tons; these in summer are engaged in the mackerel or shore fisheries. The few Swampscott and Boston vessels which take part in the winter haddock fishery are markermen and mackerelmen in the summer.

The rigging of the haddock catchers is precisely similar to that of the halibut catchers, with the exception that very few of them carry gaff-topsails and riding-sails. Their outlit of

1 Capt. S. J. Martin of Gloucester, writes, under date of May 10, 1881, as follows: "The first ressel that went to Le Have Bank for Ind-dock was the schooler Martins C., of this port. She made her first rip there last winter."

nautical instruments and charts is, as might be expected, less complete. The larger ones, however, have everything which belongs to the outfit of the halibut schooner excepting the chronometer, the Epitome, and the Nautical Almanac. Since the haddock vessels are rarely, if ever, anchored on the fishing grounds, their arrangement of cables and anchors is very different from that in the halibut and George's fleets. They usually have a chain cable on their starboard side, and upon the port side a cable similar to that used by the George's and halibut vessels, from 150 to 255 fathoms in length, which is stowed in the fore hold. One end of this cable is bent to the anchor and the other passes down through a hole in the fore hatch and is coiled below in the fore hold. The anchors are like those used on "Georgesmen."

The deck is arranged in a manner different from any that has yet been described. There is usually a single gurry-pen forward of the house, and the space between the sides of the gurry-pen and the house, and the rail on cither side, is so arranged that it can be divided into pens for the reception of the lish. Three or four pens may be placed on each side.

The remainder of the deck is clear, but there is a booby-hatch over the main hatch, through which access is gained to the bait-room.

The haddock catchers do not ordinarily carry davits or a

The remainder of the deck is clear, but there is a boobyhatch over the main hatch, through which access is guined to
the bait-room.

The haddock catchers do not ordinarily carry davits or a
reeting plank. The mainsail is provided with an "outhauler" or patent reef-gear, which answers the purpose of a
reef-tackle and gearing, and facilitates the process of reefing
from the deck. A few of the larger vessels, however, are
provided with davits and reefing-planks.

The arrangement of the hold is also peculiar. The space
which in a halibut catcher is occupied by the forward icehouse is here taken up by the bait room. The bait room is
sometimes, but not always, bulkheaded off from the fore hold.
It is one large compartment, with rough board benches all
around, on which the men sit while baiting their trawls. In
the center stands a stove. In this room the fishing-gear is
always stowed when not in use. The after hold is generally
fitted up with pens resembling those in the after hold of a
halibut schooner. In these pens ice is carried when the vessel
is making long trips. When large fares are obtained, part of
the fish are stowed in the bait room, which, on the larger vessels, is so arranged that partitions can be built in it by sliding
boards into grooves. The haddock schooners carry a larger
amount of ballast than those of any other class, a vessel of 50
tons requiring 30 or 35 tons of ballast.

THE APPARATUS AND METHODS OF THE FISHERY.

sets, is so arranged that partitions can be some in a cy sacons, boards into grooves. The haddock schooners carry a larger amount of ballast than those of any other class, a vessel of 50 tons requiring 30 or 35 tons of ballast.

THE APPARATUS AND METHODS OF THE FISHERY.

Dories.—The larger indidock catchers carry xix dories, the smaller four or five. 2 Most of the dories used in this fishery are deeper and wider than those in any other there, where the built specially for the purpose. The ordinary dory is also frequently in use. Those dories are it feet in length. When on deck they are nested in the ordinary manner, two or three on a side, and are stowed nearly analyships on each side of the booby hatch, not nested close to the rail, as is the practice upon other vessels carrying dories.

A haddock dory ready to leave the vessel, in order to set its trawl, is provided with the following articles in addition to the trawl lines: Trawl-roller, two pairs woolen nippers, dory knife, gob stick, gaff, bailing-scoop, tholepins, two pairs off. as ours, buoys, buoy lines, anchors, and black balls.

Trawls.—The haddock trawls have the ground line of tarred cotton, of 14 to 18 pounds weight to the dozen. Hempis occasionally used, especially by the Maine vessels and by some of the Irish vessels from Boston. The gangings are of white or tarred cotton, in weight, about 4 to 6 pounds to the dozen. If the pround line at interest in length, and are fastened to the ground line at interest in length, and are fastened to the ground line at interest in length, and are fastened to the gangings to the ground line. The hooks are fastened to the gangings to the ground line. The hooks are fastened to the gangings to the ground line. The hooks are fastened to the gangings to the ground line. The hooks are fastened to the gangings to the ground line. The hooks are fastened to the gangings to the ground line. The hooks are fastened to the gangings to the ground line. The hooks are fastened to the gangings to the ground line in the ground li

eribed.

As is always the case when a number of men are working together at the same employment, there is a sharp competition among the men as to who shall be the first to get his travel baited. The average time consumed in baiting 500 hooks is from 45 to 60 minutes, though the most skillful men have been

2. The haddock-catchers of Maine, and some of the ports in Massa-busetts, fishing with "single dories," carry one for each man besides he skipper and cook. These boats are 18 cet long, and managed by single fisherman. 3 They are fastened either by tucking and hitching, or by a simple itch around the ground line. 4 The Irish ishermen of Boston sometimes use a galvanized hook o he same size without an eye.

S this is to aid the inhermen in recovering their trawis in case the are parted at either end, set in shallow water, where there is a cork bottom, three or tour middle buoys are sometimes used.

'The Irish inshermen of Poston place their trawis in baskets, coil ing the line in one park and putting the batted books in another division of the baskets.

known to accomplish the tesk in half an hour. It will be set that the labor of baiting three or four tubs, which falls dai to each man when the fisting is good, occupies a considerab portion of the day, or, rather, of the night, since the baitis usually done at night. In baiting at night each man has lamp of peculiar pattern which is fastened to the edge of hab by a hook; sometimes the trawls are snarled, and thole night is devoted to clearing and baiting them. A may will go into the hold to bait after the fish are dressed in the evening and perhaps not finish his task until daybreak, whis is time to go out to set again.

Methods of fishing.—As has been remarked the hadden and the standard of the shaden and the same the same transfer the hadden the same transfer the same transfer the hadden the same transfer to the same transfer to the same transfer the same tr

that by a hook; sometimes the trawls are snarled, and the will go into side voted to clearing and baiting them. A man will go into side voted to clearing and baiting them. A man will go into side voted to clearing and baiting them. A man will go into side voted to clear the shall be a state of sevening and perhaps no baiting its task until day break, when it is time to go out to set again his task until day break, when it is time to go out to set again his respect has greatly changed them to the same of them to take them to the same of
is set in the latter part of the day.

The operation of shooting alongside of the dories and picking them up is one of the most difficult feats of seamanship which can be accomplished by a fishing schooner. The haddock trawls are often set in rough weather and at times when there is what would be called a strong whole-sail breeze, and, occasionally, when it blows hard enough to make it necessary to reef the sails. After the trawls have been set and the vessel worked back to the weather buoys, if the weather looks at all threatening, it is customary to take the bonnet out of the jib and put a reef in the mainsail, so that if the wind should increase while the trawls are being hauled the vessel can be managed by the skipper and the cook—the only men left on boar: only men left on boar

only men left on boar.

As might be expected, men are sometimes lost in this method of fishing, the losses being occasioned by sudden snow storms which cut the dornes off from the view of those on board of the vessel, or by heavy squalls which render it impossible for the schooner with only two men on board to go through the necessary evolutions. It should be stated that the evolution of setting under sail is varied at different times and by different skippers, but that the differences in the manner of performing the evolutions are not of much importance, and that the most common method is that which is here described.

When fishing on George's Rank, the Gloucester haddock.

of much importance, and that the most common method is that which is here described.

When fishing on George's Bank, the Gloucester haddock vessels are obliged by the force of the tide to resort to another method of setting, which is called "double-banking the trawl." The tide is so strong that the trawls cannot be set in the ordinary way, for the buoys would be carried beneath the surface. Two dories are therefore lowered at once, and jointly perform the act of setting; only two tubs are set by each pair of dories. The set is made in the following manner: The men in one of the dories hold fast to the weather-buoy while the men in the other dory set the trawl. After the trawl is out, the dory which sets it holds fast to the lee buoy until by some signal, such as lowering the jib, the skipper of the schooner gives the order to haul. The trawls are left on the bottom to or 20 minutes before they are hauled. The men in the two dories begin to haul simultaneously; the anchors are thus first raised from the bottom and presently the bight of the trawl and the two boats drift along with the tide, the distance between them gradually narrowing as they haul.

the trawl and the two boats drift along with the tide, the distance between them gradually narrowing as they haul. Haddock are often found so plenty on George's that it is not necessary to set more line at a time, even were it casier to do so, since a single tub of trawl will often bring up enough fish to fill a dory. Several sets of this kind can be made in a day, when the weather is favorable. Some of the Maine and Swampscott vessels send out only one man in a dory; this usage is called "fishing single dories,"

and is, of course, practicable only in comparatively moderate

THE MANNER OF CARING FOR THE FISH.

As the fish are brought alongside they are pitched into the pens already described. As soon as the dories are discharged and taken on deck, and the vessel is under way, the men begin to dress the fish. The process of dressing differs entirely from that of dressing cod; there are no dressing-tables or dressing-tubs. The men distribute themselves among the pens. Four or five men are engaged in ripping the fish, this operation being performed by seizing the fish by the eyes or some part of the head with the left hand and ripping them downward from the throat. The remainder of the crew occupy themselves in taking out the liver and roes, which are saved in barrels separately, and in 'removing the viscera. The fish are washed by pouring buckets of water over them as they lie in the pens on the deck, and are packed away in the hold or left on deck, unless, on account of distance from the land or mildness of the weather, it is necessary to ice them, in which case two or three men go into the hold and stow the lish away between layers of ice. The fish are iced with greater or less care, according to the length of time expected to elapse before the arrival of the schooner at the market. All the vessels going to Le Have, George's and Cape Negro carry from tive to six tons of ice each trip.

PRODUCTIVENESS OF THE FISHERY.

PRODUCTIVENESS OF THE FISHERY.

The vessels of the Gloucester fleet, in the winter of 1880-81, obtained on an average 350,000 pounds of haddock, valued at \$6,000. The schooner Martha C. obtained about 600,000 pounds, stocking \$11,500. The Edith M. Pew obtained 550,000 pounds, stocking stut \$11,000.

Capt. S. J. Martin, of Gloucester, Mass., writes under date of February 12, 1882, that the schooner Martha C. arrived yesterday with 90,000 pounds of haddock; she was gone eight days. Schooner Jose M. Calderwood, \$5,000 pounds, gone seven days. Schooner H. A. Duncan, \$0,000 pounds, gone seven days. Four vessels left Gloucester on Saturday and were back on Wednesday, each with 40,000 pounds haddock, having ished one day and a half. That is good and quick work. "Schooner Mystic, Capt. John McKennon, has stocked the year ending February \$1,882, \$21,003. He claims high line of the shore haddocking fleet, and so far as we know this is the largest stock ever reported in this fishery. The crew sharing \$750.06. In 1880 he stocked \$17,05. the crew sharing \$750.06. In 1880 he stocked \$17,05. the crew sharing \$765." [Cape Ann Advertiser, February 10, 1882.

"The new schooner Dido, recently built at Essex for Mr. George Steel of this city, has been engaged in the haddock fishery just one month to-day, during which time she has made three trips, stocking \$8,750. On her last trip she stocked \$1,400. Her crew shared for the month, \$188 each. The Dido is commanded by Capt. Wm. N. Wells. Schooner Richard Seestor, Capt. Ozno B. Fitch, on a recent haddock trip stocked \$1,400. Her crew shared for the month, \$188 each. The Dido is commanded by Capt. Wm. N. Wells. Schooner Richard Seestor, Capt. Ozno B. Fitch, on a recent haddock trip stocked \$1,400. Her crew shared for the month, \$189.

THE LARGEST HADDOCK FARE EVER LANDED.

THE LARGEST HADDOCK FARE EVER LANDED.

"The schooner Martha C., of this port, Capt. Charles Martin, arrived at Boston on Friday from a Georges haddock trip, stocking \$1,943, the crew sharing \$91, the result of two and a half days' fishing. Absent ten days. This is the largest eatch and best stock ever reported in the haddock fishery."—[Cape Ann Advertiser, February 24, 1882.

The catches of the average Portland and Boston vessels were not, probably, more than half as great. The Martha C., before alluded to, in thirteen hours' fishing caught \$90,000 pounds of cod and haddock. The total amount of haddock carried into Boston in 1870 was 17,000,000 pounds; of this amount probably at least 13,000,000 were obtained by the winter haddock vessels. The total yield of this fishery does not, probably, fall below 18,000,000 to 20,000,000 pounds.

BINNING FOR THE MARKET.

RUNNING FOR THE MARKET.

RUNNING FOR THE MARKET.

No class of vessels, not even halibut schooners, take more risks in running for market than do the haddock schooners. It is of the utmost importance to them to reach the market with their fish in good condition, and, if possible, to be in advance of other vessels engaged in the same business. In the stormiest of weather all sail that they will bear is crowded upon them, and harbors are made even in heavy snow and fog. The trips are short, averaging frequently not more than two or three days, and rarely not longer than a week or ten days; they are, therefore, constantly running for the land, and are more accustomed to making the coast than the halibut vessels, and become so familiar with the harbors most frequently resorted to, especially with that of Boston, that they are able to enter them when no other vessels, probably not even pilot boats, would care to make the attempt. What has already been said about the dangers encountered by the halibut schooners will apply as well, in its fullest extent, to the haddock schooners.

THE MANNER OF OUTFIT.

In the winter haddock fishery every man supplies his own

In the winter haddock fishery every man supplies his own dory and outfit complete, hesides paying his share of the provision bill. In the settlement of the voyage, the vessel draws one-fourth of the net stock, or, in the case of the older vessels, according to the old system, only one-litth, after certain stock charges have been deducted for balt, ice, wharfage and towage. The remaining three-fourths or four-fifths of the stock is divided equally among the crew, the owner paying the stipper's commission or percentage from the vessels quarter. The average share of the Gloucester crews for the year of 1890-'51 was about \$230. The most successful shared \$500 to \$550. The largest stock ever made in one day's fishing in the winter shore fishery up to 1880 was that of the Eastern Queen, of Gloucester, which carried to the Boston market, in 1873, 5,000 pounds of haddock, and stocked \$1,100. This vessel also made the largest stock of that senson, realizing in five months \$10,250 clear of all expenses, the crow sharing \$550 cach. The crew of the schooner David J. Adams, in March, 1881, shared \$107 cach in a ten days' trip in the haddock fishery.

THE HADDOCK FISHERY FIFTY YEARS AGO.

ery.

THE HADDOCK FISHERY FIFTY YEARS AGO.

A writer in the "Fishermen's Memorial and Record Book" thus describes the haddock fishing in the early part of the present century:

"The fitting out of the fleet for the haddock fishery commenced about the first of April The first move was to run the boats on the beach, or landing, as it was then called, and have them calked and graved. The latter process consisted in applying a coat of pitch to the bottom and burning it down with a tar barrel, which gave a smooth and glossy surface. Painted bottoms in those days were very rare.

The time occupied in making a haddock trip was from two days to a week, the fish being mostly taken on Old Man's Pasture. Heart's Ground, and Inner Bank, about twelve miles off of Eastern Point. The tish were taken to Charlestown for a market, and purchased by the hawkers—among whom were Johnny Harriden, Joe Smith, Isaac Rich and others, who took them over to Boston in handcarts, and retained them at a good profit. The codish were generally salted. The smallest were cured for the Bilbox market, and the largest were made into dun fish, as they were called, for home consumption. They were kept on the finkes several weeks, and thoroughly dried until they became of a readish color, and were highly esteemed as an article of food. The haking season commenced in July, and the pollock lishery was prosecuted from September to the middle of November. Each boat carried three men-skipper, forward hand and cook, who went at the halves, as it was called, the crew receiving one-half the gross stock, and the owners the balance."—(p. 73.)

A recess was then taken.

FIXTURES.

BENCH SHOWS.

June 6, 7, 5 and 9.—Cleveland, 0., First Annual Bench Show of the leveland Bench Show Association. Charles Lincoln, Superintendent; M. Munhall, Secretary.

FIELD TRIALS.

EASTERN FIELD TRIALS.

EASTERN FIELD TRIALS.

The special committee appointed at the last meeting of the Eastern Field Trials Club, to select grounds and complete the programme for the trials next fall, met at Delmonico's, New York, on Tuesday evening, May 11. President Domor, Vice-President Goodsell, and Messis. Grainger and Leach were in attendance. After full consideration of the snitability of the several localities which had been suggested, it was unanimously voted that for the coming season the trials should be held upon an extensive estate of several housand acres situated near High Point. North Carolina division of the Richmond and Danville Railroad, fifteen miles from Greensboro, and besides being of easy access by rail from points north, south, and west, it affords ample hotel and boarding accommodations for visitors. Several of the most prominent of the landed proprietors in the vicinity of High Point have united in pledging themselves that the birds shall be carefully preserved previous to the trials, and that they will exert themmodations for visitors. Several of the most prominent of the landed proprietors in the vicinity of High Point have united in pledging themselves that the birds shall be carefully preserved previous to the trials, and that they will exert themmodations for visitors. Several of the sexpected that arrangoments will be made for reduced railroad fares, concerning which due notice will be given by advertisement hereafter. The committee unnanimosty voted to recommend the leasing of permanent grounds, suitable as to size and location, and the stocking and preservation of the same on a large scale, and to the end that this proposition, if approved, may be carried out in time for the season of 1883; it was recommended that at the next meeting of the Club, a special committee sum for the permanent establishment of the Club, and offers of other large amounts were received through the committee, so that it is considered almostertain that the Club, in its new and improved financial condition, may be able, afte

1882. All entries and communications in regard to be made to F. N. Hall, Secretary, P. O. Box S84, New York city.

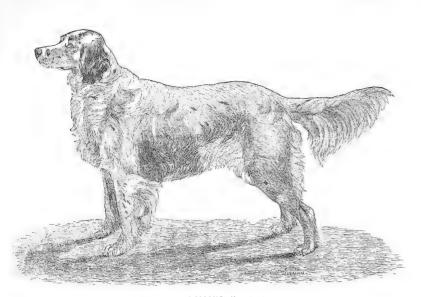

The Member's stake this year will be a cup valued at \$100, which can be competed for only by members handling their own dogs, but each member competing for the same must be the bona fide owner of his dog for at least two months provious to Nov. I, the date when the entries for this stake are to be closed. The entrance fee for the Member's stake is \$10, pay or play. To this stake will be joined a magnificent challenge cup of solid silver and valued at \$250, which has been generously presented by one of the members of the club, upon the condition that it shall be competed for annually in connection with the Member's stake, and shall become the property of a member only when he shall have won the Membor's stake on three different years.

CLEVELAND BENCH SHOW.

CLEVELAND BENCH SHOW.

THE managers of the Cleveland Bench Show have provided. A liberal series of special prizes in addition to the regular premiums, already announced. Silver medals will be given for (A) best kennel 5 English setters, (B) best kennel 5 Irish setters, (C) best kennel 5 English setters, (B) best kennel 5 Irish setters, (C) best kennel 5 English setters, (G) best kennel 5 Irish vater spaniels, (F) best kennel 5 collies, (H) best kennel 5 cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel 5 cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel for cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel for cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel for cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel for cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel 5 cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel 6 cockers or field spaniels, (H) best kennel 5 collies, (H) best kennel 6 cockers or field spaniels, (H) best field spaniel

THE Sacramento Bee says of "Training vs. Breaking"; "The author is the kennel editor of that well-known sporting journal, and a gentlemen who is regarded as the best authority in all matters pertaining to sporting dogs. His advice can be relied upon by all persons interested in the breeding, care, training or working of hunting dogs."

MR. THOMAS F. RYAN'S "PRINCE TAXIS."

PRINCE TAXIS

WE give this week a portrait of Prince Taxis, who won first in the open class for imported English setters at the late New York show. He is a blue belton, seventeen months old, rather under the medium size. He was sixed by Mr. E. A. Herzberg's Aldershot out of his Kate II., both Luveracks, and is owned by Mr. Thomas F. Ryan of New York. This was his first appearance in public, and to carry off the highest honor in his class is a distinction of which his owner may well be proud. The cut is from a sketch by Harry Tallman and is an excellent likeness.

THE BOSTON DOG SHOW.

THE BOSTON DOG SHOW.

THE Third Bench Show of the Massachusetts Kennel Club, held in Music Hall, Boston, last week, was a very successful exhibition. Many of the most noted dogs in the country were present, and the quality of those dogs which were here for the first time exhibited, was of a high order, many of them displaying a beauty of form that speaks well for the good judgment of their breeders.

The new departure of the club in holding a show without giving a money prize appears to have been endorsed by the breeders and owners in a very satisfactory manner and, although the show has proved but little more than self-sustain, we trust that Boston will continue in the circuit and give a show each year, as we believe that the shows that have been held there have accomplished great good in educating the public as to the proper form of our pets.

Although the weather on the last two days was what is known as "Boston particular," which is a trifle nastier than can be produced in any other quarter of the globe, the attendance was very fair, and the club will undoubtedly score a small balance on the right side. This result is highly satisfactory, as at the previous shows given by the association, the members had been obliged to put their hands deep into their pockets to square the accounts, the last time to the tune of several hundred dollars.

The hall is very well calculated for holding a show, being of good size, of great height, and well lighted and ventilated. As many dogs were present as could be conveniently accommodated. The managers were obliged to refuse more than a hundred entries for want of space. The judging appeared to be more satisfactory than is usual, at least we heard less complaint. Dr. Jarvis and Dr. Niven both examined their dogs with great care, and were very fortunate in their selections, both gentlemen are painstaking and conscientious, and the association was very fortunate in securing their services. The exhibition of yard-broken dogs was a very pleasing feature exhibited the wonderful tr

ENGLISH SETTERS.

The English setters were all through a grand lot. In the champion class Thunder, as usual, carried off the honors, although—except in coat and feather—we do not remember to have seen him shown in so poor condition; his nose was dry and hot, and he had a bad cough, and his usually hard flesh and muscle was positively soft to the touch. His only competitor, Lelaps, was also not in first-class condition. Belle's Pride, the only entry in the champion bitch class, was absent. In the imported dog class, there were but three competitors, Foreman, Darkie and Roll, who were placed in the order named. Foreman and Darkie were in better condition than when shown at New York, while Roll had fallen off and was in very bad form. In the bitch class, Lass O'Gowrie and Luna May were absent, and Opal had a walk over. She is a very good bitch and shows a deal of working quality, and is well entitled to the place.

The native dog class was capital. Count Paris, the winner of first, is as hard as nails, and shows lots of quality. He will undoubtedly be heard from again. As soon as the award was announced he was claimed at the catalogue price, \$200, by several gentlemen, but Mr. J. Bailey, of Roxburry, Mass, was the lucky one to secure him. He will at once place him in the hands of a competent trainer and run him at the trials next fall. He is said to be an excellent field dog. London secured second place, but was not much better than Blue Dan, who was placed third; both were fine, showy animals, and well deserved their honors. Clair was also close to them and looked better than when at New York. Grouse Dale was out of condition, but found manters wing to his well proven field qualities. Pride of the Dominion is a very fair animal, and will, when mature, undoubtedly be of good form. Many of the others were possessed of merit, and had

not the rule of giving but one award of each grade been imperative, a number more of ribbons could have been worthily bestowed. Among the best of the unnoticed ones we liked Count Leicester; although he is young and green-looking, he will no doubt look well when mature. Black Dash is also an animal of great power and looks a stayer. Black Ben was perhaps as homely as any of the class to look at, but there was scarcely a better one to feel of. He is also well put together. Sport has a good head and is, no doubt, a workman. We also liked Frank. He has a good lead and is quite stylish, but has a trifle too much daylight under him.

The bitches were a very good lot. Bow Bells, who won first, is a very handsome and well formed blue belton of medium size, and was clearly the best. Zou, who was placed second, and Countess Ella third, are also capital bitches. Sparkle will undoubtedly be very handsome when mature. We liked Nora D. better than either of the remainder; she is young and a little soft, but has a deal of working quality, and we thought her worthy of mention. Jessie would undoubtedly show well if in condition, but she was so fat that her good points could not be seen. Leah was as far the other way; and aithough a good one, was very badly shown.

The dog puppies were all good; Tempest, who was first, is a good one and very well developed for his age; the others were nearly equal in merit and perhaps as well placed as possible. The bitch puppies were also all of them good. Canadian Beauty was in bad condition and should Lave exchanged places with Rosie Dale, who is very pretty and was well shown.

IRISH SETTERS.

TRISH SETTERS.

changed places with Rosie Dale, who is very pretty and was well shown.

IRISH SETTERS.

The Irish stters did not average so good as the English, as there were quite a number of very poor specimens of the breed. After these were weeded out the remainder were a good loci. In the champion class there were four good ones. Berkley was in good condition, and was deservedly given the pride of place. Elcho III. was not in good shape; he has a grand Irish head and is of good form, and we should very much like to see him face the judge in good condition, as we think that when well shown it will be no walk over for his competitors. Dash is also a lirst-class animal and was very well shown. Arlington was not quite up to his usual form. There were no entries in the champion bitch class. The open dog class brought out a few good ones, who were well placed. Dash Elcho, who won first, is a capita one and well worthy a place in the champion class. Kerry, except in head, was his equal. Owing to a mistake by an attendant he was taken into the corner with the rejected and was overlooked by the judge until after the awards had been announced. When he was discovered he was given an equal second, which was no more than he doserved. Philo and Chester were both very very close to him, with not much to choose between. Derby was entitled to his view, and Brisk, Bramble. Snipe and Dan were all worth an hc.

In the bitch class we could not agree with the judge and thought that Meg, owned by Mr. B. F. Clark, should have been placed first. She is a very good one and has less faults than any in the class; we also liked Flourish and Blanche for second and third, they are both capital ones of the proper form. Flirt who was given first is very well put together, but is too near the ground for an Irish dog. She has a good coand so of grand color, but not the type that should win. She also lacks the affectionate eye so characteristic of the breed. Bridget O'More is to young to she was existing pups and all out of condition. The dog puppies were al

Duke of the East was the only entry in the champion class. He is a fair animal, but faulty in head. There were no entried in the champion bitch class. The open class for dogs was not first rate, although there were two or three very good ones, Flash, the winner of first deserved the place. He is a large dog of good form. The bitches were much better than the dogs, and we thought them well placed. There were only five puppies in both classes and they each received an award.

POINTERS.

POINTERS.

There was only one entry in each of the heavy weight champion classes; both were by Strong's Pete, and black as midnight. We fancied Pete, Jr., the best, although Fan is very well formed. They make a gamy looking brace, and their owner may well be proud of them. Three light-weight champion dogs faced the judge, and all of them were good ones. Donald and Bravo were very nearly matched, but Donald inally secured the prize. Snipe is a very good-looking animal, but was in hot company. Rush was looking well, and we imagined that the dogs were very well pleased that he was on exhibition only.

There were only two in the bitch class, and the judge, no

doubt, would have been content if either one had been absent. Both were in capital coudition, Lady Dufferin in as good form as we ever saw an animal shown. She is indeed a beauty, and fairly earned the honor she won. Clytie is also first-class and shows lots of quality. Rue was on exhibition only. She was not in her usual good form, being drawn a trifle too fine. In the open class for large dogs, Knickerbocker had an easy win. He is a very good-looking one, with a great deal of working quality. The contet for second place was between barkie and Black Ben, with not much to chose between them. We imagine that Darkie's grand head won him the place. Sam, who scored vhe., was the only good one left. There were only two bitches and both were good. Belle, who was placed second, was suckling puppies, and did not show near as well as we imagine she would when in condition, and we have no doubt that had she been in good form she would have been at the front. The open class for small dogs was not a good one, with the exception of Peter Black, who was placed first, there was not a good one in the class. Dash is a very fair one, but of the large type. The bitch class was not much better, only one good one in the lot. The puppies were all good. Dick Deadeye and both of the bitches were very good. We were disappointed in the pointer classes, as we expected to see more of them, and a better average in quality.

IRISH WATER SPANIELS.

There were but two entries in this class. Smuggler is a very fair specimen, and was placed first; but the other was evidently in the wrong class, and the judge very properly withheld the award. Smuggler is

SPANIELS OVER 28LBS., OTHER THAN BLACK

SPANIELS OVER 28LBS., OTHER THAN BLACK.

This was also a poor lot, with the exception of Major who was awarded first. He is a very good Sussex, but was shown too fat. This was also the case with Dart, who was transferred from the next class and given second.

The class for cockers, other than black, under 28lbs., was very fair. Taify, who was transferred from the heavy class, has a very gamy appearance, and looks like a worker. The heavy class had only two left in after the light weights had been transferred to their proper places; but they made up in quality what they lacked in numbers. Success did not belie his name, as he secured first. He is a very large dog and well put together; he has lots of bone and muscle, and a capital coat, his head we do not, like, it is too large. Black Prince we much preferred for the position, he is nearer our idea of a spaniel, and has a deal the most working quality. There were only two bitches in the class, both were good and rightly placed. The puppies were also good, and deserved all they received.

FOXHOUNDS.

We were disappointed in the foxhounds, as we had expected to see a grand meet. Dixie, who was placed first, was the only real good one in the lot.

BEAGLES.

The beagles were all good and properly placed.

FOX-TERRIERS

The fox-terriers were an ordinary lot, yet owing to the small number present, all received prizes.

GREYHOUNDS

Only two greyhounds put in an appearance. Quick we chought much the best, but owing to a vicious temper she could not be examined, and Sharper was properly placed first.

DEERHOUNDS.

The deerhounds were all good, Lance exceptionally so, reminded us very strongly of Frida, who won our love at New York show. There was not much choice between rum and Dare—both of them were good.

MASTIEF.

MASTIEF.

The mastiffs were out in force, and the display of these magnificent dogs was immense and far ahead of anything ever seen in this country. Jack was the only entry in the champion dog class, and is a very fair animal. In the bitch class, Rab was placed over Leah. This decision was protested by her owner. Leah was not in as good condition as when shown at New York, while Rab had improved, and although they are widely different in form, there is not much choice between them. We thought that Leah, with her massive proportions and good head should have been placed first, although she shows her age and was not in good form. In the open dog class there were five noble animals. Tuk, who was placed first, although a trifle under-sized, is the best that we have seen for a long time. The bitches were also grand. Lioness, who was given first, is a capital mate for her kennel companion Turk. Julia and Baby were very near together, and Lotta was almost as good. The puppies were all good and well judged.

St. BERNARDS.

ST. BERNARDS.

This exhibit was grand, with scarcely a poor one in the lot. They should have all been entered in the rough-coated class, as there was not a smooth-coat in the lot. Alp II. was given second in the smooth-class, and the other prizes were withleld. He is evidently a cross from a rough and a smooth, and the prize should have been withheld. We imagine that the judge could not ignore his grand head; nearly all of the rest were transferred to the rough dogs. The champions we did not think could compare with some of those in the open class. Rodney deserved his first, as he was the best of the two. In the open dog class Nemo was first, although his hind leg, which was broken some time ago and very badly set, showing quite a bunch, he was clearly entitled to the place. He has one of the grandest heads that we have ever seen; indeed, we consider his head equal to Bayard Jr.'s. He is also of magnileent size and well proportioned; his bail is capital and well carried. Snip is also first-class, and with an added year will be superb. In the pupy class there were eight unnamed ones of one litter by Bayard, Jr., out of Sappho, that were entitled to a first prize each, but as this was out of the question the judge did as well perhaps as was possible, although we fancied the vhe for first place. ST. BERNARDS.

Rocks, who won first place,

Rocks, who won first, is the best Newfoundland that we have ever seen. Bayard we also liked very much. He is only eight months old, but gives promise of turning out a "stunner."

COLLIES.

"Stunner."

COLLIES.

This class was a capital one all through and very well judged. Marcus won first in the champion class. He has the best collie coat that we ever saw, and was in even better condition than when shown at New York. Tweed II. is also aspital one and a first-class fielder as well. There were only two bitches present. Lizzie, who won first, is very good. Isle is also well formed, but was out of condition. In the open dog class there were just ribbons enough to go round, and each scored one. Prince, who was placed first, looks a workman. We also liked Rattler. In the bitch class Meg won easily. We thought her the best bitch shown. She has lots of quality, is of capital form, and has the sweetest collie head that we ever saw. She is a trifle under size, and her color is not of the best, but in everything else she is A No. I. Efficia salso a first-class animal and was given second. Her owner was dissatisted with the decision and withdrew her. This action was unwise, as he clearly had no good reason for the course he pursued. In the puppy class there were three nice ones, who deserved all they received.

BULLDOS.

BULLDOG

The bulldogs were very good, Blister taking first in the champion class. In the open class Thunder won, although less than a year old; he is very well developed and has excel

IMAY 18, 1882

lent points. Bonnie Boy, who scored second, is also a good specimen.

specimen.

ROLLY TERRIERS.

Nelly was the only entry in the champion classes, and was well worthy the award. She is very neat and good all over. The open class for dogs was very fair. Brandy, the winner, was the best, although many of the admirers of this breed were sweet upon Squib. We at first thought him the best, but upon examination we found him to be understoot, which is a scrious tault in a terrier; his eye is also too full; his form is a triffe the best. The bitches were not good, all of them showing scrious defects.

PUGS.

showing serious defects.

The pugs were all good—some of them very fine, and we heard no complaint regarding the awards, which confirmed our belief that they were properly placed.

BLACK AND TAN TERRIERS,
There were only three in this class and all were good.

Vortigern was deservedly placed first.

This class somehow got badly mixed, and several of the entries were transferred to the Yorkshires, where they properly belonged. Those that remained, although very pretty, were not good as Skyes.

NOUGH-HAIRED TERRIERS.

These were a miscellaneous lot. Tatters, who was awarded first, is a fair Airedale, and Bessie, who won second, is a very good Scotch. Tip, who was placed third, is a fair wire-haired lox-terrier.

This class was fair. Tattors, the winner, was first-class. We also liked Dandy, who was transferred from the Skyes. There was only one entry in the toy terrier class—a very pretty one.

KING CHARLES,
There were only two entries in this class who were well

These old-time favorites appear to be fast going out of fash ion. They are too delicat for a cold climate and more hardy animals have usurped their place. There was but one exhibited, a very fair one.

tted, a very fair one.

POODLES.

There were but two entries in this class, a white and a black; both were fair specimens, with not much to choose between them. This was the last class on the catalogue, but room was made for the Pekinese pug Tai-Tai, and an extra first prize was given him. He was imported from Shanghai and is perfectly lovely. The following is a full list of the

AWARDS.

Getty lovely. The following is a full list of the AWARDS.

Champion English setter dogs.—Ist, Thunder, black and white, ticked, 5yrs., Pride of the Border-Fairy II., A. H. Moore, Philadeline of the Border-Fairy II., A. H. The Masachusetts team, which included some of the best shots in the association, were pleased at their reception here, and staid that the Newport team compared favorably with any of the teams they had shot against. The next match will be shot at the Walnut Hill range Saturday, May 21, when the home team expects to make a better showing

ter showing.

CAMDEN, N. J., May 10.—The Sixth semi-anual meeting of the Pennsylvania State Rifle Association was held upon the Stockton Range here to-day. The day was not favorable, but the second the conditions were considered very favorable. The second upon ring targets, the scores of the loading matches standing. Inti-vidual match at 2007ds. Open all day. Five shots each score. The highest aggregated of any two scores to count.

CATSKILL, N. Y., May 3.—The following score was made here by Dr. D. F. Wilcox to-day, 200yds of hand, on the Rip Van Winkle Range: 75 out of a possible 75. It is ahead of a uny shooting in this section. I don't think there is a man of his age (32 years) who can hold a rifle with him. By taking the two last shots on former score (which were bulls) It makes 17 consentive bulls. The above score wins the championship badge that we have here. Before this 48 out of 50 had taken it by three different shooters.—G. F. T.

BOSTON, May 13.—There was a very small attendance of bullseye seekers at Welnut Hill to-day, and the few that were present shot under very difficult weather conditions, the wind blowing a gale from the eastward. The scores are appended: Sharnshooter's Match

CREEDMOOR, May 10.—The old range was not a very desirable place to visit during the rain-storms which have prevailed so freely of late, and accordingly the second stage of the international Practice Match was not full in numbers nor very excellent in scores. A few were out, however, and went over the distances, firing seven shots each, at 800, 900, and 1,000yds. We give the scores below, with the scores of the same marksmen as made on May 6, when the first stage was fired through:

May 6. May 19.

		200 500 600				atity 1

MEASUREMENT IN GENERAL.

MEASUREMENT IN GENERAL.

WE reproduce a very well considered article on the subject of measurement, written by Mr. Landseer MncKenzie, A. I. N. A., and which appeared in Honl's Miguzine for May. We join Mr. Mackenzie his belief that the Scawanhaka rule is far from perfect and must be considered only a temporary makeshift in character. But since nearly all rules in verse partake of an empirical nature, being merely patchwork to satisfy temporary conditions as to vested interests, variety of type, etc., the Scawanhaka rule is no worse than others in that respect, while on the whole its tendencies in the American fleet at least, will prove beneficial in encouraging less extravagant, hard, and heavily sporred heats than those produced with length rules as a stinution in the way of promoting the largest bluk on a rules as destination in the way of promoting the largest bluk on a fault, the rule is not perfect nor sound, but compared to existing rules, especially length rules, the change inaugmated is one we are not sorry to see put into general practice for a time at least, Mr. Mackenzie exhibits a mastery of the subject when he deals with the popular length fallacies of late reterrated in a sort of semi-official way by sundry investigating committees of anateurs, to whom the arrhous task has been allotted by their clubs of satisfying classing interests and common sense in some formula acceptable to all. That 'length gives speed' is an absolutely meaningless phrase and often the reverse of the truth is so easily shown by the example of next, figural, and perhaps six times the displacement, and four times the sail area of the gig, that it is really astonshing with what tenacity the superficially grounded cling to such a shadow and overlook the substance in the backerround.

Mr. MacKenzle points out an instance of a shorter and faster form which carries to own lesson, and we are glad to find other thinkers

coming to the same conclusion as ourselves. Length can only "give speed" if an excess implied necessarily a diminution of resistance. Accepting Froutie's well-substantitude conclusions that in the forms resistance is to be asceroed to friction and wave making, it follows resistance is to be asceroed to friction and wave making, it follows resistance is to be asceroed to friction and wave making, it follows resistance of the property flace of material and longer reseal lacking the economic or may flace of material and longer reseal lacking the economic or the property of the property

discuss by covering up the soves instead of removing the ducks returning to Mr. Mackenzie's paper, we note his leading up to a system including a consideration of displacement.

What Mr. Mackenzie's ultimate conclusions will be remains to be seen. So far as he goes his logic is uncontrovertible. Continuing his line of argument and "going bothind the returns" we are led up to measurement by bulk, since the amount of displacement which can be assigned to a vessel may be deemed as varying with the bulk employed. The man dealing with the greatest bulk in his design has increasily the greatest displacement at his disposal. Just what he lacements the greatest displacement at his disposal, Just what he increased the greatest displacement at his disposal, Just what he increased the greatest displacement at his disposal, Just what he increased the greatest displacement at his disposal, Just what he tother elements making up his design, in all of which he should be to the elements in the greatest displacement at his choice. The bulk he is handling in the production of all his elements is the ultimate source upon which he draws, and to compare his this hed labors with those of other near we insist that clear logic demands comparison by the bulk brough the play. Given more bulk and an advantage is at the brough the play. Given more bulk and an advantage is at the bulk brough the play. Given more bulk and an advantage is at the strength of the play of the play of the play displayed the flows of a larger bot ends in being outstripped ex hypothens.

The models in both cases are equally as good, since they are identical in proportions, and the results of a match should place them the since the difference in bulk, this is accomplished in logical sequence. Now models differ in shaps in addition, the application of the rected times' the extent to which one style of mould is faster than the other. But substitute for tais basis a trial by length, and the shock of the first played in the played of the proposal of the played of the p

that should not occur mounted of the two. A lett-immed protecting data of the two creasing and one which Forker and vicious in the effect, darking an occur to meet that the trees. A proceeding without the grave.

Mr. MacKenzie's paper reads as under:

The new Y. K. A rule, though it is distinctly an improvement on its predecessor, lacks the flavor of finality. It has not yet been tried, but evidently, it is very generally regarded as no more than a temporary stopping-stool from the creas absurdity of the old Thames-fore, in the meantime, to cast an eyo to windward now and again, to see what is going on, and to derive a lesson of encouragement or warning from what others do.

The rupid and maintained successes of the Scotch cutter Madge, in America last autumn, seems to have startled the yachting gentlemen of that country, with uncomfortable suddemenss, out of a very religious trust in their method of spreading craft out up in the tup of that country, with uncomfortable suddemenss, out of a very religious trust in their method of spreading craft out up in the tup of that country, with uncomfortable suddemenss, out of a very religious trust in their method of spreading craft out up in the tup of the same in principle as the V. R. A. rule, and not materially different in practice) because the product of length and breadth (which is the same in principle as the V. R. A. rule, and not materially different in practice) permitted the deep stranger to "go through" then with uncommon ease, and moreover, put a premium on her type. They deserve our admiration and respect, that in enangua their rate they have endouvered to meet that type without fear or favor, rather than to protect their own, and dream alty trait is omnipotent.

In the Field of April 1, appeared a very interesting record of what the S. Y. C. has done and their reasons for toting it. Some days after that in the same tourse lay a panaeck for the cvils we grown under. What the S. Y. C. has done and their reasons for the first that in the same tourse lay a pa

fast as another somewhat shorter and wider not having a straight of breadth. The reason is that the shorter vessel has more bulk, and less wave making resistant at the stream of two vessels where the parallelopipedous that the stream dimensions are cubically equal, but the lengths unequal, the stream of the s

there is a microsses in a much greater ration than lenial dimen-ions. They dwelt on this matter because I believe that this notion about length does much harm to the cause of just yacht measurement. But eagin does much harm to the cause of just yacht measurement. But et me hark back. Before adopting this rule 'several others seem to have been dis-

length does much harm to the cause of just yacht measurement. But let me hark batch.

Before adopting this rule 'several others seem to have been discussed.

"First in order came the cubical measurement. This was discarded for the reason that the present desideration is a boat of heavy displacement, and much more freeboard than has been customary. But cubical measurement is directly against such a type."

The season for the adoption of this rise. It think, the rule and logical reason for the adoption of this rise. It think, the rule and logical reason for the adoption of this rise. It think, the rule and logical reason for the adoption of this rise. It think, the rule and logical reason for the adoption of this rise. It think, the rule and logical reason for the adoption of this rise. It think the rule of the same type; and the ground is taken at the outset by this neasurement that all boats are of the same type; and the ground is taken at the outset by this neasurement that all boats are of the same type; while in this club the boats are widely different in type, and length could not be used with fairness to all, a length measurement, and this expression of adverse opinion from a country where it is much used, should do them good.

"Thirdly a dimension rule was broached; but when it was care-tully examined it was found that while depth could be utilized in a small boat, like Madge, with all the balast outside, depth could not be made used of in the same way with a large boat, thus giving "lepth a small boat, like Madge, with all the balast outside, depth could not be made used of in the same way with a large boat, thus giving "lepth a small boat, like Madge is countried to the 14th of the schemer, with all ballast inside. This put an end to taxing beam as a dimension."

If I understand this, the dimensions were discussed separately, I utterly fail to go with this method of reasoning. If it was a three-dimension rule under discussion, the very essence of it is, to take the substance of the very large and the pr

garded as of equal capability, and ought to sail without time allowance."

Assume two boats like these, exactly equal in length, then the difference ence of their sail areas, will be the measure of the difference of their rateings, as both have to be multiplied by the same length. Therefore the "wide and heavily can was sed would" is most taxed. But broadly speaking they may be looked on as "of equal capability." The teachings of the Madge victories seem to be, that whenever there is strength enough of wind to overcome the inertia of the heavy displacement boat, she will sail faster with less, or the same sail. In a strong wind, when they are both neeled over, she will carry the must sail of the two. So that in this case we have the absurdity of the boat which actually can carry only the least sail being taxed for the greater area!

the two. So that it is a carry only the least sail being taxed for the actually can carry only the least sail being taxed for the stability curves of Florinda and Julianar were published in this magazine for April, 1880. By them we may see that at small angles of heel the former has the greatest area of suit; at 25deg, they are equal; and at 35deg, Florinda has reached her maximum, which Julianar does not reach till 70deg or more.

greatest area of sail; at 25deg, they are equal; and at 35deg. Florinda as reached her maximum, which Julianar does not reach till 70des or more.

With such a paramount advantage, it is clear that the exaggerated type which has grown up under the Thames rule, and been supreme ever since, would be supreme still were this rule employed.

The Daily Tetegraph cannot have considered this, or it would not please the supreme of t

will sail faster in a light wind, with the same or less area of sail, than the broad and shallow, as Madge seems to have shown is the case;
When they are the same size by "parallelopipedon measurement," the broad boat has the least actual friction, but the deep has the least compared to her neight. And this subtle influence of weight shows the profound importance of considering it chiefly in measurement. Any measurement not so based is wrong in principle; and dealing with some quality of design in a vessel, as it necessarily must, is no other tana an arbitrary and, therefore, a bad handleap.

I will conclude this attempt to "smooth the way" by quoting the opinion of W. H. White, Esq., Chief Constructor of the Navy, which I was delighted to hear given at a recent meeting of the flat status of the sage Law "Another proposal deserving notice is what may be termed "Parallelopipedon tonnage."

"Another proposal deserving notice is what may be termed "Parallelopipedon tonnage."

"The volume of the parallelopipedon, whose sides are the length extreme, breadth extreme, and mean (or extreme) draught, is to be taken as a basis for tonnage.

It is alleged, for example, that 'box-shape!' vessels would be built, and vessels of decent form handleapped. Further, it is assorted that the evils of the old B. O. M. rule would reappear. I do not think that cliner of these results would follow."

I think it is fair to argue that if such a high authority as Mr. White does not anticipate evil effects to the mercantile marino from the use of such a rule, how much less need we fear it for the Yachting Marine?

DELAWARE YACHTING.

DELAWARE YACHTING.

Editor Forest and Streum:

As the Quaker City Yacht Club's annual regatta this year promises to be the grandest yacht tournament on the Delaware, the mention of these famous calin yachts may not be out of place. The Clara, although not to the "manor born," is one of the neutest lined yachts here, everything harmonizing, and after a close inspection from keel to planksheave we promome are perfect, at least, so for as the dishmaster, one who understands her "nervous" sensitive nature, and yet a few days ago, with her main sheet blocks hauled together almost to the cramping point, she did some splendki salling. The

Minerva, our champion, being larger, overcomes her quick-heeled competitor by power. Yet, believing as I now honestly do, that this content of the content o

LENGTH MEASUREMENT.

LENGTH MEASUREMENT.

It is pleasant to know that Mr. Collin Archer has receited from his former advocacy of length, as we may lafer from an sindorsement of the Seawanhake stability rule. Possibly Mr. at most induced to look with more favor upon a bulk rule when the latter shall have been fully discussed in these columns. At all events, in withdrawing his support from length he has the thunks of all who wish to see model go unfettered. When Mr. Archer rists was led undeclare in favor of length, he supposed the rule yet untried. It would seem that through these columns he has come to recognize the action of the search of the s

BUFFALO YACHT CLUB.

BUFFALO YACHT CLUB.

Editor Forest and Stream:

The following officers have been elected for the year: Commodore, J. S. Provoost, yeath Alarm; Vice-Commodore, T. P. Frank, yacut Turk; Secretary, E. P. Field; Treasurer, C. L. Abell; Measurer, A. L. Abel

CUTTERS.

CUTTERS.

Editor Forest and Stream;
Will you be kind enough to inform me why the cutter Murlel did not go South, but went East instead. The writer is unkind enough to think had she gone South, or attempted to do so, and got caught in present northeaster, that the famous cutter would never have been heard of again. Am I right or wrong to the coast. As to the facety wrong. Why the Murlel went East we do not know. Sho have the coast with the coast was to the coast as to the capacities of cutters in rough water, the true coast. As to the capacities of cutters in rough water, the true the registry publications teeming with hard weather passages and the English publications teeming with hard weather passages to turn the ten ton-Murlel against a sea which would send then first to sloops foracle and Fanny home half-wrecked, if they did not drive on to the beech before. We have tried both kinds. As weatherly, able sea boats, cutters are immeasurably superior to boats of shoul hold and flat floor).

DEAD RISE IN CANOES.

DEAD RISE IN GANCES.

Editor Forest and Stream:
In your issue of 20th April is an article under above heading. I have not much to say on the subject at present, as I want to know what I am talking about before I say anything. I have asked soveral "who know," what a Diamond cance is, and they all give it up and request to be asked something easier, something connected with the diagreed of the saked something easier, something connected with the diagreed oblige. The wrong the saked something the second of a Diamond, it would greatly oblige. The wrong is used to be a diagreed to the saked something the

SEAWANHAKA RULE .- In reviewing stability rules, our French SEAWANHAKA RULE.—In reviewing stability rules, our French contemporary Le Yacht has the following: "Yin new measurement of the S. Y. C. will certainly give equitable results for existing boats, but it is to be presumed in spite of the committee's report recommending its adoption, that it will tend to create yachts of bad qualities. In fact, one will be induced to construct nulls offering, its is true, little resistence to propalisin, but at a sacrifice in stability, for by the rule it is found that a compossation is granted for the diminution in stability. The saume as length massurement has produced a new modification in the distribution of the composition of the produced a new modification in the distribution in the latest produce a new modification in the distribution in the latest produce a new modification in the distribution. But it will at all events be an interesting study to follow the development. Let us thank the Seawanhaka Y. C. for having opened a new field of study through the experiences its members will undergo."

through the experiences its membe, s will undergo."

JOURNEYMAN.—The little racing sloop, Journeyman, formerly of the Columbia Yacht Club, now hailing from Stamford, Come, will not be put in commission until late in the season, as her owner, Mr. W. L. Brooks, of the N. Y. V. C., is enjoying a trip through Encope with his bride. The Journeyman has the reputation of being one of the fastest boats of her size-37tt. 9in., having won twenty-four out of twenty-six races in which she entered. Last fall she received a wheel and a new suit of sails by Sawyer, and is now trim and suip-shape in appearance. She is laid up at Stevens' Polat, about caree miles from Stamford.

NEW CUTTER.—W. P. Stephens, of West New Brighton, S. L. has taken the contract to build the new four-ton cutter for Mr. H. W. Eaton, Seawannaka Corintinion V. C., desertined in the two last Issues of this paper. We expect namy similar yachts will be init down in time, as the supercity of 'deep keel boals of the cutter order for effective cruising and life affont is becoming very generally conceeded. Four tons of cutter will go as far as twenty tons of sloop in affording a rational participation in the sport from all points of view.

WAYE OREST.—Mr. E. N. Dickerson, Jr. 8, C. Y. C. has bought the old-time schooner Juniata and re-curistened her as above. She is 17th. over all, 74th. Jin. load line, 18th. Sin. beam, and fit. deep, Has been hauled out at Pleygrass to receive new decks, spars and stituge. As she is, or was, something of a flyer, she may, when in shape and properly tooled, take the starch out of some of the later productions.

OUTSIDE BALLAST.—The San Francisco schooner Chispa is re-ported much improved with her lead keel, and more buoyant than feorer. A gain in speed is also claimed for her. The Nancy D., of tao Cape Ann Y. C., has received an iron keel. The Turk, of Buffalo, is also having a lead keel andded.

also having a lead keel added.

MAGGE—An illustration and description of this famous 15-ton cutter soon to make her appearance in our waters is left over till next week, chanks to old Soil declining to appear from bohind his drizzing vell to photograph the skill of our special artist.

OUTSIDE LEAD.—Says the San Francisco Olympian: "The schooner Aggie is to have a lead Teel at once. Five of the six large schooners in our bay now have outside lead. Forest AND STREAMISTHIK REPINGUE IN SOOM WORK in bohalf of outside ballast."

CUTTERS.—Capt. Geo. Patterson, Cape Ann X. C., has given his yeach Nellis Burkett a regular cutter rif. Sue looks much improved, and her example is likely to be followed in the club.

TRUANT.—Mr. Chas. A. Cheever has ourchased this cloop and will give ber an overhauding. Over all 51ft.; on line 45ft.; beam 15ft.; beam 15

The Parker Gun.

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have con more laurels than any other gun when brought in competition in the field or at the trap. At Coney sland last year, at the New York State Convention, the PARKER won the Pierce Diamond Eadge and the Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

SHIELDS'

American Improved Gut Leader

CASTING LINE.

My invention consists in adding to a leader a reenforce at the several points where the upper files
are to be attached, by which the size of the line
are to be attached, by which the size of the line
are to be attached, by which the size of the line
are on it by chafing from the loop of the dy-snell is
greatly prolonged, and the doubling of the leader
in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper files of a
cast about a leader of single gut, the latter soon
becomes badly chafed and its enameled surface
worn off.

in the act of looping on such snell greatly facilitated. Herectore, in looping the upper flies of a cast about a leader of single gut, the latter soon becomes badly chaffed and its enameled surface. In addition to this it is difficult to hold the loop of the leader in the act of looping the snell to it sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is no sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 2 is a leader of the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 2 is a leader and in accordance with my invention, while Fig. 3 shows the manner of looping the leader in the act of attaching the fly. In these drawings, 4, Fig. 1, denotes a leader of silkworm gut daspited to the purposes of hy-fishing for trout or bass, and as herefolore made, such leader being composed of several lengths of guthent to the div being looped about the leader, as shown at c. In carrying my invention into practice, I add to the leader 1 and on or more points (according to the number of flies to be used in the east in addition to the stretchers) and additional piece of gut A, which I term a "renforce," thus doubling the body of the leader a such power of the stretchers and the shown in Fig. 2, in which two adjacent ends of two strands of gut are laid side by side and knotted together, as shown at d'd."

The easiest way to apply a fly, and the one generally practised, both with my leader and those herefore in use, is to double the leader fram a loop was the proper of the leader fram the safe in a langer gut the loop of the leader and those herefore in use, is to double the leader fram the safe of and detaching the fly she list often annoying and tedlous, owing to the flexibility of the safe of a such part of the leader fram the whole taut, as in Figs. 1 & 2. With a single gut the act of holding the loop of the leader fram the loop of the leader fram the own in Fi

of the files from the leader is generally facilitated in consequence. All fly fishers will readily see the advantage there is in using them.

The easiest way to apply a "fly" or to remove it without impairing the strength or durability of the leaders. Length 3, 6, 9 ft., made of superior slik worn gut in all varieties.

A SIGN OF THE TIMES.

WE were last week officially informed of the purchase by the Kitty Hawk Club of the Van Slyck property in Currituck county, North Carolina. Mrs. Van Slyck's has been for so many years a resort for Northern sportsmen, that it is probably as well known among those who enjoy fowl shooting as any locality of the kind in the country. have been made in the past to secure these grounds for the use of several well-known shooting clubs, but without success, for the property has been held at a price which was almost prohibitory. The Kitty Hawk Club, however, have now succeeded in securing it, and by this purchase have added much to the value of their already extensive preserves in North Carolina. The estate consists of a considerable number of islands, points and marshes, on which the canvasback, redhead, goose and snipe shooting is excellent, together with a thousand acres of arable upland, plentifully stocked with quail. The buildings on the property are in excellent condition, and will probably be used for the present as club headquarters.

To many of our readers who have been accustomed to make at least one yearly pilgrimage to Van Slyck's, the sale of this property will be unpleasant news, for when one has become accustomed to visiting a shooting place for a number of seasons, it is hard to be obliged to change one's habits, and to have to look up new resorts. Slyck's, however, after having for years enjoyed the reputation of being one of the very best places for fowl on the Atlantic coast, the show shooting ground to which foreigners were taken, is now closed to the general public, who must therefore turn elsewhere for their shooting. We cannot but feel and express a sincere sympathy for those who, by the sale of this famous resort, are thus evicted, as it were; turned away from a spot which has for them so many pleasurable associations, and forced to abandon the well-remembered points and islands, scenes of so many happy

Our supply of game is each year diminishing, because our laws for its protection are imperfect, are not properly en-

forced, and because of the foolish and wanton over-shooting which takes place at all points which are at all accessible. This diminution goes on in a constantly increasing ratio, and hence the shooting grounds which can be easily reached are rapidly being swept bare of birds. This results not less from constant pursuit than from their being killed in great numbers. For fowl are not slow to learn that localities where there is no peace for them even on their feeding grounds must be at once deserted. The knowledge of a good shooting locality, however well guarded, soon spreads, and an area that could accommodate ten shooters is parceled out among a hundred. But there are certain localities where all the conditions of life are favorable to the existence of the birds, places where food is abundant, depth of water favorable, and climatic conditions just what are needed. Such localities may be termed the natural winter resort of the birds, and to such they cling. Hither in countless multitudes they have flocked in the autumn for ages past, and here, with thinned ranks, they still gather at the approach of winter. Such places, properly protected, could be made, as of old, to swarm with fowl. Now that this is coming to be understood, the natural resorts of birds are passing into the control of people who are determined to protect them.

The public shooting grounds are thus every year becoming more and more contracted. People are beginning to realize the fact that the days of fowl shooting will at some time not very distant come to an end, that the increase in the number of those who use the gun, the improvement in arms, the new regions being constantly made accessible by railroads, the continuance of spring shooting, are destroying birds faster than nature can supply the loss. Those who delight in shooting appreciate that a general protective law cannot, in the present state of public sentiment, accomplish for the game the results desired, unless it is backed by private effort and private means, and so we hear every day of the forming of shooting clubs, the purchase or perpetual leasing of desirable grounds, and the stringent and efficient protection of such properties. How many organizations of this description there are in this country it would be hard to say, but it is certain that their number is constantly on the increase. A time will come, and we do not regard it as in the very distant future, when all the available shooting properties on the Atlantic coast will be taken up by private organizations; and when that is done, the interesting question will arise as to what the general sportsman, the non-club member, is to do for his shooting. It is perfectly clear that we cannot, with any color of justice, complain of a man because he desires to preserve the shooting on his own property for himself or his friends. No cry of "monopoly" or "aristocrat" will appeal to the hard common sense of the American people. The shooting clubs have been forced in self-defense to take this action, have been obliged to purchase and preserve land by the increasing scarcity of game, and we all know to what that must be attributed. You cannot eat your cake and have it, too. It cannot be doubted that a wise system of game laws thoroughly enforced and backed by a public sentiment, which would induce each man who shoots to restrain his desire to kill, and to limit himself to a certain number of days' shooting each season, would do much to increase the supply of game, but it is idle to hope for any result of this kind under the existing condition of things.

We may prepare ourselves, therefore, to see the fowl and shore shooting gradually taken up, and when that unhappy end is accomplished, it will be in order for us, like the ingenious correspondent who a week or two since spoke of "beating his dogs and his fishing tackle into plowshares," to fashion—well, say our gunning skiffs and rubber boots into pruning hooks, and devote ourselves on dry land to the pursuit of the ferocious sparrow and the hunting of the night-disturbing grimalkin.

NESTING PIGEONS .- A correspondent asks why it is improper to kill wild pigeons in their breeding season. It is proper, and, in fact, just the right thing to do, if it be expedient to carry on the work of exterminating these birds. The practices and principles advocated by "Backwoodsman" are just those which are responsible for the scarcity of the pigeons he complains of. Pennsylvania is not the only State where wild pigeons were formerly abundant in the fall, and where none are now to be found at that season. The simple reason for this is that the birds have been for years harassed and killed by wholesale in the spring of the year. It is contrary to the teachings of nature and common sense to systematically kill any kind of game in its breeding season. If stock growers should adopt in their business the principles advocated by spring pigeon shooters, they would go into swift and sure bankruptcy-the whole kit of them,

MATCH PREPARATIONS.

TIME is passing on rapidly and we are, at the end of May, without much showing of the American strength in the matter of the International Match. It may be that there is a quantity of practice going on in various quiet corners here and there over the country, but as 1,000-yard ranges are few and far between, we do not give much credence to the stories of preparations in a dozen or more States. On the other side there is an abundance of time for preparation, and besides they have the advantage of the great Wimbledon meeting, where a choice can be made in a few days of as strong a team as Great Britain is likely to produce.

So far as the National Rifle Association has any official information there is next to nothing going on in the way of getting ready to meet the coming visitors. There is an abundance of "private correspondence" flitting back and forth until it would appear that every insignificant letter of inquiry which is sent to the association becomes at once a personal note. The fact remains, however, that our progress is not at all marked. The talk of the guns that were building to do such great work at 1,000 yards seems to have had an outcome only in the bursting of one of the altered weapons in the hands of a contestant at Creedmoor. The best score yet made in the preliminary match at Creedmoor was by a rifle which was used in a similar way before the first International Irish-American Match.

It may be that there is a holding back in certain quarters to see what the chance of victory is, and what opportunity there is of securing a place on the team before aspirations in that direction are acknowledged. Such caution is foolish, since the best men are to go upon the team, and the best can only be singled out after the comparative tests in simultaneous practice. It had been better in some respects if the home or central association had kept itself better posted as to the doings of the men who may be eligible to places on the team. A report from California would be interesting at this time as to what Captain Burns and his men are to do in relation to Massachusetts seems to be holding aloof, while Captain Stetson ought to be at the work of preparation down in Connecticut. New Jersey and Pennsylvania have excellent ranges, readily accessible, and there is no reason why they should not have the placing of some members on the team.

It is about time that something in the way of reports of progress made should begin to come in. We want to see the team a representative one, and not made up from among a limited number of regiments which make Creedmoor their place of practice.

THE OTSEGO LAKE CLAUSE.—The citizens of Cooperstown, New York, have spent much time and money in an effort to restock Otsego Lake with choice fish. There is every reason to believe that these efforts will in a short time be rewarded with a brilliant success, provided the lake can be protected from the ravages of a few selfish men. The people of Cooperstown are almost unanimous in their determination to give the lake this necessary immunity from gill-nets. If a vote of the town should be taken to-day, not fifty out of the 1,100 would vote in favor of the use of gill-nets in the lake at any season. Yet one E. W. Thayer, a hotel proprietor at Otsego Lake, falsely represented to the Sportsmen's Convention at Albany, last March, that the Cooperstown people wanted the privilege of putting gill-nets into their lake in July and August. By his dishonest representations he induced the framers of the proposed new law to insert a clause permitting this use of gill-nets in Otsego Lake. He did this because he wants to serve fish to his hotel guests. It was pure hoggishness on his part, and in direct opposition to the public interest. The people of Cooperstown are very indignant at the thought that by this clause in the proposed law the State of New York shall legislate away their rights to satisfy the outrageous demands of this hotel proprietor. It is to be hoped, now that the facts are known, that this injustice may not be done to the people of Cooperstown and Otsego county. Another clause of the proposed game law permits the shooting of ruffed grouse in Otsego county in August, a time when it is forbidden in every other part of the State. This clause was also introduced because of the false representations of the same party that such was the desire of the sportsmen of that county. On the contrary, not a single sportsman there indorses the measure. They are all opposed to it. It was proposed by Thayer solely in the interests of himself and his pot-hunters. To make it the law would be gross injustice to the reputable citizens of Otsego county.

Dr. J. A. Henshall has just returned from a five months' soiourn in Florida.

THE PROPOSED GAME LAW.—We give elsewhere a synopsis of the open seasons provided by the bill now before the New York Legislature. The bill itself is very long, very complex, and in many of its provisions very unsatisfactory. If passed, it will not in our opinion be much of an improve ment on the present law. The provision specifying that the game protectors appointed by the State shall reside during office in particular counties, where they can do some good, is a wise one. There is much in the bill that is obscure, and, if made a law, liable to defeat the ends which should be attained. We have elsewhere referred to two sections which are grossly unjust to the people of Otsego county, and which should be stricken out of the bill. There are other sections that could be spared to advantage. Section 35, which we give in full, allows too long a market time after the close of the season for the game birds detailed in it. Ten days at most are enough for all the legitimate market demands; the only proper thing to do, in fact, is to stop the sale of game when the season for killing it ends.

OYSTER CULTURE.—We commend to the attention of fishculturists the paper of Professor Ryder on oyster culture, in another part of this journal. After a man has solved problems, they appear easy to others; and of all the problems that have been solved by fishculturists and ended in success, there has been none like that now engaging the attention of Professor Ryder. The minute eggs and embryos, with which he deals, necessitate the finest of filtering material, which immediately clogs with sediment; and he is baffled in his attempts to catch the microscopic embryos and afford them a lodging before they perish. That he will succeed we believe, and also that a triumph in this line will exceed any triumph yet achieved by fishculturists, because the difficulties are greater.

RULES WANTED .- Again and again within a short time past we have received complaints of the difficulty of getting copies of rules for rifle practice from the National Rifle Association. There are many shooting clubs and smaller organizations who adopt the rules and regulations of the N R. A., intending thereby to secure a carefully digested compend of all that relates to the carrying on of matches. It is the duty of a central body such as the N. R. A. claims and strives to be to furnish such a guide, but when the answer is made for months successively that they are "out of print," there is an indication of loose management somewhere.

COLORADO has a State association. This is gratifying intelligence. The gentlemen, whose names we publish as initiating the movement, are well known for their activity in matters pertaining to the best interests of sportsmanship We have the fullest confidence that the Colorado association will be an influential society, and we bespeak for it the sup port of the citizens of the State.

FIRE-HUNTING WOODCOCK .- One of T. B. Thorpe's sketches is descriptive of fire-hunting woodcock in Missis-The plan was to go out at night with a fire pan and kill the birds as they were flushed by the light. It would be interesting to know if this mode of woodcock shooting is practiced at the present day.

FOREST AND STREAM FABLES.

III.-THE UNLUCKY BASS.

ONE day a Bass, feeling somewhat sharp-set for food and Sport, set forth on a trip for both. But it seemed as it there was nothing for him but hunger and disappointment, for search as closely as he would he could not find a minnow, frog, dobson or cray-fish. Even the insects seemed all to have gone to other parts, except one fly that came skimming over the water, and this, dashing his length out of water at, he missed and with shame saw it go buzzing safely across stream. So, unprofitably, he spent the day, and at nightfall turned homeward containing nothing but his empty entrails and his ill-humor. As he sculled along in this unhappy mood he overtook some, and was overtaken by others, of his brethren, and asking of them what luck they had had, all answered that theirs had been no better than his, and in some cases worse except one fellow who declared that he had never had finer sport; but his lank sides belied his big mouth. At this our Bass felt greatly relieved both in mind and stomach, and went home happy though somewhat hungry.

MORAL.

There is no sauce that will so sweeten one's own ill-fortune as the ill-fortune of others.

Camp Hire Hlickerings.

"That reminds me,"

E all sat around the club room after a fair day on the TE all sat around the club room after a fair day on the marshes, when up spoke an old punter: "I saw Mr. M. make the blankdest longest shot, to-day, I ever saw. If te shot from Peach Orehard, while the duck was over Cow Island" (290 yards).

This, of course, was received with astonishment, which was pictured, open-mouthed, on every face. Finally, some one said, rather timidly: "W-e-ll, did he kill the duck?"

"Oh, blank no," said the man, "he never touched the duck."

The fearful strain was relaxed. No-Name,

["No-Name" says: "Why cannot we have a column of
short, pithy stories, jokes and incidents in our sporting life? There are, of course, hundreds of them, if they could only he drawn out. I think that the boys would 'chip in' all over the country." Who is next?]

The Sportsman Tourist.

A SWAMP HUNTER.

BY A. MULE.

A WAY down in Mississippi, in the recesses of the great swamp, lived a great man. Great because success is the only criterion of ment, and he succeeded in all he undertook. There, many years ago, had he bought a hundred or so acres of land, and there, upon the banks of a beautiful bayou, had he pitched his eabin, cleared space enough to furnish corn and pumpkins, and commenced a long war to the knife upon the game around him in the mighty woods and dense cancebrakes.

knife upon the game around him in the mighty woods and dense canebrakes.

Like himself, his wife had but few artificial wants. The 'patch,' only half-cultivated, yielded bread, vegetables, and cotton enough for coffee and tobacco; the busy loom of the good housewife supplied the clothes necessary, while the woods furnished fruits, meat and skins. Here, then, have they lived for forty years in health and peace. What more can man have to make him happy!

Our friend is no holiday sportsman—he does not dress so neat nor smell so sweet as a waiting gentlewoman—but a stalwart frame of six feet, muscles thin but hard as iron, a keen hawk-eye, and the ruddy check of perfect health complete the picture of a thoroughbred swamp hunter.

But though he has killed, of course, thousands of deer, wolves, and wildeats, and trapped other thousands of ofters, beavers, minks, and coons, yet these are but trifies light as air, serving to fill up an idle day or to send for barter to the Landing. His real business is bear hunting, for in this way he provides his "meat."

Now, bear hunting may be fun to some men, but it is cer-

beavers, minks, and coons, yet these are but truites ngmt us, air, serving to fill up an idle day or to send for barter to the Landing. His real business is bear hunting, for in this way he provides his "meat."

Now, bear hunting may be fun to some men, but it is certainly death to many dogs; hence, upon riding up to his comfortable and neat cabin, a wilderness of dogs, "both mongrel, puppy, whelp, and hound," rush headlong upon the traveler, each yelling his best and seemingly frautic with desire to "claw up" the stranger at once. It is plain to see that Shelby Me——raises his own dogs.

Of course he is hospitable to excess, and nothing pleases him more than a visit from a friend in any senson, but especially in "bar time." Often, though, he will load up his horse with necessary articles, blow up his dogs, and be off on a camp hunt by himself for a week. These trips always result in plenty of meat; and it requires several loads to bring home the results of his solitary campaign.

Bear hunting in the swamp has been too often described to repeat the details here. Every man, however, has certain ways of doing some things. The "personal equation" belongs also to bear hunting. Hunting so much by himself, Shelb, has not much relaince upon the system of stands. To head off the game, to divine its course and watch its coming, and finally, when the despairing beast has turned to bay, to dash through briars, vines, cane, and the thousand difficulties of the swamp with a startling velocity and determination—this is his practice.

the swamp with a starting velocity and determination—this is his practice.

He knows his entire section of country better than any book, and every bayou, brake, pass, and ridge is as familiar to him as his own fields. Consequently he has a tremendous advantage to begin with. His weapons are the army revolver and long bear knife; a gun would be both heavy and awkward in the canebrakes.

Biding into the woods of the head of his miscellanguage.

awkward in the canebrakes. Riding into the woods at the head of his miscellaneous pack, which soon disperses on all sides, he listens for the voices of a few steady old start-dogs. These he has trained so they only open on bears, and very rarely deceive him. As soon as their deep notes give warning of a seent, the whole pack make for them, well knowing the character of the veterans. When the "burst" tells that the game is afoot and away, he takes out a map of his own make, and with a pocket-compass carefully notes the probable course of the chase, and, as a scaman would say, "takes his departure." To this sort of coolness and science is due his great success as a bear hunter.

as a bear hunter.
Once fairly started before old Shelb, and his wild pack

chase, and, as a seaman would say, "takes his departure." To this sort of coolness and science is due his great success as a bear hunter.

Once fairly started before old Shelb, and his wild pack, there are few things will save that bear. Through mud, water, cane—every obstacle—on horseback, on foot, or even on hands and knees, he follows the panting beast to the final bay of desperation and death. Once he crawled two miles on all fours through a brake after a bear, and, as he told me, "had to lap water like a dog as he crawled through it."

One time there was a great deer drive gotten up, and one of the party was a city greenhorn. While engaged deep in the drive, Shelb, suddenly broke away and struck off like a quarter-horse for a mile. It seems he thought be heard a bear killing a call'; but it proved to be the green one trying to blow his horn! Old hunters will appreciate this.

Shelb, had a brother-in-law who was deaf and dumb. He paid the old fellow a visit, and was anxious to join in a bear hunt. Of course this was like falling off a log in that neighborhood, and next morning they started. After a long chase the bear was brought to bay in a very dense thicket of bamboo and cane. Of course, seeing was impossible, but all the sounds of a terrific fight came out of the dense mass, and the dogs were evidently getting the worst of it in such close quarters. The only possible entrance was where the dogs and bear had left behind them a sort of tunnel about a foot wide and two long. So Shelby took the deaf man's slate and directed him to shove at his (Shelby's) legs, and thus push him through the tunnel But on getting his head through, he discovered that the bear had killed all but two of the dogs. These were lying whipped under the cane, and the old he, with savage eyes, was anxiously awaiting the appearance of his new foe. Shelby now wished to retreat, and yelled to his pusher to pull him out. But alas! devoted to duty, the deaf and dumb strained every nerve to push his charge through the lole. In vain the hunte

This will seem odd to those persons who consider the great Mississippi bottom as practically one vast snake pasture; but there are many facts to take the edge from the wonder that a man afraid of snakes should live there. In the first place, where both parties are anxious to avoid each other; it is easily done, and snakes are as afraid of us, as we of them, while in point of fact there are not so many snakes here as our Northern friends suppose. The writer has lived all his life in the Southern States, and almost constantly engaged in jursuit of game, yet has never seen a rattlesnake alive in the woods. Not that snakes are absent, but they are not so abundant that one can be seen at an hour's notice.

But the old hunter fairly shuddered when he saw a snake, and would leave his kuife sticking in a bear in order to destroy one of the reptiles.

On one occasion his dogs had treed something at a distance, and on coming up he found it to be a large wild cat. The tree was not tall, but had a thick cluster of leaves near the top, from which the demoniac face of the cat looked out upon his enemies below.

top, from which the demonate face of the cat looked out upon his enemies below.

Wishing to get a better shot, the old man was moving around the tree with eyes fixed upon the cat, when he suddenly felt his legs gripped with a band of steel, and looking down, saw that he had stepped upon a large blacksnake, which had coiled around both legs just below the knees! The man fainted and fell, but the last thing his failing senses saw was the cat leaping on him from the tree in a paroxysm of fury! of fury! Was ever such a fix?

of fury!
Was ever such a fix?
When he recovered, he was alone; the dogs had run the cat away, the saake had uncoiled and gladly slipped off; and of the adventure nothing remained worse than a sickness at the stomach and greater fear of snakes than ever, "Befo' the walh' the old man had a nigger that came nearer owning his master than otherwise; and Jack never got a thrashing but once. The bears had been making sharp raids into Shelby's patch of "roastin' years," and he resolved to watch for them. Just before dawn he placed Jack at a corner of the fence, with strict injunctions not to stir a foot until his master returned. In the meantime, Shelby crept well into the field and sat down among the corn. Just as the gray dawn began to lighten the fog, he heard a rustle among the green blades, and saw a large, dark mass moving stealthily by him. Hastily bringing his gun up, he fired, and bagged his unlucky nigger, who howled to the world to save him. Fortunately, the charge had missed in the dim light, and the man was no worse than scared. But while Shelby was equally frightened, he was also enraged, and baring the unlucky nigger he gave him all he would bear.

A CHEAP TRIP TO THE ADIRONDACKS.

A CHEAP TRIP TO THE ADIRONDACKS.

INTENDING to spend two weeks in visiting some of the beautiful rivers and lakes of the Adirondacks, your correspondent made his way to Saratoga, which he left at 9, 15 A. After traveling by rail through a very uninteresting country, for about an hour, we had a good view of the Hudson, the left bank of which we followed for about twenty miles, till we saw it as the merest creek. Before the starting of the stage that was to convey us from North Creek to Blue Mountain Lake, we had an hour for dinner, which can be obtained for 75 cents at a little hotel opposite the railroad depot. As there was a large number of passengers, some had to be conveyed on "buck-boards," which is said to be much the easiest mode of riding, while the stage company's gentlemanly superintendent, Mr. R. B. Scarrett, determined to drive the coach himself. I, however, to secure an extended view of the conntry, had engaged a top seat; and as I found Mr. Scarrett willing to answer any number of questions, and anxious to make the trip a pleasant one, was very glad that I had done so. While crossing one of the ranges of foot hills, the horses had "some heavy pulling:" but once on the other side, we had a splendid view of the great peaks, Mount Marcy, Blue Mountain, etc. At Jackson's Hotel we changed our stage for a lighter one, and entered the great North Woods, that stretch away in one vast wilderness to the St. Lawrence. Between Jackson's and Blue Mountain Lake, not a single house is to be seen. Even the log "camps" are not inhabited. It soon grew dark, and on coming to a turn in the road we found that it lay through a portion of the forest that was on fire. The flames were all around us; but having seen that our driver was careful and knew his business well, we took it quietly and passed in safety on. Before reaching Blue Mountain the road were that throughout this region. I found the charges were nearly the same; \$10 per week, \$2 per day, or 50 cents for single ments, well cooked, well singular the reacher wit

enter civilization" by the Saranac Lukes instead.

On Monday morning I hoisted my sail and took a trip round the lake, wondering as I went if any of the Adirondack lakes could afford finer scenery than that. With the exception of Lake Placid in the north, which I shall speak of later, I have not seen any one that I admire as much. It is surrounded by mountains, and so dotted, here and there, with islands, that altogether the picture presented is very beautiful indeed. One of the prettiest of the islands is owned by a Mr. Thatcher, of Albany, who has built a charming log cottage, boat-house, etc., and as it is covered with tall pine timber, it strikes one as a perfect little paradise. There is but

one drawback-a serious one to sportsmen-there is no

one drawback—a serious one to sportsmen—there is no fishing.

On Monday afternoon, with a companion, I climbed Blue Mountain, 3,762 feet above tide. The upward path is good, though in some places pretty steep. After a walk of three and a half miles, during which I shot a fine partridge, we reached the top. It is an isolated peak, and when we had climbed up a dead tree, on which cross-pieces had been nailed, what a glorious prospect met our gaze! Far to the west, beyond the Eagle and Utowana lakes, lay the fair "Queen of the Adirondacks," Racquet Lake, looking in the brilliant light of the setting sun like a sea of molten gold, while to the north, almost under my feet, was the inlet of Long Lake, and in the distance Tupper's Lake; but turn which way I might, no "clearings" could be seen—there was only the great pine forest, dark and gloomy, stretching far as

which way I might, no "clearings" could be seen—there was only the great pine forest, dark and gloomy, stretching far as the eye could reach. I began to feel less disposed to continue my journey alone than I had done before. As it was growing dark we did not visit the east "outlook," though it is said to afford the threst view.

On Tuesday morning I left Blue Mountain Lake for the Racquet, and, as there was a fair wind, made very good time in sailing through Eagle and Utowana lakes. Eagle Lake, though only one mile in length, is very pretty. It has one farmliouse and some cleared land upon its northern shore, but that is all. Utowana Lake is three miles long, but entirely surrounded by forests. About a granter of a will shore, but that is all. Utowama Lake is three miles long, but entirely surrounded by forests. About a quarter of a mile down the outlet is a large dam, which has raised the water so that the little steamers owned by Dr. Durant can pass from one lake to the other. They form a regular line, and carry passengers from Bhe Mountain to the dam. Thence wagons take them about three-quarters of a mile to the wharf of the Racquet Lake steamer on the Marian River. Boats are carried over for 50 cents apiece. The Marian River is the largest feeder of the Racquet. Before the advent of steam, deer were often seen upon its banks; a few were seen from the steamer's deek this summer; but such a thing is by no means common now. In a direct line the river is hardly three miles long, but its course is so winding that it is five miles in length. Were it not for the travel, the deer hunting means common now. In a direct line the river is hardly three miles long, but its course is so winding that it is five miles in length. Were it not for the travel, the deer hunting would be very fine. The forest is so dense that even on the little steamer the trip is very pleasant. I entered the Racquet about 5 P. M., and made direct for Bennett's house, where I, too, found the entertainment "thoroughly satisfactory." Being adjacent to some good hunting grounds and exceedingly pretty withal, it has become a place of great resort; its bass fishing especialty is excellent. On Wednesday morning I walked across the point to the summer residence of Dr. Durant, which consists of several los houses

resort; its bass fishing especially is excellent. On Wednesday morning I walked across the point to the summer residence of Dr. Durant, which consists of several log houses, well built and handsomely furnished. During the afternoon I sailed over to an island lying between Bennett's and Osprey Island on which a pretty little Episcopal church has recently been creeted. It was consecrated Sept. 12, 1880, and I was told that, when the bell began to ring, there was instead of horses and carriages coming down a road, any number of little row boats making for the island from every quarter.

On Thursday at 7 P. M. I set sail for the lower end of the Racquet. Near the end of the lake I accidentally ran onto a sunken rock, and, as the wind was pretty fresh, my rudder was torn from its fastenings, and I was compelled to steer by an oar for the remainder of my little voyage.

I now come to the really troublesome part of my trip. The only way of reaching Forked Lake was by a half-mile carry and the steamboat landing and Leavitt's Hotel on "the Forked;" and being alone was compelled to carry my boat over on my back, and take two extra trips for my baggage. This as it proved was my way of getting over every carry. Having put my boat on Forked Lake there are three "carries," one of two miles and the others about half a mile each in length. It was nearly 3 P. M. when I began what proved to be a long, tedious tramp; for by the time I had taken overwhing over I had walked to make and it outlet, between which and the inlet of Long Lake there are three "carries," one of two miles and the others about half a mile each in length. It was nearly 3 P. M. when I began what proved to be a long, tedious tramp; for by the time I had taken everything over I had walked ten miles, and it was six o'clock. On my way I met three gentlemen with their guides, and almost envied them the comfort of having to make one trip only. After stowing my baggage in my boat, I rowed down the Racquet River for about a mile to Ruttermilk Ealls where the second carry begins hut it soon Buttermilk Falls, where the second carry begins, but it soon became dark; and as the forest through which I had to pass was on fire, I veluctantly turned my boat up stream to a little island that I had passed and resolved to spend the night on

that.

I therefore dragged my boat ashore, fastened the canvas deck in its place, covered the whole with the sail, crawled inside and made myself comfortable, much to the displeasure of a host of hungry mosquitoes, who missed a good meal thereby. They, however, sang in full chorus till I fell quietly asleep, and for aught I know a good while after. Next morning I caught some fine trout, which I cooked on embers left by the fire which had just swept through the forest, which I had avoided the night before. During the morning I saw great numbers of my little friends, the red squirrels, that were scampering and chattering in every direction round me. Certainly no one need starve there. I passed over the other two carries in safety; but not without emphasizing a mental resolution to avoid all carries alone in future. It was with a sense of great relief that I sailed out into Long Lake, and saw farm houses and cleared land once more. It is a beautiful sheet of water, about fourteen miles in length, reminding one of the Hudson with its hilly shores; and when, after passing Kellogg's Hotel at Long Lake village, I had a distant view of Mount Seward, I could easily imagine that I was above Poughkeepsie, looking at the Catskills.

While still some distance from the Island House, at the I therefore dragged my boat ashore, fastened the canvas

While still some distance from the Island House, at the While still some distance from the Island House, at the lower end of the lake, I was overtaken by a thunder storm, and night coming on soon after, I was left in total darkness in the middle of the lake; but the good hotel keeper, having seen me in the distance, put "a light in the window for me," and so guided me to the house. After a wonderful supper of pickerel and venison I turned in, feeling well satisfied with my day's work, and especially with its cheerful ending. The next morning all traces of the storm had disappeared; and after breakfast I sailed one mile to the outlet, and continued my journey down the Racquet River. Pretty soon I came across a hunting party in four boats, run on the shore some distance from each other. They begged me to go care-I came across a hunting party in four boats, run on the shore some distance from each other. They begged me to go carefully and keep my gun "handy," as their dogs were running deer. While they were speaking, I heard the distant cry of hounds, and felt sorely tempted to accept their invitation and join the sport; but I was anxious to reach the Saranacs that evening, so kept on my way. Soon after I heard a rifle shot up the river, which I suppose meant a dead deer. About eleven, I came to Johnson's carry opposite a burnt knoll, and had my boat taken over on a sled. Sportsmen could take their boats over on their own backs if they chose; but as the carry is a mile and a half round the rapids and Racquet

Falls twenty-five feet high, they generally prefer to pay down the cash instead. On the way over I fell into conversation with the boy that drove the horse and with Mother Johnson's

with the boy that drove the horse and with Mother Johnson's grandson—a nice little fellow about eight years old.

They told me they carried over from fifty to 100 boats per week at a charge of \$1.50 each to sportsmen, and \$1.00 to guides, making a snug little income for the backwoods. The farm house, since Mother Johnson's death, has been occupied by a married daughter and family. It has no owagon road whatever to the outside world; the only way of reaching the village being by a boat ride of seventeen miles, while the nearest neighbor is seven miles the other way. Should any of the family become seriously ill, I fear the doctor might find him dead, if not buried, on his arrival. A little further down I caucht a very large pickerel, and am doctor might and him dead, it not buried, on his arrival. A little further down I caught a very large pickerel, and am told there are a great many in several parts of the river, as well as at the head of Long Lake. I was delighted with the beauty of the forest that lined its banks, with occasionally a lovely natural meadow, that almost made me look for a farm house, though I knew that I was far from anything of the

house, though I know that I was fur from anything of the kind.

After a tedious row I reached Calkins' house, from which a very good view of the upper Saranac Lake can be obtained. On Sunday morning, sailed two miles to Bartlett's house, where there is a short carry to Round Lake Inlet. Here I took a young man on board, and with him sailed down the Saranac River to the lower Saranac Lake. I reached Martin's, at the upper end of the lake, about 2 P. M., having sailed about 100 miles since leaving Blue Mountain. Here I packed my boat in its canvas trunk, and expressed it to Plattsburg, while I prepared for a tramp of sixty miles to Lake Champlain. Next morning I walked to the Ray Brook House, and in the brook which runs through the property and is free to all the guests, I caught thirteen big fellows in less than an hour. Several of them weighed a pound and a half. I never saw such trout fishing in my life. The fly would hardly touch the water before a hungry fish would seize it. At dinner I was agreeably surprised to find Mr. S. B. Mills, the well-known planist, who was preparing to try his luck in the brook. Near the post office, six miles off, I witnessed a sunset, that with the light and shade on Mount Whiteface and the great range was magnificent indeed. Next morning I walked to "old John Brown's grave," saw "the stone he loved so well," and listened to the widely different opinions which the country people expressed respecting him. Some called him "an old fanatic," while others praised him highly. About 9 I reached Lake Placid, climbed a hill near by—a signal service station, and looking toward Mount Whiteface had a view of lake and mountain that I shall never forget. Lake Placid is five miles long, and contains two large islands.

During the summer season the pretty little steamer Mattie that I shall never forget. Lake Placid is five miles long, and contains two large islands.

During the summer season the pretty little steamer Mattie

and contains two large islands.

During the summer season the pretty little steamer Mattle makes regular trips. At the other end of the lake I took a trail three miles long to the summit; the first two miles I walked in three-quarters of an hour, but the last took me full two and a half hours. I should not advise ladies to attempt it, for the ascent becomes almost perpendicular as you approach the top. The pines that are so large at the foot keep dwindling down to little bushes, till for the last 300 feet, there is nothing but the bare, bleak rock. The mountain, being cone-shaped, the view is probably the finest in the State. On a clear day the St. Lawrence, eighty miles distant, is distinctly to be seen; eastward, over Lake Champlain the White Mountains are visible; while to the south and west are the great Adirondack peaks and part of the Luke region. When I reached the summit I found three boys who had ascended the Wilmington trail which, though six and a half miles long, is much the casiest way, the path being so good that horses can be used to make the trip. A trail from French's Hotel is about the same in length; but not, they told me, by any means as good. Near the summit were plenty of huckleberries, and on the way down, the boys shot two nice partridges. I spent the night near Wilmington with a most hospitable farmer; visited Ausable Chasm the next day, then took the train to Plattsburg, went on to Montreal, and thence returned to New York, delighted with my journey as a whole.

next day, then took the train to the work, delighted with my treal, and thence returned to New York, delighted with my journey as a whole.

I might here offer a few suggestions to young men who think of spending a week or two in the wilderness. If two or more wish to visit the Lake region, they would do well to buy an excursion ticket from New York via the Albany or Troy steamer to North Creek for \$10. Stage fare from North Creek to Blue Mountain and return, \$5; ten meals between New York and Blue Mountain and return, \$5; use of rowboat for two weeks, \$6; if divided between two, \$3 each; rations for each man for ten days, ten pounds of hard tack, two pounds of butter in tin pail, two pounds of salt pork, one can of preserved corned beef, one of condensed nilk, coffee, sugar, salt, pepper, bottle of pickles, tin plate, pail, cup, and a wire broiler, \$4; powder, shot, two dozen musket balls to use in shotgun for deer, \$1.50; "Stoddart's Adirondack Guide," twenty-five cents; map, \$1; pocket compass, forty cents. Total, \$30,15. With a good dog, you will ind deer enough near the Fulton chain of lakes, or Little Tupper's Lake. If you have a good "bump" for locality, Adirondack Guide," twenty-five cents; map, \$1; pocket compass, forty cents. Total, \$30.15. With a good dog, you will find deer enough near the Fulton chain of lakes, or Little Tupper's Lake. If you have a good "bump" for locality, you won't get lost; if you have not, don't trust yourself, but hire a guide at \$3 per day, who will furnish a boat for three persons; the extra expense for each, after deducting the \$3 saved in boat hire, will be \$12. Buy all provisions, except butter, in New York. Pack them with rubber coat and blanket, warm underclothing, etc., in a large valise. Take a shawl strap along. Should you wish to visit the mountain, buy an excursion ticket from New York to Westport via steamer and Delaware and Fudson Canal Company's steamer and Delaware and Hudson Canal Company via steamer and Delaware and Hudson Canal Company's Railroad, \$10,80; stage to Keene's Flats and return, \$5. Obtain a haversack and fill it with provisions. A five mile walk will bring you to the Ausable Pond, where you can build a good "camp" and make your headquarters. Thence you can make delightful excursions in every direction.

FISH PARASITES.—Warren County, N. Y.—It has been quite a mystery for years to know what are destroying the fish in several ponds and streams among the Adirondacks. Last summer I investigated the matter. I found several thousand dead fish, and on opening them I found something like a leech wound around the stomach of each one, and in some there were as many as six, tied into knots around the intestines so as to stop all circulation, and causing death. They are white and look like fat with a line through the center like a vein; they are from two to six inches long, and from an eighth to half an inch wide, and from one-thirty-second to one-eighth of an inch thick. After being taken out they will live from four to ten hours. The greatest mystery to me is that they are outside the gut and greatest mystery to me is that they are outside the gut and inside the fish. The question is how do they get there?—ANDREW LACKEY,

MAJOR JOSEPH VERITY.

WHEN game became scarce in the region where I was WHEN game became searce in the region where I was born, I used to make frequent and extended trivs into Adironda, a wilderness which has been made famous by the exploits of a divine whom I have often met there and hunted with. I remember very well having a cance race with him across a certain lake, in which neither of our light craft touched the water once in ten rods. Modesty forbids my declaring which of us won, but my clerical friend gave me credit for being almost the best paddler he ever saw. We had another trial of skill in running up the Phantom Falls, when, as we were abreast, he got the better of me in a rather unfair way, by taking hold of the tail of a big trout which was just then scaling the cataract. I think be tearned this trick of his favorite guide, who was accustomed to catching deer in this way. My reverend friend was very expert with the rifle and no less so with the long bow, which he would draw with any man I ever saw. He prided himself on his skill as an angler, and I once saw him give a trout the butt in a very effective manner. He was casting from a beat and hooked a big fellow, which somehow, after bending the rod into a double circle, got behind him, when he made a vigorous pull, and the fish as it came out of the water, struck him a span below the hinder suspender buttons and fell stunned into the boat.

ons pull, and the fish as it came out of the water, struck him a span below the hinder suspender buttons and fell stunned into the boat.

Speaking of fishing reminds me of an incident of my salmon fishing when by invitation I was enjoying that sport with my friend, the Earl of Brouncrow in the waters of the Restigouche. I had hooked an enormous tish, and followed him in his mad run down stream, over boulders and in the stream sometimes up to my chin, when at last I brought him up to the shore of a deep, wide pool, with my rod upright and the salmon almost at my feet. He then started on a fierce rush straight across the pool, and I, grown very desperate, jumped astride his tail and bore upward and backward upon him with all the strength my tackle would bear. But it had next to no effect as to checking the tremendous speed, and he strack and grounded upon the further shore, which was shoal, with such force that I was thrown over his head and the tree-tops so far into the woods, and was so stunned by the fall, that when I recovered my senses and got back to him, he was quite spoiled, for the weather was very hot. However, I was somewhat compensated for the loss of the fish by finding five others so gorged upon his carcass that I captured them all as easily as one would pick up a nest of young field mice.

I had once a rather singular adventure with panthers in Adironda. I had followed two of these animals for a week without being able to get a shot at them, when at last I came suddenly upon them in a windfall, lying fast asleep; in fact, so exhausted were they that they seemed to be in a sort of lethargy. Close to them was a stout tree, the top of which was bent to the earth by a larger one which had fallen upon it. Across the bent tree I tied their tails together firmly with a thong of leatherwood bark, and then with my hatchet cut the top of the tree free, when the two beasts were suddenly hoisted aloft, and as suddenly awakened, and then began such a cat-clawing and catterwauling as I doubt was never seen or he

batants. At last the sounds grew fainter, then censed, and when the fur had settled. I saw that there were only the two tails with some shreds of skin attached, left hanging to the tree, and these tails were all that I had to show for my week's tramp.

I had many adventures with bears, among which I remember distinctly one when an old she bear with cubs chased me around a monster tree some flitten feet in drameter. I found it impossible to get a shot at her 'fill I gave my gun a smart blow against the tree and bear it so that it conformed to the curve of the tree's circumference. Then I fired low, and on my next circuit found the bear dead, shot through from end to end. But the ball kept flying round the tree and whistled twice past my head as 1 stooped over the bear, when I crawled out of its range on my 'hands and knees. I do not know how long it range on my 'hands and knees, I do not know how long it might have kep's on its circular course if the bear had not come up to smift his dead mate, when it lodged in him and Kided him. These was the only time that I ever killed two bears with one bullet.

I am reminded by this of an encounter which I once had with another she bear near my own house. I set out on foot one morning in spring to cell on my friend, the Governor of our State, who lived some five miles away on the other side of the mountain. The Governor prided himself much on the excellence of his kitchen garden, and greatly desired a certain kind of bean, which, though of no more than ordinary size when dried, would so swell in cooking that a half dozen of them would furnish a meal for a bearty man. As it providentially happened I carried alone a pocket full of these to give him. I took a light fowling piece and some small shot, thinking I might secure some specimens of migratory birds, then on their way to the north, but never dreaming of seeing anything nore formidable than a wood-cock. Suddenly as I was wending my careless way along the woodland path, a huge and vicious she bear rushed out of the fores

Matural History.

ARE THEIR DEEDS GOOD OR EVIL?

CINCINNATI, O., May 5, 1882.

Editor Forest and Stream:

Notes have recently appeared in the papers, alluding to the destruction of game by hawks and owls, and accounts have been given of the work done by associations formed for the destruction of these birds. It appears to be taken for granted that they do great injury to our game without

have been given of the work done by associations formed for the destruction of these birds. It appears to be taken for granted that they do great injury to our game without rendering any service in return. The following, taken from the Cincinnati Daily Gazetle, bears on this point:

"Mr. John W. Shorten then read a paper on "The Relation of Our Rapacious Birds to Agriculture." He referred to the fact that the County Commissioners had offered a reward for 'hawks' scalps,' and went on to state that all ornithologists were agreed that food of hawks and owls consisted more of small animals than small birds and that, instead of being a nuisance and so destructive, they were invaluable in keeping down the numbers of field mice, moles, rats and other small animals of the fields. Letters were read from Dr. Elliott Coues and Prof. Spencer F. Baird, of Washington, in which they stated positively their conviction that birds of prey, commonly considered injurious, were in fact very beneficial to agriculture. In a discussion which followed, Dr. Langdon, Mr. Mickleborough, Dr. Thrasher and Mr. Wm. H. Fisher stated facts corroborative of Mr. Shorten's paper, and it seems to have been the exception rather than the rule to find the remains of birds in the stomachs of hawks and owls. The paper was referred to the Publishing Committee."

stomachs of hawks and owls. The paper was referred to the Publishing Committee."

Perhaps, after all, hawks and owls are not such deadly enemics to quail and other birds as has been supposed. It would be an easy matter to examine the contents of the stomachs of every one killed, and at the close of the year look over the record made, and a number of such reports published in your paper would throw much light on

Gulject.

[Our correspondent's suggestion is an admirable one, and we should very much like to see it carried out. The value to science of such a record, if properly kept, would be very great. Who will undertake to keep one for a year?]

THE MUSIC OF NATURE. Our Wood Thrushes.

BY B. HORSFORD, SPRINGFIELD, MASS.

 \mathbf{W}^{E} desire not the prostration of science, but would strip from it the robe of omniscience, improperly assumed, and

That cold, repulsive skeleton anew would dress.

Then warm it into life and loveliness.

There is not a branch of natural history in which "probablines" takes as wild a variety of the control of the contro There is not a branch of natural history in which "probabilities" take so wide a range as in ornithology, nor one in which the term works such confusion and uncertainty. One man bolts for Florida in the winter, and we are treated to a volume on the birds of that region, out of the breeding season, when food, habits and color are not true for the season.

volume on the birds of that region, out of the breeding season, when food, habits and color are not true for the season of incubation; unother describes northern birds in their southern migrations, and travels wide of addition to human knowledge for the same reason.

It is certainly desirable with this opening season of birds to confirm what is in this paper assumed, if correct, or to confute the same, if erroneous; in any case, to obtain a report from the range of Northern States of any facts which may be gathered by readers of FOREST AND STREAM in regard to these birds. As the matter now stands, there are not three birds in existence on which ornithologists have spent so much time and labor without making one step in advance. Each writer has settled the thrush question forever (in his own mind), while the controversy unfortunately breaks out again the next day as "new varieties" are discovered. Taking advantage of a hull in the discussions, I ask pardon for offering an "opinion," founded on more than half a century of their intimate acquaintance. To do this understandingly I must "dean the board" (a measure justice demands), discarding the long list of synonyms, with the descriptions, which are simply a catalogue of "observations," of which the student will only understand less as he reads more.

of which the student will only understand less as he reads more.

Thave in my possession three wood thrushes whose life and song closed at the same instant, but I am not able to assign the true original name to either, nor have I found a man who could with any authority do so; the reason is that, when together, the description of one applies equally well to the others. The acknowledged variation in length and alar extent is greater in each than they vary from each other. The arrow points on one may be more clearly defined, on a lighter ground, the rump and tail more rufous in color but substantially the same, while the shade of olive from light to dark affords a wide range, in which young ambition has wrought wonders, as two late "discoveries" show. Painful research, some years since, made out a few grayish feathers on the check of one, that the others did not seem to possess; it raised a long controversy of words, in which each party was convinced, each victorious; while the real question at issue, the existence of such a bird, or whether each held the same or a different bird, was left darker than before.

However closely allied these birds may be, twin brothers, seemingly, we yet believe there is marked diversity of habit,

seemingly, we be believe inter is marked unvesity of many, which must be considered under the designations of No. 1, No. 2, No. 3.

No. 1, pulest in marking, and hence comes Tawney Thrush, builds her nest on a stump or tussock twelve to eighteen inches from the ground; is found mostly in low, damp covers, among the willows near the water; on being disturbed flies a few feet, but never alights on the top of a tree

these birds hop alike, fly alike, feed alike, and are so nearly of the same shade of color that only an expert detects a of the same shade of co

difference except in hand.

The main question therefore remains. Is there not some mark or token by which these birds can be distinguished by common observation from each other, a consummation most desirable, and which ornithology, with Gunter scale and microscope, has failed to reach.

With strong conviction that there is such a distinguishing character, let us examine their powers of song, not by comparison with the notes of other birds, for as songsters they stand alone, but placing them side by side and judging of them on their personal merits only.

This bird you see runs up, then down the scale and repeat, then the same, making the upper turn a semitone lower. It is a perfect quiver of clear, distinct notes, and most likely from habits, and surroundings of the species takes on during a dark rainy sunset a sad and melancholy character.

SONG OF NO. 2.

No. 2 sings three loud and clear notes, and at intervals repeats, changing from Major to Minor, then returning to Major, then breaking off to a shure-re or gutteral, with an occasional wut-wut, wut-wut in the intervals. This bird never sings at rest, but three notes, then hopping along the branch; three notes, then flitting to a branch more distant; branch; three notes, then fitting to a orance more custant; three notes, then perhaps to another tree; repeats again and again the simple melody which can never be mistaken for another bird. The Minor and guttural bars may vary slightly, but the Major bars do not. Under any other conditions this repetition would become wearisome, but such is the purity and sweetness of tone of this bird's song that one may listen to it for hours and regret its close, and welcome explicit to hour it again.

may insten to it for noise and regret its crose, and welcome spring to hear it again.

Some years since, a pair of these birds took up their abode in our cemetery, which is on the highest river terrace. I saw them during two successive seasons of incubation. The male sang finely. The pair raised their young undisturbed, and the part of the pair raised their young undisturbed. Some years since, a pair of these birds took up their abode in our cemetery, which is on the highest river terrace. I saw them during two successive seasons of incubation. The male sang finely. The pair raised their young undisturbed, but the march of improvement soon cleared up the underbrush, and the male preceding the female in the spring, found the covers all gone and at once commenced to search for another home. He lingered a day on Chestnut street, an intermediate terrace, and then came to Court square, a lower terrace some twenty-five feet above the river. Here, among the branches of the great clms, he found cover and a deep shade, while the walks exposed every worm or insect to appropriation as they passed from one green plot to another. Here our bird took up his abode and began to pour out his music, awaiting his mate. But alas! he was off the track of migration, and far beyond hearing distance of the cemetery. He continued to sing and wait, and wait and sing, until attention was drawn to him and questions multiplied. What bird is this? where did he come from? where is the nest and mate? I replied: He has neither mate nor nest—will have none. We are on low lands near the river, where the bird seldom goes, and too far from the cemetery for his mate, if she lives, to catch the sound of his voice. And so the summer passed away. He sang a whole month beyond the usual time, simply because he had nothing else to do. Herew familiar with human society, as general interest in his welfare increased; just as the whole realm of warm-blooded organic life does, where the calls of nature are supplied and no injury inflicted. Early in September he disappeared, and the question was often repeated, Will he come back again? My reply was, He will come. The wants of nature are better supplied here than elsewhere, and his reasoning faculties will hardly reach the cause of his celibacy.

May came round again; and on a lovely morning, the 8th at survise, his song brought a dozen friends to Court square, who at the middle of h

thermat contact that the place, and never returned. I heard a few faint farewell notes in an adjoining street the following day, but the pleasing story was ended.

SONG OF NO. 3.

This commences with a semibreve note, and runs through all its subdivisions with increasing rapidity, and is lost far beyond demisemiquavers in that metallic tinkle of the highest octave of the piano or music box, and is really inimitable by any other instrument. Taking, first, perhaps, the keynote of G, it sings through on that, then changing to C repeats, then perhaps A, then changing to E, then striking back to B, then G above, then C above that, and then dropping by the same gentle undulations to D below the staff. In all these modulations there is nothing harsh or abrupt; you cannot tell from one keynote what the next will be; but such is the purity and sweetness of tone that it matters not, the bird seems to float at will over two octaves of the musical scale, inimitable and unapproachable by any living songster, and alone entitled to the crown Imperialis. I give it.

A man who knew whereof he spoke, singled out at sight or bush.

No. 2 is largest of the three, lighter breast, the arrow points sharply defined; builds her nest eight to twelve feet from the ground; is found on high terraces above the river, on the border of ravines; like No.1, strictly arboreal in labits, but never alighting on the top of tree or bush. I never saw one north of Massachusetts.

No. 3 has a wider range and of course a greater variation in its markings than the others. Peculiar to the white pine belt whitel crosses the continent, the bird is found over its entire distance, and is known at his best only where that tree shows greatest perfection. The nest is built on the ground scooped from the surface, in open woods skirting mountain pastures and hillsides, often under an overhanging mountain pastures and hillsides, often under an overhanging stone or bush several rods from cover. And yet, after all,

Here I reached what I had sought in vain many years, a note of the so-called Olive Back Thrush, and with it the species faded out entirely, following others which had gone before

The question might well be asked, Why is this "bird of Paradise" so little known? Simply because its history has not been written in the latitude of its fullest development, and is thus ever at fault. Any attempt to write it south of the north line of Massachusetts will be, as it ever has been, a failure for that reason. I said the bird was peculiar to the White Pine region, and deteriorates in character and song just as that tree does with change of climate.

On the Connecticut River, midway in Vermont, was my birthplace. In the past year I obtained there one year's growth of the white pine forty-two inches in height. This I consider the central latitude of the tree in New England, since 100 miles south the quality is inferior, while at the same distance north it is lost in the cooler forests of balsam and spruce. question might well be asked. Why is this "bird of

Breeding of the Carolina Rail in North Carolina.—Horse Cove, N. C., May 7, '82.—Editor Forest and Stream: On Thursday, last week, while plowing for corn, my man called me to come and see a bird—a new one, to him. I at once recognized it as an old friend, a genuine Carolina rail. My wife being quite sick, I shot it for her. The bird was a male and quite fat. Yesterday I shot another, a female, in which, while cleaning, were found quite a number of eggs. This bird was as thin as the other was fat. They were evidently mates, and I was sorry I had killed them. But what were they doing up here in the mountains? I am in the extreme southwest corner of the State, over 3,000 feet above sea level, and entirely surrounded by mountains. Is it usual for the rail to seek high places for nesting, or may these have been blown in by a storm? I am aware that very little is known of the habits of these birds off the marshes; may not my discovery furnish a missing bink? Pheusanst are to be heard drumning on all sides. I predict a good season for all feathered game in this locality this season.—CLIFON. [Elevation often takes the place of latitude in the distribution of birds, and it is not very surprising to hear of rail breeding even in North Carolina in the mountains. We think that a little thought would have told Clifton that birds in North Carolina are breeding or ready to breed in the month of Muy.] month of May.]

Fish Poisoning.—Some three weeks since, having occasion to clean a small piece of brass, of not over an inch square surface, I put it for a few moments into a solution of bichromate of potash, then dipped it into a pail of water to remove the acid. I then three out the water and used the pail to bring one or two pails of water for other purposes, and then brought a couple of pails of water for my aquarium—the next morning my fish were all dead. Some twenty years ago a friend of mine bought a quart of acid to experiment with on some iron, but failing in his anticipations he offered me the acid. I told him I had no use for it, and considered it a dangerous liquid to have about, and we concluded to throw it away. We threw it into a little wet place where a little days I noticed that all the fish in the brook were dead, and saw quite a number of trout, chubs and eels on the edges of the brook dead. Others noticed it and a physician said it was the acid that killed them. One other instance: I saw a large number of perch, suckers, eels and shiners that lay dead all along a river below where a man had poured some acid which had FISH POISONING .- Some three weeks since, having occa-

number of perch, suckers, ecls and shiners that lay dead all along a river below where a man had poured some acid which had become useless. From what I then saw, taking into consideration the quantity, I think a carboy of acid would destroy all the fish in a hundred acre pond, and while it is not probable, is it not possible, or might it not be possible that the wreck of some merchantman, loaded with chemicals, has been the cause of the great mortality among the tile fish spoken of in your paper? I would like to read items from the experience or observations of other parties on this matter.—G. F. W.

"MOUNTAIN, LAKE AND CATARACT."—This is the very attractive title of the very attractive summer book describing the very attractive resorts on the very attractive Eric Railway, and other roads. The book (advertised elsewhere) is a handsome one, and contains a vast fund of information.

Game Bag and Gun.

HUNTING EXPERIENCES.

SOME OBSERVATIONS UPON DOGS, ET AL.

NEARLY all the correspondents of the Forest and Stream, who have written on the subject have spoken of the scarcity of quail during the past season. In this section there were plenty of birds in the spring to stock it fully, and as the weather during the nesting and rearing period was apparently well suited for it, our sportsmen indulged the hope of an abundant crop, so that they might have all the amusement they desired. But, for some cause or causes unknown to me, these hopes were blasted, and it was rarely the case that the most industrious and skillful hunter was fully rewarded for his toil. In all my experience I never have known such a small number. It is possible that the severe drought which prevailed over the entire South, had something to do with it, inasmuch as the vogetation was so stunted, that the open fields offered no cover to the incubating birds, or to the young ones after hatching; and the nests as well as the young chicks fell an easy prey to their numcrous enemies. I can conceive of no other reason. But it is a fact that the birds were unusually scarce in the central part of the State, in some localiof no other reason. But it is a fact that the birds were unusually scarce in the central part of the State, in some locali its of which is to be found, as a general thing, as fine sport as the country affords. I have been told by persons of entire credibility, that it is not uncommon for two fair dogs to find during the course of a day from twenty to thirty covies in that particular section.

The statements of persons who are not familiar with The statements of persons who are not rainfina. What the habits of this bird, as to its abundance, must always be taken with very "many grains of allowance." Its daily range is quite circumscribed, and a man may flush the same covey a with very 'many grains of allowance.' Its daily range is quite circumscribed, and a man may flush the same covey a half dozen different times, and suppose he has found a new one. Because of too much trust in such representations, I have often been subjected to bitter disappointment, and this

one. Because of too much trust in such representations, I have often been subjected to bitter disappointment, and this has happened to me, more than ever, during the past season. Still I have had some sport, and a good deal of healthful exercise in getting it. The hope of finding a still better place was exhibitanting enough to give strength and elasticity to the muscles, and when night came on, my couch was always a bed of down, to which I went without waiting to recount the haps and mishaps of the day.

Several weeks ago two of us, "well armed and equipped" for a big hunt, went up on the Pee Dee, in the county of Anson, to meet with a friend and lover of the gun, who had given us a glorious account of the birds which he felt sure abounded in some plantations ten or twelve miles further up the river. We carried with us, besides our guns, hundreds of loaded shells and three dogs. What their blood is I do not know. They have high-sounding pedigrees, but any one who has a dog for sale can write a pedigree royal enough for the most ardent believer in blood. Ours may be Laverack, Llewellin, Limberger, Lackawana, Hopskip, Jumpit or Humbugiana, for aught I know, or they may be a combination of all the breeds—the refined Mongrel—but they have bottom, speed, nose and staunchness, with no mean retrieving qualities, and we believed they could find the birds if the birds could be found. Mark, a lemon and white setter of four years, a fine hunter, steady as a stone fence, and an availant ratinger. Lean a liver-calored bittle of two and a the birds could be found. Mark, a lemon and white setter of four years, a fine hunter, steady as a stone fence, and an excellent retriever; Lena, a liver-colored bitch of two and a half years, who has a pedigree as long as a Welshman's, or as a Plea in Chancery, the general characteristics of a setter, except that her tail looks very like that of a pointer, but a fair hunter; and a toothless old waif, which was picked up as natt years, who has a pedigree as long as a Welshman's, or as a Plea in Chancery, the general characteristics of a setter, except that her tail looks very like that of a pointer, but a fair hunter; and a toothless old waif, which was picked up as he was tramping about the country ownerless, and called by us, from his evident antiquity, the Mound Builder, (he is non-historic, if not pre-historic)—these were our dogs. The last named is white and orange, and, notwithstanding his age, he possesses a physical vigor I have never seen surpassed. Though staunch he cvinces very little carnestness when on a stand, and is regardless of all obligation to hunt any where within half a mile of the sportsman. Thus prepared we reached the river at the appointed hour, halloed to our friend, the owner of "Saint's Rest," who soon came with his "flat," into which our buggies were driven, and we were transported in safety to the promised land. Very soon we reached his hospitable house and were cordiilly received by his excellent wife, whom he styles Molly Stark, who gave us a sub-t intal and well-prepared dinner, and treated us, in all respects, as only a well-bred, unpretending and sensible woman knows how to do. His friends say that the madam is far too good for him—is this unusual?—and wonder is often expressed how he happened to such good fortune as to secure her, and she such ——? Fortune as to be captured by him. But such questions suggest themselves too often to admit of long solution, and I shall be far from attempting to grapple with the vexing problem. After we had done full justice to the dinner, helped Bishop Crickett, our host, fix up his "tricks," we started for the happy hunting grounds, our host bestriding his favorite mule, with "Stikes," his hunting by behind him, and Kate, his setter bitch, following in a gentle trot. We reached our several destinations about sundown, having agreed to breakfast together the following morning; and then started out to enjoy our anticipated sport.

We met at the appointed time, and we

looked as if it was a favorite place for birds, but they were not there. At night we had twenty-six, of which the owner of Lile could justly claim but one. I got thirteen and "Bunk" twelve. Teccel, the Bishop and Dock, a son of T. who, for a boy, shoots well, succeeded in getting thirty-three. The following day our luck was not near so good, and we determined to see what could be done nearer home—

the Bishop having told us that he had heard "birds were plentiful" on the old Martin plantation, just below the mouth of Brown Creek. To that we devoted an afternoon, and found, instead of an abundance, a decided scarcity of what we sought. With feelings approaching disgust we returned to the "Bishow's Palace." reaching its hospitable norapproaching disgust we reaching its hospitable what we sought. With feelings approaching disgust we re-turned to the "Bishop's Palace," reaching its hospitable por-tals about sundown, received a kindly welcome, a good supper which the hostess had ready for our enjoyment, and soon retired to bed, having agreed to take an early start the fol-lowing morning to scour some neighboring plantations the hope of obtaining better sport than any which we had

So, after a night's repose, sweet and refreshing as few ex-So, after a night's repose, sweet and refreshing as few ex-cept "Jaboring men" enjoy—there are plenty of "laboring men" besides those who have the gus' ing admiration and solicitude of Congressmen—and a herty breakfast, we set out. It is useless to particularize the incidents of our last day in the fields. Mark and the Mound Builder held out out. It is useles day in the fields. day in the fields. Mark and the Mound Builder held out admirably, whilst Kate who spends little energy in "widening circles," was apparently fresh as she was on the first day. Lena had lost her owner the preceding afternoon, and was "a stranger in a strange hand," but was found the next morning. We started six or eight covies and bagged thirty-mymorning. eight birds morning. We started six or eight covies and bagged thirty-eight birds, my score being disgustingly meagre. The entire footing up showed that we had secured one hundred and twenty-one during the hunt. The following morning we bade our friends adieu, and returned to our homes, procuising that when November comes again, the visit will be renewed, if life and health and other conditions will allow.

renewed, if life and health and other conditions will allow. Early in December of the past year, owing to the glowing accounts we had received of the abundance of birds, Teccel, Bro. Duffrey, Mud and myself, concluded to visit the county of Chatham, and especially the 'Hickory Mountains' section of it, lying nine miles west of the town of Pittsboro, Teccel and Mud carried sixteen-bore guns, Duffrey a twenty-bore, and I a twelve. We were amply provided with loaded shells, unless we should have the good fortune to have over eight hundred shots. But we did not have a good supply of dogs, having been disappointed in securing one or two which had been promised for this special occasion. Having seen had been promised for this special occasion. Having seen an advertisement of a bitch represented to be young, healthy, an advertisement of a bitch represented to be young, healthy, statunch, and "a splendid retriever from land and water," and needing just such a one for the hunt, I wrote to the advertiser to send her on by express, and, if she was as recommended, I would send him a check for the price asked in the advertisement. She came as I had requested, but looked as if there had been a famine in the land where she was

looked as if there had been a famine in the land where she was raised. My hopes fell very low when I saw her, but I concluded to take her on and give her a fair trial.

Besides this bitch, Bro. Duffrey had his dog Bob, and Teccel a good-looking young setter belonging to Dr. T. of Wilmington, who wanted him to have some country air, and a little training during the season, his professional services confining him to the service of his patients. He has the somewhat significent name of Nix. Thus prepared, we took the train for Moncure, a station of the Raleigh and Augusta Air Line Road, which bears the same relation to Pittsboro that Callao does to the City of Lima—it is its port. Arriving about day, we renaired to an unpretending hotel, got our the train for Moncure, a station of the Raleigh and Augusta Air Line Road, which bears the same relation to Pittsboro that Callao does to the City of Lima—it is its port. Arriving about day, we repaired to an unpretending hotel, got our breakfast, and soon thereafter started for the residence of a gentleman where we were to make our headquarters during our stay. He met us in Pittsboro, and we reached his house late in the afternoon. When we got within two miles of his house, Bro. Duffrey, Mud and I concluded we would range through some inviting looking fields and get a supply of birds for our morning's meal. "Bob" and the bitch, who was "staunch and a good retriever from land and water," were to do duty for us, while Teecel went forward with our host, meaning to give Nix a trial in some inclosures near the dwelling. Both our dogs were wild, but the bitch showed her careful training by defying all authority, leaving me to indulge my philosophy and patience, while she roamed at will beyond the range of my vision, apparently endeavoring to show me that she meant to demonstrate that this was a free country, and that she was the freest of the free. I fear I was not very amiable while she was exhibiting the fleetness of her limbs, and felt much disposed to doubt whether she had ever hunted anything except crusts of bread and bones with which to sate her morbid appetite. Since then I have had little faith in the "tricks of trade" which are seen in advertisements, regarding them as intended mainly to "entrap the unwary" purchaser, and cause him to pay out his money for a comparatively valueless article. Despairing of ever heing able to command obedience from her, and chock full of disgust and anger I left the untractable bitch to indulge her own fancies, while I followed Bro. Duffrey and "Bob," in the hope that he, at least, had not lost the benefits of his education. After going a few hundred yards Bob showed signs that "something was in the wind," and just then the bitch made her appearance and came up to me near a h port. Arriving

Pretty soon, to my astonishment, she indicated a "stand," looking through the fence, as if the game was there. But as there was no cover, I regarded it as a "false point." Concluding, however, that it was barely possible that some flushed bird had found refuge in that unlikely spot, I got ready for the contingency. She would not "hie on" and I crossed the fence to flush the bird myself, if any was there. To my astonishment a cock whirred off, from within three feet of her nose, and she started in full pursuit, to eatch it. I shot it down, and then yelled until I was hoarse trying to call her back. She did come at last. I endeavored to make her "fetch," but that was just what she did not mean to do. What a "retriever from land!"

On we went, after Brother D. had bagged a bird—the others of the covey being non inventus—and soon reached a valley which gave fine promise of sport. Away went the "staunch retriever," in her lawless flight, until she disappeared in the thicket several hundred yards away. Bob caught the contagion, defied all authority and flushed a fine covey, which settled in a patch of impenetrable briars. We got several chance shots, and managed to secure two or three

contagion, defied all authority and flushed a fine covey, which settled in a patch of impenetrable briars. We got several chance shots, and managed to secure two or three birds. In the meanwhile, my bitch, who had coursing in her veins the gentle blood of the United Kingdom, showed her lineage by flushing every bird she found, or ran over, and chasing them with all the headlong vigor she had; and this she continued to do until the "sable goddess" took "her ebon throne." With light bags and heavy hearts we took up the toilsome journey, and "weary o'er the hills our course did homeward bend." Not being able to "retrieve" the bitch, I left her in the full enjoyment of her liberty, trusting that when it became dark her appetite, if not her sense of that when it became dark her appetite, if not her sense of duty, would lead her to quit the chase. But as she was on trial only, and not mine, and had exhibited such unmistakable disregard of all obligation to do what was promised in lier behalf. I thought it economical, at least, to stop after I had gone about five hundred yards, and invoke her presence

by the vigorous use of my whistle, with an occasional yell to by the vigorous tase of my whoste, with an occasionary art the full extent of the power of my lungs. At last she came up—not because I had lost her, but because she had lost me. And then, being a stranger in those parts, I was lost, and had to halloo for Bro. Duffrey. His then especially sweet voice came in soft music to my ears, and slowly I dragged my weary limbs toward the spot where I knew I should voice came in soft music to my ears, and slowly I dragged my weary limbs toward the spot where I knew I should have a kindly welcome, a substantial supper, and a chance to stretch my languid frame for soft and sweet repose, perhaps to dream of "retrieving," the following day, all the lost glories of the one that was passed. Before retiring, however, I cleaned my gun and fed my valuable kcanine acquisition. She "set" to the victuals well and "retrieved" them in the most cultivated style. In that she showed her

them in the most cultivated style. In that she, showed her breeding.

The next morning I noticed a throbbing about her head, which Teceel, who is "high larnt" on the dog question, pronounced one of the reliquim of distemper. But she was capable of eating a full bait. We left eafly; Teceel and I together, with the wild bitch, and the very tame Nix—the fierce Lucretia and the gentle Tarquin—and Bro. D. and Mud, with Bob. The bitch was less wild, having tired herself somewhat by the exertions of the preceding day, and Nix managed not only to keep within sight, but never to get more than thirty yards from the sportsmen. This was, probably, either the result of his affection for his guardian, or a wholesome fear of varmints, if he got beyond the range of the guns. Well, we had a lonely time, with these antipodal canines. The bitch did set a few covies—nearly all sle found, I presume; but when they flushed, she was moved with an irresistsome tear of variants, it he got beyond the range of the Well, we had a lonely time, with these antipodal can The bitch did set a few covies—nearly all she found, sume; but when they flushed, she was moved with an irr sume; but when they flushed, she was moved with an irresistible desire to be on hand when they settled, and would have been there always, but for the fact that the birds flew faster than she could run. Now and then we got in ahead of her because of her want of recognition of their locality, and secured a bird. Nix did retrieve, and that was about all he ob bluow

ouid do. Brother D. and Mud had kept up a considerable fusilade Brother D. and Mud had kept up a considerable fusilade during the day, and we were apprehensive that they would play the chanticleer on us at night. This excited us to remarkably hard work; but with all our efforts in this regard, we had the pleasure of finding but few birds. And, of course, when the lengthening shadows warned us that we must return, we had little difficulty in carrying the game in our bags. The whole of that day's work amounted to just twenty-three birds. When we met our rivals, we were not much displeased to learn that their success had been less than

ours.

The next day ill fortune clung to us. Game was scarce, and our dogs gave abundant evidence of having been sorely taxed by their labors. Our bitch being too much fagged to run at large, behaved herself much better, and did some good run at large, behaved herself much better, and did some good work, not only in finding and setting birds, but in occasionally retrieving in good style. Still, I determined that she was far below the standard of my hopes, and that the best thing I could do would be to return her to the party who had sent her. So, on the following day, after we had started for the railroad, disgusted with the dog and the hunt, a gentleman who had called to see us suggested that he knew of some fields on our road, where he thought we could find far more birds than we had yet seen, and prevailed on us to make the effort. I left my dog in the wagon, not caring to be worried with her any more, but Bro. D. a gentleman was the way of some fields on our roau, was to seen, and prevailed on us to make the effort. I left my dog in the wagon, not caring to be worried with her any more, but Bro. D. insisted that I give her another chance. I did so, and she soon stood a covey. Then they flushed, she pursued, as usual, and got beyond my sight. Not long after this I heard a gun about two hundred yards off, and the piercing cry of a dog. I supposed that Bro. D. had given Bob the benefit of a load to teach him obedience, and called to Mud to come on with the dog. His faint voice came back, "She's shot." Not many minutes elapsed before I saw Bro. D. coming up with the unfortunate dog, the victim of undue zeal, in his arms, looking as if his very heart was broken. Sure enough, he had accidentally given her the entire contents of one of his barrels, she having run between him and the bird just as he was in the act of shooting. She now carries fully fifty No. 9 shot between her shoulders. That mishap made a trade, for I could not return her. She got well in a few mocks and future trials and some severe discipline have weeks, and future trials and some severe discipline have made her a pretty fair hunter. Possibly Bro. D. taught her

a lesson.

It is but just to say that usually the region where we hunted is one of the finest places for birds in the State. At few years before, three gentlemen, in three days, and on the same fields, killed two hundred and fifty and left hundreds for breeding. But the naked stubble fields enabled the hawks to play havoe with them the past year. Notwithstanding we did poorly in the trial, we had a pleasant time, and think of making an effort in the future for better luck in the same territory.

Wells. a lesson.

It is but just to say that usually the region where we same territory

COLORADO STATE ASSOCIATION.

IN response to the call issued May 4, a meeting of sports, men convened at Denver May 17. The Republican of

In men convened at Denver May 17. The Repnowern of that city reports:

The room was filled with gentlemen from different sections of the State, and the interest manifested was of such a nature as to show that in the organization of the proposed association there was to be an earnestness and hearty co-operation that would insure the objects and ends sought to be accompanied. that would insure the objects and ends sought to be accomplished. Among those present were: Charles Kiessig, Leadville Rifle Club; A. W. Hogle, J. M. Fisher, George B. Dougan and D. H. Dougan, Leadville Gun Club; W. C. Sanders, C. L. Hanna, Greeley; W. E. Sisty, Idaho Springs; J. M. Roberts, F. M. Keith, American Field Club, Pueblo; T. J. Batz, W. L. Bayles, South Pueblo Gun Club; E. G. Owens, W. N. Byers, W. Y. Sedan, Charles L. Dow, H. S. G. Davis, W. B. Davis, C. C. Compton, J. C. Woods, J. M. Anderson, Max Neef, Charles Roth, J. Harrison Mills, J. Cook, Jr., W. M. Anderson, John P. Lower, L. Kershaw, H. W. Baldwin and Judge Mott, of Denver.

Judge Mott stated the object of the meeting to be the organization of an association for the protection of game

Judge Mott stated the object of the meeting to be the organization of an association for the protection of game and fish—to see that the State laws were not violated. Fish and game could not be protected unless through a regularly organized and incorporated association. The object is to have a central organization at Denver, after which it is proposed to organize auxiliaries or branches in every county in Colorado. The association at Denver, however, is to be the head—in the nature of a State organization.

W. N. Byers was selected as Chairman and Jacob S. Sedan Secretary.

Scdan, Secretary.

The plan of organization was discussed at some length, and it was finally determined to limit the existence of the organization to twenty years; to incorporate under the laws of the State under the name of "The Colorado Grane and Pish Protective Association." It was decided to chose nine

trustees for the organization, to serve for Jone Year. Upon motion a committee of tive was appointed by the chair to select the nire directors. The chair named as this committee Judge Mottan. J. Cook, Jr., of Denver; Fish Commissioner Sisty, of thehe Springs; Dr. Dougan, of Leadville, and Mr. Keith, of Pt. Cib. Fish Commissioner Sisty asked to be excused, and State Treasurer Sanders was named in his stead. stead.

stead.

The committee, after a brief absence, reported the following trustees: W. N. Byers, W. J. Kinsey, J. Cook, Jr., W. Y. Sedan and Bela M. Hughes, of Denver; C. L. Hanna, of Greeley; J. N. Fisher, of Leadville, and T. J. Bates and J. E. Roberts, of Pueblo.

Five directors were selected from Denver, in order that if a called meeting had to be held a quorum could be secured without trouble. The trustees were requested to file articles of incorporation with the Secretary of State to-day, so as to complete the organization as soon as possible.

"THE CHARMED WHITE DEER."

THE article on White Deer (Forest and Stream May 11) has more of interest to an old woodsman than you might think.

might think.

Few, very few men, are aware of the strong undercurrent of superstition which permeates the whole being of many an old, courageous, hard-headed hunter, sensible in all else, Within two miles of where I write lived O. W., a sturdy New Hampshire Hercules, who came here when land was sold at 25 cents per acre. He cleared up and "made" three of superstition which permeates the whole being of many an old, courageous, hard-headed hunter, sensible in all else. Within two miles of where I write lived O. W., a sturdy New Hampshire Hercules, who came here when land was sold at 25 cents per acre. He cleared up and "made" three farms, and was a noted hunter. His word was good as gold wherever he was known. He was as witty as Hood, furly educated for the times, and a "man among men." For many years he was obliged to go sixty miles with a bushel of wheat on his back, through the woods to Williamsport, to get bread for his family. Year after year he averaged over seventy deer per annum, with his old, long-barreled Lancaster rille, not to mention an incidental bear or panther now and then. And this man believed that his rife could become utterly useless through being bewilched.

One day, in his presence, I was ridiculing superstition to my best ability, when I noticed that "Old Oliver" sate still and quiet, with an expression on his weather-beaten face such as one sees on a white-oak Knurl. When we were alone the old man opened about thus:

"Young man, mebbe you are right. But there may be some things we don't understand. You ought to know whether I am a shot with the rifle or no. Now, how do you account for a thing like this? One day, in November, '20, I was out on a light trackin' snow in the South Woods. Half a mile from home I had a fair shot at a buck ten rods off. The buck gave me a look and walked off. In less than an hour I had anotice fair shot—not a twig in the way—and never knew where the ball went. Before noon I got the third shot—big buck, seven rods or so away—and I missed again. Then I came home — There was a squirrel on the roof of my corn-crib. I hauled up and knocked his head clean off at seven rods. How do you account for it?"

"I'd on't account for it. What did you do?"

"Tell you what i did. Started that afternoon for Auntie Johnson's, on Pine Greek, twenty miles away. She onbritched the rille, cleaned it out and gressed it with some

"I don't account for it. What did you do?"

"Tell you what i did. Started that afternoon for Auntie Johnson's, on Pine Creek, twenty miles away. She on britched the ritle, cleaned it out and greased it with something, and fied three red strings round it. Then she made me a silver bullet, and loaded the gun. Told me not to shoot till I got a fair shot, and could make sure. If I found the ball in the deer, I was to set my compass and throw the ball as far 's I sould to the east."

"And y a did it?"

"Yes, Luid. I killed a buck with that bullet, and didn't miss another deer that season,"

"What did the old lady charge you for her incantations?"

"Charge," me there dightly deer that season. Venison wasn't we, I much. I gave a saddle and skin of a big buck for twelve pounds of pork, and was glad to make the trade. Yes, pork and bread was nightly scarce. Game was plenty."

"Di 1 it occur to you that the old lady might have run a pewter oat 'an your?"

The old hunter west disgusted. He seized his cane and marched off without a word.

"Old Oliver" joined farms with a man named Joel Culver. They came in here together about 1805, were hunting "pardners," neighbors and triends all their lives, and Joel was a college-bred man. He was witty, cynical, and sceptical. I thought the superstition of his old neighbor would tickle him

"Old Oliver" joined farms with a man named Joel Culver. They came in hers together about 1805, were hunting "pardners," neighbors and triends all their lives, and Joel was a college-bred man. He was witty, cynical, and sceptical. I thought the supersition of his old neighbor would tickle him mightily, and related it, verbatim.

To my astonishment, Joel took it seriously. He thought a minute, and then said quietly: "You are beginning to hunt, just as I am done. I have killed over 1,100 deer. In my best days I could cut a chickadee's head off about every shot. And one full I missed six fair shots in succession, all standing. It was just when I was in my best shooting days. How do you account for it?"

I was dumbfounded. I said: "I don't pretend to account for it. And did you, the best off-hand shot in the county, and a man "f good education, take your gun to "Auntie Johnson" to be "enchanted?"

"I have taken m, rifle there twice," he said, quietly.
Old Bill D—k was the hardest-headed old sinner on the upper waters of Pine Creek. As his neighbors said, he width't believe anything." His experience was a little different from the above. I thought to get up a laugh and some sympathy by relating the foregoing incident, but old Bill took it seriously, and told me how his rifle was be-witched by a full, black-eyed young woman, who "came in from below" to cook for Stowell's camp. When he found his gun would not kill a deer under the most favorable chances, he took it to Auntie Johnson; and here is his exact statement, taken down at the time: "She loaded the rifle with a silver bullet, an' told me not to shoot 'fill I got a sure standin' she." An' to heat the fire-shovel red hot the next mornin' and """ to he the fire-shovel red hot the next mornin' and """ to he had the fire-shovel red hot the next mornin' and before night the news cum up that 'Jet Lev' that wuz her name, had giv' a yell an' tumbled onto the that our a bill before black the shovel not he had on the six and shape of the shovel. My ritle shot well concurb

we are 2,000 years too near our muscular ancestor, the

gornin.

As regards the superstition about "white deer," it has not reached this section, and is new to me; but I know something of white deer. Why any sensible human being should

attach mysterious importance to the color of hair on a deer,

attach mysterious importance to the color of hair on a deer, weazel, otter, or any other animal, is one of the things I never shall find out. I ought to be "unlucky." I ought to be drowned three times. (I have been drowned twice.) I deserve all the bad luck that can befall a woodsman—for I have killed two white deer—innocently, not knowing my sin; like the Yorkshire lad, who shot an owl, and only found out that he had killed a "cherrybim" by inspecting the tomb-stones of the village burying-ground.

"White deer are always does." Oh, are they? I killed a buck in Eaton county, Michigan, thirty-two years ago, white as snow. It brought no bad luck that I know of. I killed a fat doe on Flat River, Michigan, white, with the exception of a gray patch on the shoulder. Trwenty-two years ago there were three white deer on "Middle-Fork." a buck, a doe, and a yearling. The two first were milk-white. The yearling had a patch of gray hair on the shoulder. The way those white deer were hazed and chased was a caution to white deer. I took a hand in, and lamed myself, and failed. But my pard, Ira Crosby, killed the yearling. A long-leg-ged Campbell killed the buck, and I don't know what became of the doe. I suspect she came out in blue or gray the ged campoint kined the back, and I fon't know what became of the doc. I suspect she came out in blue or gray the next October; for it is a fact that the deer that is white one season is just as likely to come out gray the next as not. In Addison, Steuben county, N. Y., I have seen car-loads of venison en transitu, and I have seen at least three milk-white bucks on their way to New York. White deer are no myth

NESSMITE

THE RUFFED GROUSE AGAIN.

THE RUFFED GROUSE AGAIN.

If any doubt existed as to the estimation in which this noble game bird is held by the sportsmen of this country, a glance through the columns of Forest and Stream for the last six months would fully dispel it; and that the subject is worthy of the theme, no true lover of the gun will deny.

I am among the number who think that the scarcity of grouse in all the well-settled portions of the New England States is wholly due to overhunting; not that they are all killed off, but because I firmly believe that when harassed beyond a certain point the bird will forsake its haunts. I well remember an article on this subject in the first number of Forest and Stream that I ever saw, sent to me by the proprietor of the "Bromfield House," Boston. It was a reply to an article in a former number, in which the statement had been made that the bird was not naturally wild, but the reverse. This was disputed in the article I read, and authorities were introduced to prove that the ruffed grouse was by nature extremely wild and wary. Nothing could be farther from the facts than this. The bird, when wholly unmolested, is exceedingly confiding and unsuspicious, scarcely less so than its cousin, the spruce partridge.

I spent the past winter in camp just north of the Megantic Mountain. The woods in every direction were full of ruffed grouse, and their tameness was almost beyond belief. One day, while examining the roots of a huge tamarac as to its fitness for ship timber, I spied a beautifully sleek female partridge picking gravel from an upturned root a few steps away. I suspended operations on my tree and called to her softly. She eame from under the root a few steps toward me, and began to daintily pick the buds from some yellow birch sprouts. Then she looked curiously at the mingled moss and snow piled up around me and walked quietly away, feeding as she went. I had the curiosity to pace the distance—just six paces to the root!

That same evening two of my men came in from work quite excited. They had se

That same evening two of my men came in from work quite excited. They had seen seven partridges under one tree, and one of them behaved in a singular manner—his tail was spread to its fullest extent, all his feathers were creet, his wings drooped to the ground, and he made little rushes, "exactly like an old gobbler." Old readers of Forest and Stream will recognize this bird.

One marked peculiarity of the ruffed grouse I have never seen alluded to by any writer. When in flocks, in September and October, they give utterance to notes like the "prating" of domestic fowl, but inexpressibly soft and pleasing, like the tenderest cooling of the dove. I have heard them for an instant on several occasions, and once, a few years ago, had the pleasure of listening to them as long as I pleased. This was on the Sebois, where I came upon a covey of nine was on the Sebois, where I came upon a covey of nine "dusting" one pleasant day in October. They paid not the slightest attention to my presence, but continually gave forth their soft call, sometimes two or three of them at a time. An experience like this would be impossible where the birds had learned to regard man as an enemy.

Penobscot.

MAINE.

In your issue of May 11. I notice an article from the pen of "Ruffed Grouse," wherein he pays his respects to Nessmuk in a manner not too complimentary. I will only remark that Nessmuk's "brief experience in grouse wing-shooting" extends over a period of 46 years, and that he has not usually "experienced great difficulty in doing much more than to make the "feathers fly," having, during all that time, been quite able to hold his own shooting grouse over a setter with any party of "true sportsmen" he has been out with. As to the "pleasantry" of hunting deer and "playing a huge pickerel for two mortal hours," etc., I have very seldom lost a wounded grouse, and we always have dogs that are nearly sure of stopping him. In the last fifteen years I cannot recall losing more than three wounded deer. I have lost that many wounded grouse in a day, as what grouse shooter who uses a setter has not? If it is necessary to drag a "huge pickerel" from the North Woods to make out a charge of cruelty, I will only say I have not observed a general disposition among anglers to decline a rise from their best trout or pickerel because, forsooth, there might be dead limbs or lily pads in the vicinity that would make a tangle probable. Getting a the vicinity that would make a tangle probable. Getting a large fish anchored on the bottom and trying for a long time, patiently, to work him free, is a queer way of playing him. And I could have killed the fish in twenty minutes with a

And I could have killed the fish in twenty minutes with a fair show in clear water.

I have no objection to the graceful and intelligent pointer, though I prefer the companionable setter, nor to the man who enjoys shooting over a finely trained dog. There is no sort of hunting with gun and dog that does not include cruelty; but the least cruel modes are best, and those which send away the most game in a wounded state are to me the least defensible.

The evidence from nearly all parts of the country is that the grouse failed and faded away suddenly. Reference to back files in Forners AND STREAM and other sporting papers will show this. In more than forty years' observation of grouse habits, I have seen no evidence that the birds make short, local migrations. I had rather thought them the one species of game bird that never migrated; that the old cock stuck to his home and drumming-log year after year, and the

hen made her nest from year to year in the same thicket, even though food became searce enough to threaten starvation.

Yes, the suarer is a myth in this region. I do not know of a snare being set in this county, or near it, during the last fifteen years. We don't allow it. If sportsmen about market towns and in old settled regions allow the snarer to follow his accursed trade, the more shame to them to now his accuract trade, the more sname to them. And we have no pot-funters sneaking through the brush, slaughtering grouse for market. A man hunting in that way kills few birds. Let R. G. try it. Let him leave his pointer at home, and, pitting himself fairly against the wary grouse, try still-hunting him for a few days. If he gets more than two birds for a hard day's tramp, he will beat any pot-hunter I know of. I know of.

Let us not abuse terms; we are all pot-hunters. hunts grouse in any way unless he has a love for the sport, and no man has a moral right to murder such birds unless he can make good use of them, i. a., bring them to pot. But when we talk of the snarre and hunter for market, we strike

can make good use of them, i. e., bring them to pot. But when we talk of the snarer and hunter for market, we strike solid ground—a platform on which all humane, reasonable sportsmen can stand. And our experence of the market butcher seems a little different from that of R. G.

For instance: Soon after the season opened for woodcock, two strangers came to W. for, as they said, a little shooting. They had two tall, wiry red setters, of excellent style and appearance, and used the conventional ten-bote Parker. They went through our woodcock covers in two or three days for about all there was in them; went over to Pine Creek and worked the covers there; from there to the Tioga Valley, the Cowanesque Valley, and we heard of them to the west of us, working from daylight until dark, and shipping all their birds to market. They made a vigorous campaign against the woodcock, and did not make any pretense of secrecy about their business. "They were professional market-hunters, and had been for years," so they said. "They had as good a right to the birds us any living man or class of men, and as good dogs as Grouse Dale or any other dog that ever showed on Robbins' Island. They loved the sport, and intended to make a living by it. They only slot in the open season, when they had a legal right to do so," etc., etc. "Elder" Yale, who was out with them one day, and who is himself a good wing shot, says, taking the two men and their setters, they made the most destructive "team" he ever saw in the field.

Woodcock were scarce after they left.

This was last summer; and, as they went through our villages they took stock and note of all the grouse covers

This was last summer; and, as they went through our villages they took stock and note of all the grouse covers along the route, to repeat the campaign when the grouse season opened, sending their birds as before to market. These two men did more towards exterminating our game birds in one season than all the sneak-hunters and pot-hunters have done in the last ten vers. done in the last ten years.

I do not know if this sort of thing is becoming common in

the older and more thickly settled portions of the country. I should think it might be. Certainly there is no law to preit.

I did not "credit the best wing shots with only three "I redited two ordinary cits, out of practice,"

birds per day." I credited two ordinary cits, out of practice, with killing six birds and wounding about as many more. One man, as every sportsman knows, would have been likely One man, as every sportsman knows, would have been likely to do as well, or better.

And probably R. G. and I could talk together without disagreeing very widely when it comes to the bed-rock of true sportsmanship—preservation of our fast-failing game, and

humanity.

There is no call for Ruffed Grouse to 'bcat' his 'dogs there is no can for function to bear his dogs a fishing-tackle into ploughshares," just yet. And, as he sa of me, he has only my best wishes.

NESSMUK.

NEW YORK GAME BILL.

THE open seasons proposed are: Deer, Aug. 1 to Dec. 1; use of dogs allowed only in October, and at no time in St. Lawrence county; no deer to be killed in Queens and Suffolk counties for five years. Crusting and killing when yarded are prohibited. No fawn can be killed when in spotted coat.

Wild duek goose brant Sent I to May A begins Oct 1.

yarded are prohibited. No fawn can be kilica when in spotted coat.

Wild duck, goose, brant, Sept. 1 to May 1; begins Oct. 1 in Richmond, Westchester, Suffolk, Queens and Kings. Snipe, plover, sandpiper, bay or shore birds of any kind, in Richmond, Westchester, Suffolk, Queens and Kings counties, July 1 to March 1. Night shooting prohibited. Swived guns prohibited. Floating batteries and bough-house at greater distance from shore than twenty rods prohibited; does not apply to South Bay west of Smith's Point, Peconic Bay, Lake Ontario, River St. Lawrence, the Hudson below Albany, Long Island Sound. Sailing for wild fowl forbidden, save in Long Island Sound (where pursuit in steam vessels is prohibited), Lake Ontario, the Hudson below Nyack, and waters of Wyoming county.

Quail, Oct. 20 to Dec. 31 inclusive.

Hare or rabbit, Oct. 20 to Dec. 31 inclusive. In Wayne county, Oct. 1 to March 1. Use of ferrets forbidden, save in orchards, etc.

county, Oct. 1 to March 1. Use of ferrets forbidden, save in orchards, etc.
Woodcock, months of July, September, October, November and December. In New York, Richmond, Kings, Queens, Suffolk and Westchester counties, month of July, and from Oct. 20 to Dec. 31.
Black or gray squirrel, Oct. 1 to Dec. 1.
Ruffed grouse (commonly called partridge), pinnated grouse (prairie chicken), spruce grouse (Canada partridge), Sept. 1 to Dec. 31. Ruffed grouse may be killed in Oisego county in month of August. In counties of New York, Richmond, Kings, Queens, Suffolk, Westchester, Oct. 20 to Dec. 31; pinnated grouse in Kings, Queens and Suffolk protected for five years.
Netting and snaring forbidden.
§ 35. Any person may sell or expose for sale, or have in possibilit and

Netting and snaring forbidden, § 35. Any person may sell or expose for sale, or have in possession, any venison, any quail, any hare or rabbit, any woodcock, any black or gray squirrel, any ruffed grouse (commonly called partridge), and any pinnated grouse (commonly called Canada partridge), and any pinnated grouse (commonly called prairie chicken), during the month of January, without liability to punishment or penalty, provided it be proven that such birds or game were killed without this State, or within the period provided by this act. In such case any action commenced may be discontinued without costs to either party.

case any action commenced may be discontinued without costs to either party.

Killing song and insectivorous birds, eagle, woodpecker, night hawk, yellow-bird, wren, martin, oriole, whip-poor-will, swallow, thrush, forbidden. Robin, meadow lark, starling, may be killed Oct. 20 to Dec. 31. Robins may be killed when destroying grapes or fruit. Nests of wild birds may not be robbed nor destroyed (except crows, blackbirds, hawks and owls.) Snaring forbidden. Exception to foregoing is made in case of students and collectors holding certificates from

the N. Y. State Museum of Natural History, Buffalo Society of Natural Sciences, Linnean Society of New York, Lyons Scientific Association of Cornell University, or Poughkeepsic Society of Natural History, or any scientific college in the

State.

Penalty for violation of any provision as to moose, or deer, or venison, or the use of nets, seines or other devices for taking fish, \$50; violation of other provisions, \$20.

WET WEATHER AT COBB'S ISLAND.

WET WEATHER AT COBB'S ISLAND.

THE season for shooting snipe has so far proved a failure at this place. For thirteen consecutive days have the floodgates of heaven been let loose upon this devoted isle and the rain it raineth every day. It seems as if there has been enough water falling on this hundred and sixty acres the last month to furnish the whole of America and irrigate the dry sahara desert. Every morning the sun would break through the clouds and the deluded sportsmen would don their shooting-suits and with their trusty breech-loaders sally forth with the idea that the sun must shine out at last and that the reservoir up above must perforce be dry by this time.

"Hope springs eternal in the human breast."

As Mr. Dick Swiveller pathetically observes. "Our fairest

As Mr. Dick Swiveller pathetically observes, "Our fairest hopes bloom but to decay," and every evening, regularly as clock work, a storm would burst that sent the sportsmen dripping and shivering back home.

diverse work, a storm would burst that sent the sportsmen dripping and shivering back home.

This continued tempestuous weather has kept the robinshipe away, and where generally there are a thousand, now not a dozen can be seen. The graybacks and willet are plentiful and the curlew unusually abundant.

Among the arrivals last month were the following sportsmen: C. B. Slingluff, James Hunter, Morris Thomas, E. B. Whitman, S. T. Hayward, J. D. Mallory, H. P. Lueas, James Caffron and Hamilton Easter, Mr. Newton Dexter, of Providence, R. I., and the yacht Elfin. All of these gentlemen have by twos and threes left "disgruntled" and disgusted for their homes, except, indeed, Mr. Easter, who intends to fight this confounded weather if it takes all the summer. summer.

intends to fight this confounded weather if it takes all the summer.

As I write this the rain if falling, not in showers nor in gusts, but in a relentless, steady, business-like pour, that shows it has no intention of letting up. The island is wreathed in a dim fog and everything looks desolate in the extreme. Indoors it is decidedly blue, and I for one knock under to this weather and wish I could go to some clime where the earth is nourished by evening's dews and not by a three weeks' steady, persistent shower-bath.

Elkenny Cobb the younger has just returned from the neighborhood of Smith Island (where he has anchored his sloop) with forty dozen birds—mostly curlew and graybacks—all the result of his own gun. He shoots for the market, and can sit in his blind all day, rain or no rain. It is a heap of difference digging for a wootlehuck for sport and excavating for him because you are out of meat.

The island will be open for guests the first of June. It has been improved in many ways.

Chasseur.

Cobb's Island, Va., May 15.

SHOOTING NESTING PIGEONS.

Editor Forest and Stream:
I see in your issue of May 11 an article from "Nessmuk" condemning the shooting of wild pigeons at nestings in Penn-

There my our issue of say It an attace from Accessment condemning the shooting of wild pigeons at nestings in Pennsylvania.

I have lived in the northern part of the State some thirty years and am well acquainted with the woods of Tioga, Potter and McKean counties, and as pigeons never come here at any other times in large numbers, I would like to ask him if they could not be taken now when we could get any? I do not know of any good fall shooting for them within reasonable reach of here. There have been almost none at that season in this section for the last fifteen years, and even before that they were not plenty. Am sure there would be few or none taken by the people of this section if not in mesting season. Have just returned from the nestings on the head waters of west branch of Pine Creek, near which I camped three days and was all through them. The number of birds has trebled within the last two weeks; some of these last are commencing to latch and others just building, while in the first nesting the young birds are beginning to fly. There was very little shooting in or near the nesting; and not a single net did we find. Saw a few places, however, where they had been, but was told that they were promptly driven out. But of course there were hundreds of gunners and netters outside the one mile limit.

We are all norce or less selfish; and I can see no good a certing to us by allowing these pigeons to go, not to be seen in this section again for maybe four or five years, and then only to nest again. The nesting is on the west branch of Pine Creek about thirty miles west of Wellsborough, Pa., and a little more south from Wellsville, N. Y.

Backwoodsmax.

Brookland, Pa.

How Campornians Protect their Crops.—Most of our readers have seen or heard of the immense flocks of geese which in winter and spring are to be found in California, and have read of the great amount of damage done by them to the crops of young wheat. The San Francisco Call gives an interesting account of one method by which the grain fields are protected from the feathered ravagers. It says: "Various methods have deen devised of exterminating wild geese without avail, until geese herding has become a profession as distinct as herding or trapping. In the early winter the geese appear in the grain counties in myriads, traveling about in vast flocks. Their hunger is insatiable and the new wheat is rapidly destroyed. Dr. H. J. Glenn, whose ranch in Colusa county covers most of the arable land in that county, numbering some 75,000 acres, or nearly twelve square miles, expends about \$10,000 a year in herding his geese. He recently purchased in this city for the present season between \$2,000 and \$3,000 worth of cartridges, about 250,000 in number, of .44-calibre. He has constantly in his employ, while his wheat is growing, about forty men, all of them mounted and nearly all armed with Henry rifles and field glasses, who patrol his property during the day and on all moonlight nights. These men are regularly organized into a patrol guard. They discover with their glasses the focks of geese, which at a distance of from 300 to 400 yards look like a white blanket spread over the green wheat, and they discover for the green wheat, and they discover when the middle of the flock. This unexpected visitation sets the flock on the wing, and the geese herder follows them up, keeps planting bulleta among them until they rise to a great height, and, disgusted, leave the vicinity. Few geese are killed, the object being to

keep them on the wing and consequently off the wheat fields. Those that are killed are carried off and shorn of their feathers, but the revenue from them amounts to little. On Dr. Glenn's ranch about 8,000 cartridges are used in a day, which represents about 20,000 geese daily put to flight. Oftentimes a thick fog blows in, and this appears to be the favorite time for the geese and they devour the wheat with great energy. The herders then, fearful of shooting each other, are almost baffled, but when the fog rises the flocks are put to flight and for hours thereafter the air is filled with feathers and geese and Glenn's ranch resounds with the clatter of rifles and the frightened cries of the persecuted fowls. To pay his men, buy ammunition and maintain horses costs Dr. Glenn some \$10,000 per annum, but it saves his wheat, which yields \$100,000, as without the geese herders half would be destroyed. The herders become very expert in their business and are generally good shots and capital horsemen."

Illinois.—Aurora, May 13.—The spring shooting is about of here. The duck shooting was not as good, I do not think, this spring, as usual—too much water. Our creeks and ponds have been full to running over all the season. This is one of the worst faults with a prairie country. If there is too much rain the sloughs will be so full of water that the ducks and geese can get away far enough from shore to be out of gunshot. The snipe have been quite plenty with us this spring, but were very wild and not in very good order. I think there are more prairie chickens in this section than a year ago this time. I counted over fifty the other morning. It is about time for them to next; and if we don't have too much rain in the next six weeks our chances are good for next August. I have seen but one quali this spring. Where they are is more than I can tell; it wasn't a hard winter for them here, but very little snow. I have been around to several good thickets and can't find a bird. Last fall I knew where there were several good bevies. I think the hawk has had his share of them. The plover have gone north, excepting a few stragglers; they have furnished some sport for about three weeks. They have been exceedingly wild.—L. A. H.

wild.—L. A. H.

LAKE TOHOPTALAGA.—Sanford, Fla., May 6.—This week I made a trip to Kissimmee City, on Lake Tohoptalaga. I give it as pronounced by the Seminoles, the spelling which is recognized here. The South Florida Railway was completed to that point in March, 1882. The railroad hotel was nearly finished when it was blown flat by a squall. I suppose it will be rebuilt for next winter's patronage. I staid at Kissimmee only a few hours and had no opportunity to hunt. While there five young Seminoles came in from the country to trade, dressed very au naturel and laden with deer hides and bird plumes, which latter they sold to the passengers on the train. Among the Indians was one spiendidly formed fellow of about nineteen or twenty years, dressed in a white shirt and leather belt, I believe that was all. He did some pistol-shooting and a war dance. His name, inscribed on the shirt, was Billee Hum. The lake is lovely, and its borders look very inviting to the sportsman. A new railroad is to be built immediately from Sanford to Indian River, and will open up that section of the country.—Trump.

Sportsmen vs. Rowdes.—Howard Centre, Iowa.—Editor Forest and Stream: The gunning rowdies, whom you so justly condemn, are not content with the depredations you speak of, but must also get what fruit they can carry away in addition to what they can car. Where notice had been publicly given requesting them not to hunt on certain premises, I have known them to gather, six or eight at a time, on Sunday, and fairly make the day hideous, shooting at anything or nothing. I think the only way to restrain them is to make it a penal offense—something more than trespass—to hunt in any settled neighborhood without special permission from the owner or occupants of the land. Farmers often want a share of the game for their own use, and askide from this consideration it is for their interest and also that of the sportsman that the game be preserved. I have lived on the prairie nearly twenty-six years, and spring would be lonesome without the music of the prairie chickens, and I know that with decent treatment they need never be exterminated.—B. H.

Broiled Partridge in May.—The Adirondacks, May 16.
—Editor Forest and Stream: I inclose a slip cut from the
Morning Telegram of May 16, of Plattsburgh, Clinton county,
N. Y., giving the bill of fare at Ralph's Hotel, on the Chateaugay Lakes, in the Addirondacks: "Pishing is reported excellent at 'Ralph's.' A party of three caught eleven salmontrout the day before yesterday. Broiled partridge was enjoyed for breakfast yesterday morning at the hotel. Fishing
and hunting are promising in that region." You will notice
"broiled partridge." It seems strange that hotel-keepers,
whose prosperity depends in a great measure on the sport
that the game in their vicinity affords to their guests, will
kill the golden goose, as it were, by encouraging their guides
to kill the birds off their drumming logs and nests. If such
lotel men are so stupid that they cannot see that they are
injuring themselves by making a market for game out of
season, they ought at least to be punished for breaking the
law.—Grouse. BROILED PARTRIDGE IN MAY .- The Adirondacks, May 16.

kelling Ohio Quall. In May.—Ashland, Ky.—Elitor Forest and Stream: In the Cincinnati Commercial of May 14, I found this item: "Springfield, O., May 12, 1882. There is, perhaps, but little of field sports proper, in Clarke county, as compared with some other regions; indeed, some might think it hardly worth mentioning. Last Friday three of us killed ninety quali in the afternoon, but that was altogether exceptional, and may never happen again. I never heard of its being done before. Winter before last killed about all our quali, and that is about all the sport we have in this county.—A. McC. Wilson." Now if that is the way game is protected in that part of the State, no wonder it is growing scarce. Think of three men killing ninety quali in a half day in the middle of May, and in the great State of Ohio; and to cap the outrage, boldly writing about it to a great newspaper as if it were something to be proud of. Surely there are no sportsman's clubs in that locality, or they would put the scoundrels through to the full extent of the law,—Mos-Ambique.

PHILADELPHIA NOTES.—The weather has been so unpleasant for the past week, in fact, since the 1st of the month, that there has been no trout fishing whatever indulged in by our people. Capt. Clay writes from Elk county, Pa., he

has been out but once and then had but poor success in streams fished for the first time this season; thirty-five trout was all he basketed. It looks as if Vennor's prophesy that we should have a cool and wet spring and summer would be true.—Homo,

Lincoln Sportsman's Club.—Lincoln, Neb., May 16, 1882.—At the annual meeting of the Lincoln Sportsman's Club held here on the 10th inst., the following persons were elected officers for the ensuing year: Burr II. Polk, President; E. Hallett, Vice-President; R. H. Corner, Secretary and Treasurer. The following members were selected as team to shoot for State Cup at the State tournament to be held at Omaha, commencing on the 23d of this month: Messrs. Hallett, Harley, McBride and J. E. Baum, with Messrs. Polk, Hathaway, White and Quick as alternates, Five delegates were also appointed to represent the club in the State convention.

Philadel.phia Notes.—Report comes from Townsend's and Corsen's Inlet, N. J., that the bay birds came during the late prolonged storm and passed right on north. I can hardly credit this, but it may be so. My informant has just returned from the former place and states that it is "the say" of the natives. I am inclined to believe the robin-snipe and blackbreasts will yet show themselves. Let us see. Mr. M. K. Warne, who gave up his rifle gallery in Philadelphia to establish one in the city of Washington, D. C., has returned to Philadelphia and reopened his old place at the corner of Eleventh and Chestnut.—Homo.

MICHIGAN.—Monroe.—With the first of May snipe and duck shooting closed until September in our State. Ducks have been unusually abundant, and some extraordinary bags have been made in our marsh. Snipe have also been fairly plenty and several good bags have been made. Quail and ruffed grouse have wintered nicely owing to the past open winter, and with a good breeding season we look forward to some enjoyable days next November in pursuit of the brown beauties with does and gen. beauties with dog and gun.—John Davidson

Illinois.—Jonesboro, May 3.—Quail promise to be abundant in this vicinity the coming season.—W. W. J.

Sea and Biver Hishing.

I was among the Thousand Islands of the St. Lawrence last sum mer. When you visit that river go by all means to Alexandria Bay and enjoy two days' of fishing—one for pickerel with the spaces. Convoy can tell you what is is, and the fisherman there (though a Comoy can ten you wint it is, and the insterman there (though is scally profane dog at the best) will supply you; only take with you a couple of strong, thick, trolling hand lines. For the bass another day will hardly suffice. Use for them a fly on the ordinary size lake bess hook, with scarlet wings and body, fastening on a bit of a forked pickerel's tongue, by passing through the hook until it will hang lightly from the bend. Play it among the rapid currents around the points of the island, with thirty yards of silk line out from a twelve-feot stiff rod, and you will say that your trout fishing will hardly excel it. You are no doubt aware that in August the bass are close to shore on rocky bottom, but such advice to you is "like coal to Newcastle." give it as new to myself last summer.—Extract from a letter of I give it as new to myself last summ Rev. Geo. W. Bethune, March 30, 1847.

BASS FISHING ON THE ST. MARKS.

PEADER, do you ever fish? If you have, then you can enjoy what I have to say. If you have not, then go and fish on some sparkling stream, under the shade that grand old dame Nature furnishes, "without money and without price," and feel for once in your brief existence one of the most exciting pleasures that ever thrilled the human

frame.

A pleasure which once tasted stills the care-born passions of the heart and weaves in the intricate, tangled web of life bright and golden filling—drowns in the waters of forgetful ness the sorrows, temptations, and disappointments of life—

bright and golden filling—drowns in the waters of forgetfulness the sorrows, temptations, and disappointments of life—
"Smoothes the wrinkted brow of care
And writes a thousand graces there."

The gray dawn is just breaking. Its soft silvery light stealing up the east quietly embraces dark-browed Night, "clad in the beauty of a thousand stars," chases the dark-ness from her sable brow, and another bright day is born. Then we gather at the river—the silent-flowing, dark-bosomed St. Marks, which winds its way through Western Florida to Appalachee Bay, from out of whose waters the active mullet are leaping high in the air in every direction, whilst along the banks the hungry bass are plunging wildly after scampering minnows, which frantically dart over the water's surface in the vain endeavor to avoid their hungry enemies. Our sympathies go out to them, and with glittering spoon-bait well in hand, moving 'neath the surface, looking a thing of life, we go to their rescue. A few strokes from our brawny boatman's stout arms, and our boat is glidling by the scene where the watery war of life upon life so lately raged. How wildly, excitedly the pulse's maddening play as the deceifful bait sweeps the edge of the shore. He is there, just under the shade of a large bush bending over the water. I know this from the swirl on the wave as we approach. Will he strike? The bait is past his lurking place. Quietly reversing. I send it speeding back over his lair, when, like the rush of many waters, he plunges upon the pretty bait and dies like a hero! realizing, if a fish can realize anything, the poet's words—

"Many things in this world That look bright, pretty moth, Only dazzle to lead us astray."

To our delighted eyes, what a prize! a five-pounder; not

an ounce less

To our designed eyes, what a prize! a two-pounder; not an omnee less.

Gently, boatman, gently. Let the dripping oars lightly touch the water. Under that wide-spreading oak overshadowing the water, lurk monster bass, over whom the silent waters have swept for many summers. Yesterday, while fishing for gold perch, I saw two of them sweep beneath, in a style that showed even fishes felt a conscious power. As the largest of gold perch fled, affrighted, from the monsters, they exultingly seemed to say, "See how they flee before us monarchs of the deep;" and they shook their broad tails in evident merriment.

I am impatient, boatman, to try the skill of man, and the strength of steel with one of these cunning old fellows. Let your our strokes so gently move the waters that the boat will glide over it without a ripple.

Our troll is acting finely. Never was artificial bait more

cunningly devised to deceive. The spot is reached. With a quiet movement I send the bait swiftly on shore. It has passed half the breadth of the great oak's shade, when like the rush of a startled deer one glorious fellow strikes with all his power and the good books strike home. Every one is fast in his huge jaws. Now comes the "tug of war," and the tug of man and fish, too. Our rod is bent almost double as he rushes, maddened with pain, down into the depths of the water, and we have to let him go to the end of the line. Then checked in his headlong career by the strong line and unyielding hooks, he comes as swift as shooting stars across the blue bend of Heaven to the top, and springs his full length into the air; endeavors to break the line by a stroke from his powerful tall, as head down he plunges again into the water. After a fierce five minutes' struggle he yields to fate, and floats broadside, "a thing of beauty," upon the water. Carefully, warily I lead him up to the boat, hoist in, and bind the captive fast, and shout for joy. Boatman, head for home. Glory enough for one day. It is reached, he is weighed, and tips the scales at fonrteen pounds.

Bandender, Georgia.

O. G. G.

"CATTING."

"CATTING."

In the "Tennessee Fish Notes," by J. D. H., in the Foreaught a yellow cat out of the river the other day, with ordinary tackle which weighed sixty-one pounds."

It is to be regretted that the details of this affair are not given. It would be interesting to know how the cat happened to be in the river—whether by accident or design; and all sportsmen will be eager to know something more about the tackle used by Mr. Poole. It is said to have been the "ordinary tackle which weighed sixty-one pounds," and perhaps the Tennesseeans who devote themselves to this particular sport understand exactly what is meant; but in the North, where the cats found in the water are generally too stale to entice the angler, the statement cannot fail to excite some speculation. The tackle, weighing only sixty-one pounds, could hardly have been a derrick or a dredging-machine—although the latter would seem to be well adapted for the purpose—and it was manifestly something heavier than a rake, scoop-shovel, or pair of tongs.

In view of the well-known predilection of cats for live balt, it may have been a big dog on a string or a mouse suspended by a log-chain, according as it is customary in such cases for the bait to take the game or for the game to take the bait. It certainly seems probable that in a stream well stocked with cats, a small water-spaniel—say a brown hackle—on a light casting line and fly rod would afford excellent sport. Such tackle need not weigh over thirty pounds. Mr. Poole seems to have used a larger dog than was necessary. The smaller sized would be better for easting, and would make the contest more uncertain, and therefore more sports-manilie.

Just how we are to induce the cats to take to the water in Just how we are to induce the cats to take to the water in sufficient numbers to make this sport popular with the fishing fraternity may not be clear; but it is evident that the surplus kittens of our large cities, after being accustomed to city milk, cannot have any serious antipathy to the purer water of the pond and stream.

Certainly this subject is worthy the careful attention of our fisheulturists and sporting clubs. Just as we are beginning to realize and mourn over the rapid extermination of our game fish and animals, a new sport with an inexhaustible supply of material is at hand.

Take, for example, a single block in New York occupied by say one hundred householders. Each one of these would cheerfully spare a hundred cats from his neighborhood. This makes ten thousand eats to the block available for our purpose; and of course there are plenty of dogs out of busi-

purpose; and of course there are plenty of dogs out of business who might thus be furnished with pleasant employment and a reason for existence.

We hope to hear further from Mr. Poole on this interest-

ing topic. Спіслоо, Мау 14.

RIPARIAN RIGHTS.

RIPARIAN RICHTS.

THE St. John, N. B., Telegraph, of May 9, publishes in full the judgment of the Supreme Court of Canada in the case of the Queen vs. Robertson, by which the rights of riparian proprietors are defined. It was based on a special case which set out at length the facts admitted, the principal of which were that Mr. Robertson had leased from the Marine and Fisheries Department as a fishing station for fly fishing the Miramichi River from Price's Bend to its source. Price's Bend was about forty miles above the ebb and flow of the tide and navigable at certain seasons, for canoes, small boats and logs. The land along the part of the river covered by the company to James Steadman and Edgur Hauson, who claimed the right to fish in the Miramichi as riparian proprietors. Mr. Robertson prevented them from fishing and both brought actions against him and recovered. In the present case the following questions were submitted to the court:

"1. Had the Parliament of Canada power to pass the 2nd section of the said Act on titled An Act for the preparation of

court:

"1. Had the Parliament of Canada power to pass the 2nd section of the said Act entitled An Act for the regulation of fishing and the protection of the fisheries?

"2. Had the Minister of Marine and Fisheries the right to

nsning and the protection of the fisheries?

"2. Had the Minister of Marine and Fisheries the right to issue the fishery lease in question?

"3. Was the bed of the S. W. Miramichi within the limits of grant to the Nova Scotia and New Brunswick Land Company, and above the grants mentioned and reserved therein, granted to the said company?

"4. If so, did the exclusive right of fishing in said river thereby pass to the said company?

"5. If the bed of the river did not pass, had the company, as riparian proprietor, the right of fishing ad jilum aqua; and if so, was that right exclusive?

"6. Have the grantees in grants of lots bounded by said river, or by any part thereof, and excepted from the said company's grant, any exclusive or other right of fishing in said river opposite their respective grants?

"7. If an exclusive right of fishing in a portion of the Miramichi River passed to said company, or to the grantees in the excepted grants, or any of them. could the Minister of Marine and Fisheries issue a valid fishery lease of such portion of the river?

"8. Where the lands (above tidal water) through which

tion of the river?

"8. Where the lands (above tidal water) through which the said river passes are ungranted by the Crown, could the Minister of Marine and Fisheries lawfully issue a lease of that portion of the river?"

The result of the decision of Mr. Justice Gwynne, who heard the case in the Exchequer Court, is as follows:

The first, third, fourth and sixth questions submitted in

said special case should be answered in the affirmative and the second and seventh questions in the negative. This court doth further declare that it is unnecessary to give any special answer to the fifth question, as this court is of opinion that the bed of the Southwest Miramichi River within the limits of the grants to the Nova Scotia and New Brunswick Land Company and above the grants mentioned and reserved therein did pass to the said company.

This court doth further declare with reference to the eighth question that, "if what is meant by this question be whether the Minister of Marine and Fisheries could lawfully issue a lease of the bed of the river where it passes through ungranted lands, this court is of opinion that the said minister could lawfully issue a license to fish as a franchise apart from the ownership of the soil in that portion of the river." said special case should be answered in the affirmative and

From this decision the Crown has taken the present appeal.

THE RANGELEY LAKES.

THOSE who wish to have the first chance at the trout in the Rangeley Lakes, should visit the Middle Dam, by the way of Bethel and Lake Umbagog, as they can reach the fishing grounds by that route from one to two weeks earlier than by any other route. The Upper Dam can also be reached via Bryant's Pond and Andover from one to two weeks earlier than by any other route. There is not as much activate the lake the spring as usual and at the present time.

than by any other route. The Upper Dam can also be reached via Bryant's Pond and Andover from one to two weeks earlier than by any other route. There is not as much water in the lakes this spring as usual, and at the present time it is falling in the Richardson Lakes, and rising in Umbagog. In the other lakes it remains about the same as last fall. Round trip tickets to the lake region may be purchased in Boston as soon as the ice leaves Umbagog Lake. There is some reduction in the prices this year, the tickets via Bryant's Pond and Andover, all rail, to Middle Dam and return, being \$12; to Upper Dam and return, \$13; to Indian Rock, Haines's Landing, or Bemis Stream and return, \$14. Tickets to Middle Dam and return, via Bethel and Lake Umbagog, \$14.50. There will be a daily mail from Bethel to Uplon during June, July, August and September, and the stage will also run daily. The steamers will run on Umbagog Lake daily excepting Sunday, between Upton, Sunday Cove, Errol Dam, and Magalloway River Landing; the trip to Magalloway last year was made only three times a week, and this change to daily trips will serve the Pasmachenee travel much better. The daily mail spoken of above will also be continued to Magalloway during the same four months.

The stage line between Bryant's Pond and Andover is to months.

The stage line between Bryant's Pond and Andover is to The stage the between Bryant's Pond and Andover is to be equipped with new Concord coaches this summer, and several extra horses, and quick time will be made. The steamers on the Richardson Lakes will stop at the South Arm over night, and make two trips daily between the Arm, Middle Dam, Upper Dam, and Birch Lodge.

CHARLES A. J. FARRAR.

ANDOVER, Me., May 7.

The Rainbow Trout.—Boston, May 20.—In regard to the appearance of the rainbow trout, which I mentioned in your issue of April 13, and which L. W. G. comments upon in your last issue, I would say: If the only fish of this species which I saw at Mr. Blackford's trout-opening, were dead ones which had come from California, then, as your correspondent says, they might not have appeared to their best advantage. But there were specimens live and dead from the State of New York. One fish of three or four pounds, from the South Side Club, of Long Island, was swimming in a tank of glass, and on this I based my opinion, which I still adhere to, that they are coarse, black, ugly beasts, with a feverish flush on the sides which has a most unwholesome look. While willing to accept L. W. G.'s statement, regarding their rapid growth and all things else that he claims for them, I will not agree with him that they are handsome. The scales are as coarse, if not coarser than those of the English trout, which by the way is not near as handsome as the small trout, which the English call "charr," and the rainbow trout no more compares with our Eastern brook trout than a mud thrite does to a humming bird. Again, I want no more of them, and hope that they will keep them out of my favorite trout brooks, for they do not look fit to eat. Mr. James Annin hit the mark when he said at the fishcultural meeting that no man would be as proud to show a creel full of rainbows as of fontinalis. Perhaps the name of "rainbow" led me to expect beauty, certainly ritelea, which means nearly the same as rainbow, would convoy the idea of a fish whose iridescent splendor would be beautiful to behold, and I have been disappointed. The famous rainbow trout, as I have seen it, is a black coarse beast with a hectic flush on its side as though it had a fever, and I think if anglers generally could see this fish they would be of my opinion.—H. R. G.

Fishing in the Edisto.—Granitoville, S. C., May 15.—For the past fifty hours the mercury has averaged 58deg., an unheard of thing for this time of year in this latitude. Fires are in order, windows are closed, "lightard" is in demand; but we are enjoying the change in the temperature as contrasted with a few weeks past, as then the mercury was ranging up in the nineties. Northern visitors, on account of the cold snap here, in most instances deferred their flitting toward the "ice-bound bays" of the frigid zone, preferring to remain just a trifle nearer the equator; in consequence the heart of ye hotel and boarding-house keeper is made glad. The hotels in Aiken have been fairly patronized the past winter. Aiken is a sort of half-way house between points North and Florida; many people bound ultimately for Florida come South in the early season, say November, stay a few weeks, and go on to the land of flowers, returning in early spring to Aiken; many remain until from the 1st to the middle of May. There are, of course, people who stay in Aiken the whole winter. Why this is I am unable to say, unless, indeed, it is because they are in the habit of spending their winters there—there are so many other places far more attractive now opened to the average visitor, and as healthy. To the sportsman Aiken has no attractions, that is, in the immediate vicinity. Should he find himself there, though, and make the acquaintance of the local sportsmen, he may be able to make a trip to the Edisto country for deer, and at this time of year will find good fishing in the Edisto. Just now fishing is nil. Early last week Mr. S. Glies and party made an excursion to Wise's Pond, and in about eight hours took seventeen black bass, the largest weighing only seven pounds, a small fish for these waters; the whole catch was considered poor, taking into consideration the time employed and the number (four) engaged. Mr. Glies is a believer in the moon, and says the moon was not right; at any rate, the wind was high, which of course interfered

black bass fishers. Main-strength tackle is used: the numer ous sags and brush in these waters will not admit of the finer play of the reel and bass-rod proper, but still, with the tackle here used, a certain amount of play is necessary to bring these ten and twelve pounders to gaff.

DICK SWYFELLER.

DICK SWIVELLER.

DICK SWIVELLER.

DICK SWIVELLER.

DICK SWIVELLER.

DON'T DO IT.—Burlington, Iowa,—I wish to call the attention of my brother anglers to what may appear to some of them a small matter, but when fairly considered it is a large one. This is a correct nomenclature of the tools and accessories of their craft. It is next in importance to having correct names for their fishes. Brother anglers, don't, I beseech you, don't call your rod a "pole." Don't deall your rod a "pole." Don't deall your rod a "fish basket," if you carry one. Don't degrade the lily pads by calling them by the vile name of "splatter docks," not a recla "spool." These terms are often used by men who know better, but retain them from early associations. As a gentleman is known by his speech so is an angler, and no matter how finished an angler you are, you will make a bad impression upon a stranger who hears you speak in these outlandish terms, the same asi fy ou saw a well-dressed man, who looks as though he ought to know better, eating off his knife, or committing some other outrageous breach of manners. It is the small things which go to make up the life of an angler as of any other man, and too much importance cannot be attached to his naming of his tools. When the rural editor speaks of "some fellow with a ten dollar fish pole who didn't catch any fish," we at once know that the line was written by some one who makes no pretentions to being an angler, for if he did he would never apply the obnoxious word to anything but a sapling fit to thrash beans with. I notice with regret that some tackle dealers, who certainly must know better, advertise "fish baskets" when they mean creels. Every trade and profession has names for its tools and implements, and the angler is not behind in this matter. Therefore let us use the right names, and don't, O! don't, use the wrong ones.—Peter

Fish Laws of South Carolina.—The General Statutes, Chap. Lil., provides that at no time of the year shall there be any permanent obstructions of any kind or nature whatever in any of the inland creeks, streams or water, to the free migration of fish. A close time, from the setting of the sun each Thursday to its rising each Tucsday, during which time all seines, nets, or any plan or device for stopping or taking fish other than dums for manufacturing purposes shall be removed. All persons owning dams which prevent fish migration must creet fishways. No poisonous impurities must be cast into streams. The Commissioner of Agriculture is charged with designating the fish sluices and with laving them out. No person must keep any fish trap or other device for taking fish, or fish with a net within eighty yards of any dam erected by the State in which there is a fish sluice. No person shall take fish from the net of another with intent to defraud. In the counties of Horry, Marion, Darlington, Clarendon, Chesterfield, Georgetown, Marlboro, Williamsburg and Richland it is unlawful to fish with gigs or set traps, or to shoot fish with a gun in any of the fresh waters between May 1 and Sept. 1. No person shall fish in any private pond where fish or oysters have been planted, without permission of the owner, nor damage them in any way. No person shall take tout by impregnating the waters with poisonous or deleterious substances. Heavy penalties are attached to all these offences.

TROUTING ON THE ROCKY SAUGEEN.—A Canadian local paper says: "Mr. Buchanan, of the Bank of British North America, has received from Mr. J. A. Munro, of Durham, a speckled trout, caught by him in the Rocky Saugeen, weighing three pounds eight ounces. The speckled beauty was admired by many to-day. This catch augurs well for the excellence of the fishing at the Saugeen this season, and fishermen who patronize W. E. McAllister's botel will-find a genial host, and a skillful guide to the pools where these patriarchs lurk." A correspondent writes us from Brantford, Ont., that he spent a week at the Saugeen last year, and "had all the sport that I wanted, having filled my basket on two different occasions during that time. Of course I did not get any as large as the one referred to in the paragraph, but I got quite a number that weighed from one to two pounds. The Saugeen is in the county of Grey, Ont., and has now railway communication. The hotel accommodation is good, and the landlord, W. E. McAllister, a veterau sportsman, is only too happy to devote all his spare moments to guiding his guests to all the best fishing places."

MEACHAM LAKE.—Messrs. James Geddes and Reuben Wood have returned from Meacham Lake, Franklin county, N. Y., whither they went to take some rainbow trout eggs to Mr. Fuller, the fishculturist there, and to fish. There was ice on the lake May 2d, and an average nightly temperature of twenty-five degrees, but bright sunny days. In the outlet each rod took about twenty-five trout per day, mostly with the fly. One day they fished in deep water with the minnow and took thirteen lake trout. Mr. Fuller begins to see the results of his plantings in this lake, and his hotel is reaping the reward of his sowing. The fishing was quite good when they left there on the 17th. Their trip was made a little earlier than usual on account of the trout eggs, which had begun to hatch when they left.

Salmon on the Coast.—On the 12th a salmon weighing nine pounds was taken in the trap at Magnolia, Essex county, Mass., and sold at fifty cents per pound at the trap. A few days after they were taken in considerable number about Care Cod, as many as twenty-five in one day, near North Truro. These salmon are exceptionally fine ones and weigh from six to twenty pounds. Mr. Blackford has received many of them at Fulton Market and they sell readily at one dollar per pound. It would be interesting to know if these fish are froit those planted in the Connecticut River and are now going south preparatory to their summer ascent into fresh water, or if they belong in Maine and are going north. going north.

DEVIL-FISI.—The Tampa (Fla.) Tribune says parties from that place last week capured a moustrous devil-fish in the bay after a six hours' chase. The head and tail were brought up to town. The mouth is three feet wide and the captors say the flesh was cighteen or twenty feet across. It was their intention to skin him, but before the flesh could be towed to shore the sharks had fed so ravenously on it as to defeat that purpose. Its estimated weight was between 2,000 and 3,000

pounds. The name "devil-fish" is applied to a large verte-brate belonging to the ray family, and closely related to the skates. It is the *Ciratoptera vampirus*, Mitch. Gill., and not at all related to Hugo's monstrous octopod.

Sturgeon Roe as Bart.—Philadelphia, May 14.—Our anglers who can abide that most filthy of all bait—sturgeon roe—have begun its use in the capture of the rock or striped bass, which runs up our rivers every spring with the shad and sturgeon. It was always a mystery to me how such bait could be kept on the hook. The anglers who use it can be seen at early morn weading their way to Dock street wharf—where the sturgeon boats land and clean their fish—for a day's supply of this strong yet taking lure. At the wharf at Dock street, where much of the offal from the sturgeon cleaned there is thrown into the river, large schools of both perch and small rockfish are attracted, and the place has become a favorite one for these roe-bait anglers.—Homo.

The U.S. Fish Commission.—By the burning of the hotel at Wood's Holl, Mass., which was occupied last summer by the United States Fish Commission, it is probable that the commission will not readezvous there this year, as was expected. Another locality is now being looked up, which will not only allow the taking of specimens and the study of fish, but will also give lodgment for the staff of scientific experts attached to the commission. It is probable that Greenport, the extreme northeastern point of Long Island, may be the place selected for the work to be accomplished this year. plished this year.

A Swallow on the Fly.—New York, May 20.—While fishing on the waters of the Amityville Club, yesterday, I noticed that a barn swallow fook a great interest in my flies, following the cast and hovering over the water where they following the cast and hovering over the water where they fell; it kept this up for several minutes and at last took the second dropper, a "Beaverkill," in the air. It fluttered about sometimes in the air and sometimes in the water. I recled it in and landed it, and it is now at Mr. Bell's, being mounted with the fly in its bill, just as it was caught.—W. Holder-

Information Wanted.—We have been troubled to recall which of the famous opera singers who have visited this country it was that so resembled a shad. Our office boy suggests Matilda Heron, but she was not a singer. We thought at first that it might be Grisi, but there is little adipose matter about the shad. It might be Alboni, but perhaps some reader can correct us if wrong.

THE "BLUE CAT" OF TEXAS.—Concerning this fish Prof THE "BLUE CAT" OF TRAS.—Concerning this fish Prof. Jordan writes us, for the information of our pleasunt correspondent, "N. A. T.," that it is the *Icalurus furcatus* instead of *I. punctatus*, as given in our issue of May 11. The former has a smaller eye, placed further forward in its head than the latter. Its head is small and its anal fin is much longer than that of most catfishes.

An Angling Dog.—Warrenton, Va., May 13.—I have just received information from our county treasurer that he has a young hound dog that has the habit of fishing in a stream near his house. Yesterday the hound brought to the stream near his house. Yesterday the hound brought to the house a fish caught by him and measuring some ten or twelve inches in length.—R. H. D.

Chambersburg.—The bass fishing resort alluded to in our issue of April 20 is on the Potomac River, thirty miles from Chambersburg, and not at the latter town.

MOOSEHEAD LAKE.—The ice passed out of the lake May 18, and the fishing season has opened.

NOTES ON THE BREEDING, FOOD AND CAUSE OF THE GREEN COLOR OF THE OYSTER.

BY JOHN A. RYDER.

NOTES ON THE BREEDING, FOOD AND CAUSE OF THE GREEN COLOR OF THE OYSTER.

BY JOHN A. RYDER.

No mollusk known to naturalists, it appears, is consumed in such vast quantities as our native oyster, the Ostrea virginiana of systematic writers, hence the great economic importance and the scientific interest which it has receutly awakened. It is immeasurably superior in flavor, size, and vigor of growth to the native oyster of Europe, and is simulated and approached only by one old continental form which I have seen and which is probably the Ostrea rostratic of Lamarck. The first attempt made in the artificial impregnation of the eggs of this noble mollusk was successful in the hands of our countryman, Professor W. K. Brooks, of John Hopkins University of Ealtimore, who, in 1880, published a remarkable memoir on the subject in the annual report of Major T. B. Forguson, one of the Fish Commissioners of Maryland. Professor Brooks's triumph was, however, not as complete as might have been desired, since his investigations have not yet chabled us to propagate the cyster by purely artificial inethods, but his success was so much beyond what was attained by Dr. Davaine in his attempts at the artificial fertilization of the eva of the European cyster in 1851, that Brooks's achievement marks the most important era in the history of the subject. Others, as well as the writer, have repeated his experiments with more or less success, and the latter has been enabled to work out a portion of the developmental history of Mya arcauria, the common clam, "soft clam," 'long clam' of the North, or 'mananose," as it called further South, from artificially impregnate eggs.

An earnest, and it is to be hoped, successful effort, is being made by the United States and Maryland Fish Commissions to introduce the most approved French methods into the waters of Maryland, and to supplement these by even more advanced processes, if practicable. The results of the observations and experiments of the writer 'a more complete catalogue, embractions o

nothing, and the account as given by Brooks for the American, and Salensky, Gerbe, Fischer and Davaine for the European species, with little qualification, remain the European species of young biralves, working, however, upon the voung been continued some valuable researches in regard to the development of young biralves, working, however, upon the young development of the oyster, but they revertheless throw considerable light upon the mode of formation of the gills, upper gill-chambers, liver, muscle, foot and nervous system of the great group to which they both belong. Hatschek's observations show that the conversion of a part of the velum or ciliary crown above and below the mouth into palps and gills, as held by Lankester, does probably not take place. The occurrence inner side to the month, as observed by the writer in "spat" one-eighth of an inch in diameter, was supposed at first to confirm Lankester's view, but Hatschek's researches have made such an opinion untenable. The physiological function of these bands was, however, clear; by the vibration of the filaments composing them they establish currents which hurt the microscopic food of the surrounding water down into the purpose as the velum adolume; the neutron of the filaments composing them they establish currents which hurt the microscopic food of the surrounding water down into the purpose as the velum adolume; the neutron of the control of the surrounding water down into the purpose as the velum adolume; the neutron of the control of the contr

side of the animal, as asserted by Davaine, nor is it worth while to more than notice Home's error with regard to the water-chamber above the gills, which he regarded as the oviduct

At the time the oyster is full of spawn the generative organ completely envelops the viscera, diver, intestine and stomach! except a small portion at the anal end of the intestine and the head end of the visceral mass. All of the superficial ducts trend toward and join directly or indirectly the main duct on either side of the body, into which they pour their products as the latter are received from the immense number of follicles in which they are matured. We may repeat that at no time do we find the generative organs quite undeveloped; if they are not apparent to the eye in winter, this sections show the ducts and microscopic rudiments of germinal foll-selles as a network of strands of minute germinal cells, which traverse superficially in all directions the coarse connective tissue miscalled the "fat." in which all of the visceral organs of the animal are embedded. As the breeding season approaches the minute germinal cells of this network of rudimentary reproductive cells commence to grow, until they attain the development observed in the animal when full of ripe spawn. Some investigations conducted under the anspices of the Dutch government indicate that the structure of the generative organs of the European oyster is not as has been supposed strictly follicular, but that they may rather be regarded as a mass of anastomosing tubes of irregular caliber. The complete proof of this has been developed by the writer in the course of investigations carried out upon our native oysters, in which the generative organs were very immature during the winter season. Both Brooks and myself have species of the generative follicles as shough they had been elearly made out: it now appears that we will be compelled to modify our terminology somewhat, in the face of the fact that I have sections of the immature generative organs which scholars i

off in the act of hatching in the former cases. As soon as it has ceased to rove about in the water and has fastened itself to some other fixed object, it has attained the style of development known to systemen by the term "spat." Our researches isee Maryland Report, 1831) show that the dimensions of the firy of the American oyster at the time of its fixation when it becomes "spat" is about 1-80 of an inch, and that at that time the valves are characterized by a very remarkable symmetry, which is departed from as soon as the growth of the shell begins in its new fixed position. The manner in which the fry affixes itself to foreign objects has not been learned, but it is very probable that this is accomplished by means of a larval byssus. Such a conclusion appears to be warranted from the fact that the young of most of the allies of the cyster are provided with a byssus or threads for their temporary anchorage, such as may be seen very strongly developed in the adult salt-water mussel, the numerous threads in this case being very strong, serving to hold the animal very firmly to any support it may have chosen.

numerous threads in this case being very strong, serving to hold the animal very firmly to any support it may have chosen.

All theorizing as to the mode of fixation aside, however, it now becomes a question of the most profound importance for us to endeavor by experiments to maintain artificially impregnated oyster eggs alive for a long enough time after they begin to swim so that they may attach themselves permanendy. The experiments of those who have hitherto worked upon the development of the oyster have shown us that this does not yet appear possible. Various forms of apparatus have been tried with indifferent success. The experiment of using bibulous paper diaphragms through which sea-water was allowed to pass, at the same time not allowing the minute eggs of the oyster to escape with the former, was not found to answer; the pores of the paper soon became clogged with fine sediments os as to stop the flow of water and its renewal over the eggs. Bolting cloth does not have the meshes fine enough to confine the eggs, besides it is expensive and not durable. The use of a membrane of filtering paper between single thicknesses of fine nickel-plated wire cloth, forming the bottom of the hatching box, which is placed inside of another box, in which the water was made to rise and fall alternately by means of an intermittently active siphon of wide caliber, the supply being carried into the outer box in a constant stream through a smaller pipe. The oscillation of the water level in the outer box so arranged was depended upon to change the water in the inner boxes with the porous bottoms containing the eggs. The same difficulty presented itself, however, and the porous bottoms of the hatching boxes soon became impervious, owing to the swelling of the fibers of the paper, as well as on account of the accumulation of slimy sediment in the substance of the latter. The othflow from the inner hoxes was then impeded from the same cause, and as the siphon emptied the outer box the water in the inner one would not fall qui

our experiments have or order down completely, and all the results so far reached with such apparatus have not been of sufficient value to make it desirable to repeat them, although conducted with the help of three different forms of apparatus.

Recently, Professor S. J. Smith, of Yale College, has succeeded in incubating the eggs of certain crustaceans in shallow plates without changing the water at all, but by simply areating and keeping it in constant circulation by means of jets of air playing constantly upon its surface. This node of incubation appears to fulfil the requirements of the case fully, as far as I can now see, and it will be of the greatest importance to test this method at the earliest possible opportunity. By itsues we will be enabled to avoid the loss of eggs which would follow from the use of any method in which there is a current of water constantly running in and flowing out of the incubating contrivance, besides we would avoid contact with poisonous metallic surfaces, be enabled to keep down the temperature of the water by slow evaporation and prevent putrefaction by means of rapid oxidation.

Should we be able to artificially incubate the eggs of the cyster and keep them alive until the time when the embryos attach themselves to foreign objects we will have attained such a success as will probably never be paralled in fishculture. The artificial impregnation of the eggs of the cyster may be accomplished to the extent of thousands of millions; and should it be found possible to keep those hosts of young alive until they had passed certain critical periods of their embryonic existence we would have practically succeeded in adding so many millions of spat to those already existing, from which seed might be supplied for the foundation of extensive beds where oysters had been previously unknown.

Brooks, in carrying embryo oyster cases its wandering habits, its valves measure one-eightieth of an inch in their longest diameter, we have yet to find out how old it is when of this size. When we

embryo.

With the finer questions of the anatomy of the embryos we

examination to learn the nature of the attachment of the embryo.

With the finer questions of the anatomy of the embryos we have little to do—in fact, I do not see that they will help us much in the comprehension of how the hatching process is to be conducted, which goes without saying, however, that the experienced embryologist must be expected to determine whether the development is progressing normally and health-fully. When once we have achieved what has been indicated above, the embryologists will have an abundance of opportunity to make out the finer details of structure; and let us remark here, in regard to the oyster, one of the most accessible of animals, that much still remains to be done by both the anatomist and embryologist.

Whatever may be the form of the apparatus which will finally be used in artificial oyster culture, it will also be necessary to provide some sort of cheap and effective method to favor the attachment of the young fry, in the shape of some substance or objects which may be transferred to nurseries or cages in open water where it is to undergo further development. Clean pebbles at once surgest themselves as a cheap material, which can be graded to the right size through screens of the proper mesh. What is most suitable, however, will have to be learned by experiment.

The special merit of the proposed method of artificial culture from the egg upward, would be that we could probably do without the cumbrous tiles, slates, etc., covered with mortury used as cultch to a large extent in France. In fact, if collectors are to be used at all after the French mode, it would appear to the writer that it would be just as well to use old oyster shells and the cheapest possible materials strewn over arable bottoms near productive spawning oyster beds, as is pretty extensively practiced on the coast of New England, especially Connecticut, and to some extent in places on the Cheapeat possible materials strewn over arable bottoms near productive spawning oyster beds, as is pretty extensively pr

expensive than in continental countries. Not only is this objection valid, but a still more serious one is the uncertainty of the "set" of spat which may catch on any sort of natural or artificial culled. In some seasons the collectors will be coverenowed, in others no spat will be found to adhere.

The same element of risk is encountered in the use of old system shells as cultled for the spat, and, as I have been told day oystermen, several thousands of dollars' worth of shells may be strewn upon good oyster bottom on which not a single spat will be found to adhere, thus involving a loss of both material and labor. I do not see that any method in which tiles or mortar-covered slates are used will be a particle more likely to afford a nidus for spat than old shells, or the cheapest kind of cultch, except in some places where the latter is liable to be covered with mad or sediment.

This uncertainty of result can, it appears to the writer, be evereome by a totally different method of procedure, like that already outlined. We must have the temperature of the water and conditions of the articulally fortilized and confined embryos under control. The uncertainty which has hitherto attended ostraculture must disappear in the face of intelligent experiment, and it is to be hoped that in a few years more we will hear of oyster nurseries or incubating establishments in successful operation where millions of spat will be annually bred from artificially impregnated eggs to be sold as seed to planters who will enter upon the business of ostraculture on an entirely new adjectivity in the constitution of the constants.

REPORT OF THE NEW HAMPSHIRE COM-MISSION.

REPORT OF THE NEW HAMPSHIRE COM-MISSION.

THE Fish Commission of New Hampshire is, like that of Maine, a Commission on Fish and Gome, and we have just received their report for 1881-2. We will, in this place, only take up the portion of it which treats of the fisheries.

They report that in no year since the opening of the Merimae River for the ascent of migratory fish have so many salmon passed the fishways at Lawrence and Lovell, and reached the waters of New Hampshire, as in the past year. Lawrence is the only place at which anything like a fair estimate of the number which pass through the fishways can be made. Here the water is shut off for twenty minutes twice a day during the run. Last summer the first salmen was seen. June 7, and from this date to the last of July, when the last one was seen, seventy-two were counted. Considering that the fish move more at night than by day, and that more water flows through the shways at night, when the mills are closed, the Commissioners feel warranted in believing that many hundreds, and possibly many thousands, of salmon secended the Merrimae in the senson of 1881.

Mr. Fowers, who is Commissioner and Singerintendent of the hatchery, report is that the 60,000 eggs of salmon mentioned in his last report hatched with a loss of 8 per cent. In December 1890, and January 1881, he received 419,500 eggs of the Atlantic salmon, 8 salare, from Buckport, Mc. This year twenty-five salmon have been caught at the hatchery (Fomigwaysasset River) varying in weight from eight to twenty-two pounds; twelve were females and (25,000 eggs were secured from them. Last winter the trout pond was frozen over and mink numeical under the snow and ice, and took over half the breeding lish before he knew it. By November 15, 1881, he had taken 119,000 trout eggs.

Prof. Baird sent 59,000 eggs of california salmon, but they were injured in transportation and only 20,000 were hatched and placed in the Penigewasset. No further attempt will be made with this fish. Experiments have been made with lan

THE DOG.

His History and Qualities.

BY SENEX.

T is a matter of no little astonishment to me that the dog

IT is a matter of no little astonishment to me that the dog, who is more the universal favorite of man than any of the lower orders of creation, should not have found more gifted and willing pens among his myriads of admirers far back in the past ages to trace out his earliest history, his line of descent, etc., etc., with all the completeness and detail which this interesting subject deserves.

The horse, the most important to man of all animals that are used as beasts of burden and of draught, has received his full share of attention from his fond admirers in all countries of the enrit; his history and achievements from the remote ages, both for riding and for drawing carriages, as well as for other more many of the enrit; his history and achievements from the remote ages, both for riding and for drawing carriages, as well as for home many of the market may be a subject of the enrit; his history and achievements from the remote ages, both for riding and for drawing carriages, as well as for home many and pleasure, the chase and war, have become as household words wherever this animal is known and recognized. "Tell me," says Buffon, "the horse of a people and I will tell you its morals and institutions."

Mr. Tonssend, in his "Passional Zoology," looks upon the horse as the personification "of the aristocracy of blood, of the warrior caste, because all societies, alas! must pass through the oppression of the warrior caste."

While I cheerfully accord all to this dignified animal that his warm and culozistic advocates claim for him, I cannot but accept the excellent and trite observation of the lastnamed author, "that the better we know man the more welcarn to honor and esteem the dog," In his delightful treatise, translated by Dr. Lazarus, Mr. Toussend shows with remarks able vividness the intelligence of brutes and the relations it bears to the intelligence of once. Now, Mr. Toussend was a true gentleman and a sportsman of the lighest order of excellence. He belonged to the school of Grarar and Cumming, and a

of the major mode." Better than any naturalist that ever wrote before him, for he sought to unfold the inner attributes of canine nature and raise them to a higher plane, he describes the dog as founded in "every society like ours in individual property, the vigilant guardian and heroic defender of what is called public order and property." "When a citizon," says he, "with homse voice and tattered garments has a look suspicious for property, the dog stops him rudely to ask his passport. But as the majority has its principles the minority also has its own, and both have their dogs, whom they have taught to venerate their institutions. The dog of the thief will then profess on matters of public order and commerce, principles diametrically opposite to those of the magistrate's dog. The dog discusses no questions of right; his duty is to obey and keep quiet; he obeys without nurnuring. He is one of the finest conquests ever made by man. He is the lirst element of human progress, and without him, says Toussend, man would have been condemned to vegetate eternally in the limbos of the savage state." With what an eccentricity of genius, with what graphic powers of delineating the nobler attributes of the dog, has Toussend displayed in his power of giving in a fow sentences all the characteristics and values of man's watchful and faithful companion. How touchingly sublime is his description of the dog's sympathetic intelligence toward man in the station of slave and master, and what a grand exposition of the reasoning power of brutes and the relation it bears to the intellectual power of man.

If we compare the dog of the past, with all the distinguishing attributes with which he has been clothed by some of his enthusiastic eulogists, with the dog of the present day, we see that he is continually advancing in the plane of intelligence and affection, which, fostered by careful education and breeding, is making him more and more a valued part of man's necessities. We see all around us those faithful glimpses of superior a

must go far toward the adjudication of this important subject.

That the dog should by nature develop those superior qualities of intelligence that belong to the higher grades of culture, seems to depend upon his constant and close companionship with man. He is present with us at the first dawn of light, accompanies us from the cradle to the grave, and lives with us closely upon the footing of our fellow-man. Notwithstanding this intimate relation to us, and ever faithful, obedient and protective of our interests, and zendously guarding us even to the exposure of his own life, he has been typified by the unappreciative by the most uncomplimentary terms; and among such he has been the standing similitude for things that are mean and disgusting, the type of contentiousness, avariec, filthiness, impudence and gluttony. This is not to be wondered at, for they are those of our human beings who delight in making their fellow-man miserable, who take special satisfaction in imposing upon him bodily harm, and torturing him in all manner of ways; for saith the poet—

"Man's inhumanty to man Maisra counters thusands mourn;"

"Man's inhumanity to man Makes countless thousands mourn;"

take special satisfaction in imposing upon him bodily harm, and torturing him in all manner of ways; for saith the poet—"Man's inhumanty to man Makes countless thousands mourn;" and these are evils "which against another done, repentance makes no satisfaction to him that feels the smart," and from such examples how can the poor dog hope to escape. But to the everlasting credit of his friends, how errnestly and beautifully has he been defended from these unjust supersions, by those who know him botter than his maligners, by those who reason from a stand point of observation, and not from an incensed spirit of malevolence and hatred, is the dog called filtly! He is much less so, says Mr. Blaze, "than certain men of your acquantance and mine." Is he called greedy! says the same advocate, "i should like to see you hungry and with a single mess for your dinner, and have another attempt to snatch it away."

He has been accused of treachery by no less authority than Saint Chrysostom, fawming on you, says he, "when you face him and slyly biting you when your back is turned." This is a libel upon his idelity and other virtues, and corresponds more closely with the character of "many men of this description, but never a dog." Whenever treachery is discovered in a dog, it is always the result of the master's periddy, rather than the creature's quality. Is he a thief? No; a thousand times less so than man, for but teach him the difference between meum and teum and he is more faithful and protective of a trust confided to him, than can be said generally of the lords of creation. He is too often made the scapegoat of man's cupidity, and has been compelled frequently to suffer for the sins of others; for it is his nature, when proporly directed, not only to prevent property from being stolen, but like a faithful detective, to recover it when lost. Talk to me about a dog's want of loyalty to his master, a thousand times more true is it that the master's perfly has degraded the higher attributes of the camine to his own sordid

a late writer, "the unintored savage has left the distinction to civilized nations."

But of all the cruelties that a higher civilization has heaped upon this faithful, unoffending friend of man, there is none that will compare with the inhuman, brutish and useless habit of making him a devotee to the cause of science. In the interests of humanity, perhaps, which is paramount to all other earthly considerations, and for the purpose of clucidative of the control of the purpose of clucidative control of the control of the purpose of clucidative control of the control of the purpose of clucidative control of the control of the purpose of clucidative control of the control of the purpose of clucidative control of the control of the purpose of clucidative control of the control of the purpose of seven the discovery of which may unfold the mysterious avenue to discovery of which may unfold the mysterious avenue to discovery of which may unfold the mysterious avenue to discovery of the control of the purpose of seven that the control of the strictest investigation and scientific research. To wantonly butcher hundreds and thought of the control of the strictest investigation and scientific research. To wantonly butcher purpose of the control of the suffering and advance of the coveries that control of the sufferings and agonies of its thousands of the suffering and agonies of its thousands of martyrs. I am rejoiced to know that England, ever in the coveries that ever were brought to light by these cruel, buser of the sufferings and agonies of its thousands of martyrs. I am rejoiced to know that England, ever in the suffering the control of the sufferings and agonies of its thousands of martyrs. I am rejoiced to know that England, ever in the suffering the control of the suffering and agonies of its thousands of martyrs. I am rejoiced to know that England, ever in the suffering the suffering the purpose of the suffering that pertains the suffering the suffering that pertains the suffering the suffering that pertains the

that suggest the different traits in the various species of the canine race.

Thus the bulldog, with his deeply wrinkled face, his protruding lower jaw, turned upwards and exposing his strong, projecting teeth, his nostrile expanded, suggest the peculiarities of that species for pinning his game and makes him only fit for the bloody arena of contention, or to bait the bear, the bull or the liou.

The long, lithe body of the greyhound, the strength of back muscle, and the unusual length from hip to hock denotes fleetness and elasticity of movement.

The firm and closely knitted limbs of the setter, the upright forelegs, the strong inward setting hocks, the full development of muscle throughout, the straight feet and upright legs, and that character of body expression which gives strength and elasticity, makes him the covoted friend of the sportsman par excellence.

The low, short-legged, connects body of the spontial.

exactlence.

The low, short-legged, compact body of the spaniel, with good loins, full bone, and possessing courage, endurance, quickness of movement and a full flat coat to withstand wet and cold, are some of the finer qualities that pre-eminently fit this valuable dog for the thorny coverts and tangled thickets that are frequented by the woodcock and partridge.

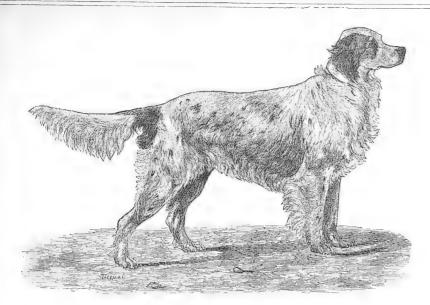

eminently fit this valuable dog for the thorny coverts and partridge.

Lasily the modern hound, who possesses in an eminent degree those remarkable masal traits which enable him to unterpretent the intrincies of the chase to distinguish between conflicting scents, and to avoid the ruses of a fugitive that is fertile in resources and cunning devices, is the variety of tog best fitted for chasing the erafty fox or the willy rabbit.

There are other species of the canine family that hold the position of household pets, who from a long and intimate familiarity with the family acquire a peculiar fondness for children. The gentleness with which they treat their rough and rugged handlings, the attachment they display toward their little infant playmates, prove the possession of an affection for mankind as beautiful as it is unselfish.

By proper education and training he may be brought to any legree of trustworthiness, for by simple observation alone the soon learns to distinguish between those who have and those who have not a right to the premises, and in his courty-yard konnel he very soon discriminates the occasional visitor from the stranger, the habitual innate from the occasional visitor from the stranger, the habitual innate from the vew witnessed the household canine permitting occasional visitor from the stranger from the while the vew witnessed the household eanine permitting occasional visitors to enter within the house, that would fly at the approaching trainp or sojourner with all the venom of an infuriated monster. And this is done oftentimes witnout his master's training or the slightest regard to culture, and proves the natural and innate attributes of the dog for the preservation of the property committed to his keeping.

That variety of the dog that belongs more particularly to the household, and who from time immemorial has been the pet of the social circle, is largely inhoued with the attributes of patience and forbearance, rarely equalled by those of the human family. I have been frequent witness

MR. W. TALLMAN'S "FOREMAN"

bit a King Charles puppy so ficrcely, that while he yelped through very pain, yet no indications of ill-humor could be perceived and the cano-human play went on as full of childish glee and merriment as before.

The lieve it is a true saying, that whenever a dog departs from the excellent traits of canineship heretofore depicted, and which are so closely interwoven with its nature, it is rather the fault of the man than the creature. The educator is more to be blamed than the educated. How often have we seen the noblest qualities of the canine species obtunded and finally destroyed by rough treatment and ill-usage, especially those of a high order of cultivation and sensibility, and finally become distrustful, capricious and, incapable of attachment, and even dangerous. Change owners and if kindness is extended towards him, his innate attachment returns and he exhibits that courtesy and fidelity to his new master that friends or relatives entertain towards each other. If you but fairly gain his confidence and friendship, he is all intelligence, fondness and imperturbable good humor, and places all his happiness in gratifying his master.

[TO BE CONTINUED.]

FOREMAN.

FOREMAN.

Our illustration this week is of the black, white and tan English sotter dog Foreman, winner of second prize in the imported English setter class at the Westminster Kennel Club's late show. He also won second at Pittsburgh last March, his half-brother, Plantagenet, winning first. He is two years old, and is by Mr. J. C. Higgins's Dashing Monarch out of the dam of Thunder, Fairy II. Foreman is a very well formed dog, above the medium size, and bids fair, when mature, to turn out a good one. He is also a capital field dog. The cut is from a sketch by Harry Tallman, and is a capital likeness.

GORDON SETTÈRS.

The cut is from a sketch by Harry Tallman, and is a capital likeness.

CORDON SETTERS.

I HAVE read with much interest the articles in your valuable journal on the black and tun, or Gordon, setter, the adaptability of the present scale of points by which he is judged on the bench to his usefulness in the field, etc., and think there ought to be one class only, as very few dogs can show a clear pedigree back to the Duke of Gordon's kennel, whence their name originated; and even if so, where came his black and tans from? That the existence of black and tan setters did not begin with the Duke of Gordon has been clearly proven long ago; but probably they were selected by him as best suited for a mountainous, rough country.

My earliest recollection of the black and tan, or Gordon, setter was in his native country, nearly forty years ago. He was then a strong, powerful, handsome dog, of medium height, a slashing goer, with a brave heart, and natural field qualities inferior to no other setter—for whom no country was too rough, no day too long, no weather too severe. A drawing-room pet would ill have litted the class of sportsmen that followed the bold and fearless black and tau, which heeded neither fell nor flood, but gloried in his work and went with a will. In this country I shot almost entirely over black and tans, from %2 to 74, using nine different animals during that period—they were not Gordons—having bred the first of them I ever had out of a liver and tan bitch, whose grandsire was a black and tan of great merit, by an orange and white dog. But after getting the color (even by such a cross), I had no breast and feet—strong-boned, rather low, exceedingly museular dogs, with excellent constitutions, and for natural field qualities I have never owned their superiors. I never worked any dogs so constantly and severely as I did them, and do not think I ever had, or even have heard of, any dogs capable of standing the amount of real hard and continued work that they did.

Their general appearance resembled the G

under-sized animal, than to breed a full-sized, powerful animal of the highest quality? In breeding all animals my greatest under-sized animal, than to breed a tun-sized, post of the highest quality? In breeding all animals my greate difficulty has been to get power with quality.

John Davidson.

MONROE, Mich., May 8

BOSTON DOG SHOW.—Granby, Conn., May 8.—Editor Forest and Stream: As I ha! pleged myself not to exhibit any beagles at the late New York Show, I was particularly anxious to make a large exhibit at the coming Boston Bench Show, and was surprised and disappointed on receiving their premium list and rules and regulations to find that there was no class made for champion bengles, and that they were barred from entering the open class. Then again both sexes had to be entered in one class, which seems to me to be a very unwise and unsatisfactory arrangement, as by nature the fennales are finer than the males, and the two sexes should not compete against each other. I also noticed that there were no prizes given—only certificates of awards—and yet the entrance fee is the same as that charged by other shows giving prizes of value, which seems to me to be another unwise departure from usual premium lists. I was not surprised in looking over a recent issue of Forest and Stream to find that the number of entries made are far below the number entered at the late New York Show, and believe other breeders have taken the same view I have and not entered their dogs, and hope before the club holds another show that they will consider the exceptions I have taken and profit by them. I am free to say that I did not feel disposed to aid in making a success a show held under such unsatisfactory regulations, and therefore abandoned my intention of making the largest exhibit of English beagles ever made in this country.—N. ELMORE.

GREYHOUND PUPPIES AT THE NEW YORK SHOW.—Buckingham, Pa., May 16.—Editor Forest and Stream: In your issue of March 2, through the exertions of H. W. Huntington, you published that "the Westminster Kennel Club would give a special prize of a club medal for best English greyhound puppy under twelve months." This prize was awarded under class GG, which you entirely omit in your prize lists. Knowing how willingly you always correct errors, will you please state that this prize was awarded to black English greyhound dog Buccaneer, aged 11 months!—Joseph R. Pierson. (The omission occurred through our writing across class HH, withheld, in such a manner that both GG and JJ appeared to be included. We cheerfully make the correction and add the awards in both classes. Class GG, for the best greyhound puppy dog or bitch, won by Joseph R. Pierson's Buccaneer. Class JJ, for the best Caniche poodle, won by Charles O'Neil's Tramp.]

GREYHOUNDS.—Mr. Lotz, of Chicago, writes to say that he was in error regarding his criticism on the naming of McGrath. Mr. Dawson, of Montreal, writes: "As to Mr. L.'s dog being the best in America, I would be pleased to meet him half way, say in London, Ont., during the next two months, and whoever takes second place to put up a \$25 medal for the next Westminster Kennel Club show, you to determine what breed of dogs is to compete for same. Judges can be had at little expense in London."

A TRAINER, who is well-recommended as competent, intends to start South in a few weeks, and will take a few dogs to train. He will locate in a good game country. For particulars, see his card in another column.

A RIFLE WANTED.

A RIFLE WANTED.

THE committee of the National Rifle Association appointed to select a suitable rifle with which to shoot the international military match has met, with Colonel Litchfield and Generals Wingate and Smith in attendance. The committee appointed as associate members the following named gentlemen: Dr. E. B. Shakespeare, of Philadelphia; L. L. Hubbard, President of the Massachusetts Rifle Association; Colonel J. O. P. Burnside, of Washington, D. C.; Captain H. J. Burns, of San Francisco, and Colonel J. A. Shaffer, of Chicago, Ill. Colonels John Bodine, of New York, and G. D. Huward, of New Jersey, were elected regular members of G. P. Huward, of New Jersey, were elected regular members of mously adopted: Whereas, The riflemen who are to represent America in the International Rifle Match, which is to be shot at Creedmoor in September next, will have to compete no only against the best military shots of Great Britain, but the best military rifles which can be made by the English gummakers; it is therefore Resolved, That the gummakers of this country are carnestly solicited to co-operate with this committee in endeavoring to provide such rifles for the American team as will enable it to meet its opponents upon an equal footing as to weapons.

R. was decided also to apply to the Ordnance Department of the United States Army for help in producing a government rifle that will meet the requirements.

ALBANY, May 18.—The first competition this season in the Capt. John Daly match was shot at Reasselherryck vesterday afternoon. Considering the threatening weather, the attendance was good and the entries numerous. The match is somewhat different from ordinary matches, there being four prizes, each of which must be won three times, the smallest prize being the first, and the largest the fourth. It is shot at 500 yards, with any kind of rifle, and at the ordinary military position, unlimited re-entries being allowed. The match was commenced promptly at two o clock, and from that time until half-past five the bullets were flying to the targets. Forty entries were made, and considering the want of practice the shooting was strong.

Generally, the properties of t

in the hands of the club.—CLIFON.

THE LYNN CENTRAL had a very good day for their shoot Tuesday. Boston and Marblehad were well represented. A strong southest with the brist off to a distance of fifty to seventy yards. The team match was the first on the programme, with seven sweeps at clay pigeons and three at glass balls. The team match resulted in a score of 39 out of a possible 59, McFarland taking the medal score with a handicap allowance. The following scores were the result of the first shoot at twenty birds:

O Neil. 18 Donavan. 18 Donavan. 16 George 17 Bandall. 16 George 17 Bandall. 16 George 17 Bandall. 17 McFarland 15 Johnson. 17 Morrill 15 Johnson. 17 Morrill 15 Johnson. 18 Drown 18 Brown 18 Brown 18 Brown 19 B

ALL IN THE MAKE.

ALL IN THE MAKE.

THE impression that well-setting cutter sails can only be got out of hemp canvas does not seem to be tenable, judging by the following information furnished us by McManus & Son, the principal sailmakers of Boston:

You have made many converts for the genuine cutter rig by your persistence and arguments in favor of the fastest and strest rig affoat. We notice in one of your late issues of Forest and Stratis that a New York sailmaker had to import linen duck to make good yacht sails, which is rather rough on our home industry, the manufacture of cotton duck, acknowledged by the world to be the best and closest fabric for fore and aft sails. There is very little elasticity to hard woven cotton duck; therefore it does not swell and bag in a breeze; furthermore, a good sailmaker can cut any species of sail out of it, including loose-footed mainsails, cutter jibs, etc. If our cutter friends across the water have any advantage over us in speed it is not because they use linen in their sails; it I because they have a better method in cutting, better models, and extreme low weights.

THE RETURN OF COMMON SENSE.—The sloop Vision, Messnalex and exp. N. Y. X. C., will receive about three tons of lead out the keel. We note that a reporter, writing to a turf contemporary, does not think the change appreciable, a statement which will cause smile among yeach appreciable, a statement which will cause from up in the tongeneous ordinary mechanical acquirements cannot fail to comprehend the value of shifting three tons from up in the bilge to the underside of the keel. Lowering three tons some two feet or more, we take to be a very vital change, and if we can judge by the experience of other yachts, the Vision will not fail to benefit materially by the alteration.

MR, WARREN'S CUTTER MAGGIE, FIFTEEN TONS.

MAGGIE, FIFTEEN TONS.

In addition to the record of this cutter, soon to show her fighting flag in our waters, published in a previous issue, we this week add an excellent article on the "lifteens" of Great Britain by the same per. The flustration, from a pen and ink sketch, will self by Grey fair idea of their peculiarities of form and rig. It shows the ship with balloon jib and spinaker, driving along to a quartering wind. The Maggie is one of the handsomest and fairest ever beheld. She is a "professional beauty" indeed, and we are much mistaken if her graceful lines, exquisite sheer, plump midships, bold side and dainty fantaild on to speedily win the bearts of many in Boston, and soften even unto mediting the hardened involerate who now spurms such even unto mediting the hardened involerate who now spurms such conjured up in a fit of national jealousy against a type so downright able and meritorious as the cutter appears with prejudice once laid side. As in hull, so in rig, Maggie is sweet to the eye, a picture of Jaunty pose and saucy "tackle-me-if-you-dare," the artist will dwell on with lingering thought, and in bulld and fittings the just pride of the sailor, who glories in the staunchness of his ship and her evident ability to pull him through the roughest and the worst.

Her tags on the forth of the sites and stays. We have an inkling that Boston will take kindly to Maggie, and improve opportunities by adopting what is worth copying from a flyer, full-blooded from keel to truck, from nose to archboard. Should Dan Hatcher's pretty lassie fall into hands who know her whims and foibles, we warrant her record will be as brilliant in American waters as it has been about her ruged nalive coasts.

Haggie is 43ft, stem to post on deck; beam \$ft, 8in.; depth of hold

8ft. and draft 8ft. 6in. She had upon launching 5 tons of lead on the keel and ten tons inside as "King Dan" was somewhat averse to outled the state of the lead o

LIVE STARTS.

LIVE STARTS.

LOREST AND STREAM having brought into prominence before the public the necessity of replacing the juvenile methods of starting now in vogue by something more manly and sailorilike, an estimable but antiquated turf contemporary tardily falls foul of the same subject. As might have been expected, it makes the usual mess of things, confounding anchor starts with the simultaneous flying get-away to one and the same gun. As no one has ever proposed reviving the ancient New York custom of clearing from moorings, our contemporary's belabored effort at filling space at the expense of such a start is of no consequence, and not worth notice. For the

benefit of such poorly informed journals the following explanation is vouchsafed. It has been given before in these columns to so you have a such as the properties of the pro

as our contemporary believes. Before again venturing upon a cru-sade against its betters, our contemporary should acquire a little knowledge of the subjects it pretends to criticise, just for its own

credit.
It is but natural that the old school of unprogressives whose conceptions of the grand sport are circumseribed by the narrow limits of Long Island Sound should not view the new start with favor. Innovation of any sort is to them as a red rag to a bull. But as cutters have become very popular in spite of their opposition, so too will the sailor's start crowd out old fogies in the end. Forest and Stralam was the first to advocate the change, and having taken the one-gun start under its wing, if we do say it ourselves, is a good half of the battle won.

THE FIFTEEN-TONNERS OF GREAT BRITAIN.

manifer its wing, if we do say it ourselves, is a good half of the battle won.

THE FIFTEEN-TONNERS OF CREAT BRITAIN.

MIRANDA killed schooner-racing in British waters: Vanessa pretty meatly frightened away all twenties until Enriqueta and Challenge, precursors of Sayonara, Louise. Freda and Amethea revived the interest in one of the most sporting classes. The little fiver-Freda, performed the same feat among the small fry; and at the present time the fifteen-ten class in Great Britain is practically represented by the celebrated Maggie, one of King Dan's most beautiful productions, whose arrival in our waters is to be one of the events, if not one event of the forthcoming season. Maggie is a fiver—there is whose munerous laurels received such additions during the past year. Maggie is the acknowledged crack of her tonnage; not one of the vacints that made a name for themselves before she flaunted her sky-blue and black rlag was any good to her. Torch, victor in half a hundred well-sailed races; Hdegonda, her elder sister, which could history-four winning flags; Dudo, another of Hatcher's and a danger-one wellnigh invincible, and five times did the long, graceful hull of the third of the production of the recover of the first state of the recover
steel by the Milwail Fron Shipbuilding Co., a year later, and which and also raced on the East Coast, removed to the Mersey and Irish wairs, where she played a minor part, but pretty regularly lost her Chile was one of D. Fullon's boats, and fairly fast. She was, like Ripple which preceded and Quickstep which followed her, on the light displacement principle. She made her appearance in 1863, heading her class that year, and raced till 1878 with varying success, her average being lower than that of any of the other noted fifteens. The year 1864 was a notable one in the annals of the class, as three wy acids made their number, one from the great yard at Fairlie, on the power of the control
in later years she entered and salled, nor always unsuccessfully, with such fast twenties as Vampire, so long the terror of the coast. Varaessa, who knocked "the Bat" into a cocked hat, and was herself served the same sauce by longer boats—Fleetwing, Nadejah and Victoria (ex.Madcaj).

Torch was built in 1834 by Fife, and her dimensions then were as follows: Length b. p., 43ft. Dim.; beam, 8t. 1lin.; draft att, 7ft. 6in. Toroward dimensions then were as follows: Length b. p., 43ft. Dim.; beam, 8t. 1lin.; draft att, 7ft. 6in. Toward and the control of the balance in iron, cast to it. She and Klimeny (39), built the same year by Fife, were the first yachts, unless I am much mistaken, which carried a lead keel. Torch was first owned by Messers. A. & D. Finlay, who always salled her themselves with a crew of amateurs.

Dudu was built by Hacher in 1841, for Messrs, Baldock and Rudge, and the East and South coasts being the scene of her many triumphs, which culminated in 1876, when she attained the covteet honor of heading her class with 12 prizes for 17 starts, and a total of .2270. In her first year she met Vampire, Statuclia, Gipsy and Folly, the latter long a famous Southern twelve, and latter on she had to fight Queen, Helegonda, Aveyron and Surge, in 1876 and 1877 she had also to contend with the twenties, Vanessa, Fleetwing, Butternly and the Sastands, the bast of the trio, was built by Aldous, of Brightlingsea, for Mr. P. Bennett, and till the end of 1897 she raced on the Thames and East Coast, having Vampire, Dudu, Queen, Dione and Octoroon as her most frequent rivals. In 1808 ske passed into the hands of Mr. P. Bennett, and till the end of 1897 she raced on the Thames and East Coast, having Vampire, Dudu, Queen, Dione and Octoroon as her most frequent rivals. In 1808 ske passed into the hands of Mr. The class was now fairly established as a regular sport producing one and additions to the vere specified imade, flatether turning out th

an opportunity of crying her special changes of such pieces in the such that the such

Co.ss.
Fairlie first belonged to Mr. R. Ferguson, and in her maiden season
on the Clyde won but one second prize, Satanella taking the first; but
after this she steadily improved, winning more and more races each

year. She went to the South, the Thames and East Coast in 1870, and raced in those waters till the end of 1872. In 1874 she went back to the Mersey and Soutch and Irish waters, where she again raced better and better every year and met all the cracks in her class and not a few of the notable twentles, Challenge, Sunshine, Playmate, Enriqueta, Quickstep, and others, besides the famous tens, Florence and Verve.

Quickstep, and others, besides the famous tens, Forence and Germ. Quickstep, and others, besides the famous tens, Forence and Germ. Queen—which I should have taken up before Fairlie, as she raced for three years previous to the launch of the latther—I am inclined to rank as the best of Hatcher's fifteens. In her very first year she started five times and won every time, heating Dudn, Satanella, Vampire, Octoroon, Algerine, a fine little ten built by Payne for Mr. F. Rosamon, and the crack Polly. She kept to the Thames and South Coast regattas till 1899, when she unfurled her flag in Irish and South waters, having now Mr. W. R. Johnson for owner. She met Vampire, Lizzie. Torch, Venture and Siren, beat the famous Phantom (27), so long the champion light-weight cutter (and which, alas! was broken up a couple of years since at Carnarvon, on the Welsh coast). In 1871 she had to tencounter Quickstep, Leander, a Clyde twentry Kitliwaks, Shadov and Ripple, and her windings diminished. In 1876 she roller, well with Partic, Illegonda, Vanessa, Sunshine and Hinda, taking eight first prizes for sixteen starts. She raced once in 1876, taking nothing, and once again in 1878, when she received a first prize of 420.

Rival, another of Fife's fiftcens, was never formidable. She wee

up her prize-list to something like its former dimensions, doing very well with Farlite, Indegonda, Vanessa, Sunshine and Hinda, taking eight first prizes for sixteen starts. She raced once in 1876, taking eight first prizes for sixteen starts. She raced once in 1876, taking rothing, and once again in 1878, when she received a first prize of the prize for the prize first prize of the prize first prize first prize of the prize first prize first prize of the prize first prize of the prize first prize first prize of the prize first prize first prize of the prize first prize pr

ROCOS CROIX.

SEA CRUISING.—Cruising out on the open is rapidly becoming popular. Schooners acolus, Fleetwing, Nokonis, Norseman, Dauntless, outer Oriva, and steamers Ocean Gem. Namouna, Corsair and Rhada, have recently been down the coast to the southward. Schooner Manaerre is in the Mediterranean, schooner Intrepid is overhauling at Cowes. England, schooner Acte has just left Moston for English waters and many others have been on voyages to foreign parts, while quite a compared to the control of
mission, last Saturday, off West Brighton, S. I. She has had her post shifted aft some 13in, to counteract a tendency to gripe with the boom off. When building we noted a rather deep forefoot to the sloop and expected a hard helm. The action of Mr. McMurray bears us out in our suspicious. Acolus is now as neck as a lumb on her wheel. She is in line trim, and with a spreader lengthened out to 10ft. 6in, and a whacking big housing topmast above the cap looks the thorough bread looft. This sloop was one of the earliest to adopt the control of the carbination of of the carbinat

1882 there are fifty-four. An increase or nve numerous per come in seven years.

MADGE has been appraised by the collecter of Newport at \$1,300 for hull, and \$300 for spars and rigging. What will be done with the tiny crack who opened our cycs has season is not yet certain.

THE TIMES.—Mr. Greely S. Curlis, of Bostom, will alter his schooner to a full fledged cutter, housing bowsprit and running fibs included. McManus & Soo are to supply the new outfit.

NEW CUTTER.—We learn with pleasure that the owner of a Block Island yacht, now in our waters, contemplates soon to lay down the keel of a large cutter. The world moves.

HEEDLESS.—Mr. Warren has given his new 7-ton cutter this name. She will be launched from Driscoll's yard about June 1.

Answers to Correspondents.

Hanufacturers of Fine Fishing Tackle of Every Description. FO! SEA, RIVER OR BROOK FISHING, Rods, Reels, Flies, Leaders, Lines, etc. REPAIRING OF ALL KINDS.

REPARING OF ALL KINDS.

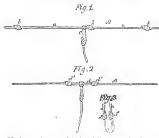

We make a specialty of Wood and Rod Mountings for Amateur Rod Makers. Our Celebrated Bethara Wood is far superior to anything known for making rods, being stronger than split bamboo, and has the spring and elasticity of tempered steel. Prices, 4½ft. long. ½in. 35c.; ¾in. 42c.; ¾in. 48c.; 1in. 65c.; 1¼in. 68c.; 1½in. sqr., 3! each.

Our Bethabara Fly and Bait Rods and Split Bamboo Fly Rods received the first premiums at the Centennial, Franklin Institute and Penna. State Fairs.

Price list of wood and rod mountings free. Our Gragage new Illustrated Catalogue of Fishing Tackle sent, post-paid, on receipt of ten cents in stamps.

SHIELDS'

American Improved Gut Leader CASTING LINE.

My invention consists in adding to a leader a reenforce at the several points where the upper flies
are to be attached, by which the size of the line at
such point is doubled, the result being that the wear
such point is doubled, the result being that the wear
are to be attached, by which the size of the line at
greatly prolonged, and the doubling of the leader
in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper flies of a
cast about a leader of single gut, the latter soon
becomes badly chafed and its enameled surface
worn off
the leader in the act of looping the snell to it
sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is not
sufficiently rigid. By doubling the thickness of
the leader at the point of attachment of the fly
avoid these objections. The drawing Fig. 1 represents a leader as heretofore in use. Fig. 2 is a
while Fig. 3 shows the manner of looping the leader
in the act of attaching the fly. In these drawings,
A, Fig. 1, denotes a leader of silkworm gut adapted
to the purposes of fly-fishing for trout or bass, and
as heretofore made, such leader being composed
of several lengths of gut knotted together, as shown
at 0,0, and the snell attached to the fly being looped
or more points (according to the number of flies to
be used in the cast in addition to the stretcher) an
additional piece of gut A, which I term a "recurree," thus doubling the body of the leader at
such points. This re-enforce may be added in
several large, 2 in which we also and knotted
together, as shown at d' d'.

The casiest way to apply a fly, and the one gencrally practised, both with my leader and those
heretofore in use, is to double the leader into aloop,
as shown at e in Fig. 3, and then apply the fly thy
through the loop of the leader fraw the whole taut,
is in Figs. 18. With his single gut the act of holding
the loop e and detaching the fly shell is often an
onying and tedious, owing to the flexibility of the
eligie gut. By doubling

THE PRAIRIE CHICKEN TRIALS.

THE field trials on prairie chickens, to be held at Fairmont, Minn., next September, are attracting very general attention among owners of sporting dogs. An interesting meeting is anticipated.

Prairie chickens are the most abundant and important variety of game in many parts of the West, and chicken shooting is, in consequence, the principal sport. The dog of the chicken country must of necessity be traided with reference to this particular game. There is a difference in the character of the work generally required of a dog in prairie chicken shooting. Quail take to cover; and under certain conditions of quail shooting, circumscribed range and careful working are necessary. One of the distinguishing characteristics of grouse shooting, on the contrary, is that it is all open work, save in the cornfields, from which may the fates deliver us. These two kinds of shooting are so different that a first-class dog on quail may prove to be deficient when newly put out on the chicken grounds, and a cog that has always been hunted on chickens may not do good work when introduced to quail. The ideal dog is, of course, an animal so trained as to be adapted equally to quail and chicken shoot-It is possible to so train a dog accustomed to Eastern shooting that after very short practice on the prairie he will give as much satisfaction as other dogs that have been worked all their lives exclusively on the Western game. a rule, however, the Eastern dog is handicapped when first put into competition with the Western dog on the chicken grounds; and the latter is handicapped in like manner when first put out in Eastern quail covers.

But a really good dog, no matter on what game he may have been trained, so that his training has been right, when put down to work on new game, will soon adapt himself to the situation and put his best foot forward. A duffer in either kind of work will generally show himself a duffer in the other. Good nose is required in all shooting; it is essential in prairie chicken work, for the dog must often catch a very faint scent. When a dog is ranging rapidly across the wind, the slight odor may be borne down wind to him from a covey of chickens some distance away, and if the dog fails to perceive this, the chances are that on the turn he may either plunge into the covey or else go to the windward of

It is the difference between the two styles of shooting that gives a part of interest to the forthcoming trials at Fairmont.

It is to be hoped that all parts of the country may be well represented, and that the meeting at Fairmont may be so successful that it will be accepted as the mauguration of a series of annual field trials on prairie chickens.

SHAD FRY FOR THE HUDSON.

N the 26th of May the United States Fish Commissioner, Prof. Baird, forwarded a car containing one million shad for the Hudson at Albany. The New York Commission has heretofore hatched and turned out annually a supply of young shad for this river, but this year the appropriation is nearly exhausted and they are husbanding their resources in order to distribute the rainbow and brook trout.

There had been several requests sent to Prof. Baird for shad fry for this river by many who did not wish the season to pass without some attempt being made to replenish the Hudson with this, the most important of its fresh water fishes, but he steadfastly declined until a formal and urgent request was made by Hon. Frank Hiscock, of the House of Representatives, who presented an application from six of the State Senators of New York. He then decided to send a carload.

The car was an ordinary express car and contained fifty milk cans, each having 20,000 fry, with extra cans for water and ice. It was in charge of Mr. Newton Simmons, and was met in New York by a gentleman connected with the commission, who accompanied him to Albany by request of Mr. Blackford, of the New York Commission

At Jersey City the car was transferred by boat to Harlem, and thence to the Grand Central Depot, New York, Arriving at Albany at 9 P. M., it was decided to remain until morning, and a hose was attached to a hydrant and the fry made comfortable thereby. In the morning a small tug took the party half way to Troy, and the deposit was made.

The fish were hatched in the old Armory building, Washington, and their arrival at Albany was telegraphed to Hon. D. McCarthy, Senator of the 25th District, N. Y., who was greatly interested in the deposit.

PIGEON TOURNAMENTS.—The tournament of the Illinois State Sportsmen's Association was held at the Driving Park grounds, Chicago, last Tuesday and Wednesday. The Illinois tournament, open to the world, will be shot to-day, to morrow and Saturday. The tournament of the Iowa State Sportsmen's Association will be held at Cedar Rapids June 6, 7, 8 and 9. The tournament of the New York State As sociation for the Protection of Fish and Game will be held at Niagara Falls June 12 to 17, inclusive. The Missouri State Sportsmen's Association tournament will be held at Sedalia June 13, 14 and 15. The Southern Illinois Sportsmen's Association tournament is set down for June 16 and 17. at Mt. Vernon; that of the Texas State Sportsmen's Association for June 20 to 25, inclusive, at Austin. The Central Illinois Sportsmen's Association presents an exception to the general rule of shooting wild pigeons captured on their nesting grounds, the tournament of this society being apfor September 12 to 15, inclusive, at Jerseyville. Denver, Col., is to have a big pigeon tournament some time during the mining exposition there in August and Septem-Then there will be the Kentucky, Nebraska and Kansas tournaments, with New Jersey yet to be heard from. Taking these shoots all together, there will be many hundreds of men who will get "a crack at the birds." A glass ball shooting tournament, open to all, will be held at Lakeside Park, Syracuse, N. Y., June 6, 7 and 8. The Massachusetts Glass Ball Association tournament will be held in the vicinity of Boston in June

THE NEBRASKA ASSOCIATION.—The address of Hon. B. E. B. Kennedy before the meeting of the Nebraska State Sportsmen's Association, at Omaha last week, is well worth a careful reading. There is much sound logic in the paper, and it reflects credit upon the society. The Nebraska sportsmen are doing good work, and are making the influence of their association felt throughout the State. Mr. Kennedy's address shows that the officers of the association have an intelligent appreciation of what the society is for. There is important work to be done by each State sportsmen's association in America, work which properly belongs to it, because the association can accomplish it and there is no one else to do it. Each association deserves credit, and will receive it from the great body of sportsmen, in proportion as it does not shirk its duties nor fritter away its opportunities,

AN IMPORTANT MAINE DECISION.

TN our issue of June 23, 1881, were contained the particulars of a law suit, brought in Piscataquis' county, Me. Briefly repeated the history of the case is this: Mr. Wm. E. Barrows, a citizen of Connecticut, having acquired by purchase all of the land around and enclosing a body of water known as Grindstone Pond, near Monson, Me., posted notices forbidding any person fishing in the pond. Several parties persisted in so doing, and among them was a young man named John M. McDermott, who fished there after the forbiddal of Barrows during the summer of 1880. Barrows brought action of trespass. The pond contains more than ten acres, and it is a natural pond. The land was a part of the public domain of the commonwealth of Massachusetts prior to A. D., 1647, and all of the land around this pond is common, with no fences or enclosure of any kind. The Supreme Court of Massachusetts has decided in several instances that a natural pond of more than ten acres is free to the public for fishing and fowling, by virtue of the Colony ordinance of 1641 and the amendment to said ordinance of 1647. The Supreme Court of Maine has held that the ordinance of 1641 is the common law of Maine, and the counsel for McDermott claimed that if this is so it follows that the amendment is also the common law of that State. By the amendment of 1647, large and important rights were conferred upon the people, for by it was granted the right of passage over all lands lying in common adjacent to natural ponds of more than ten acres, providing they did not pass over any man's cornfield or meadow. These were the questions involved in the case:

1. Are natural ponds of more than ten acres free to the public for fishing and fowling?

2. If so, are the public allowed free passage on foot over adjoining lands where no annual crops are growing?

As this was the first time that these identical questions had arisen in the courts of Maine, the decision of the Court was looked for with some eagerness, for if Grindstone Pond could be closed up and monopolized then there are thousands of others in northern and eastern Maine which may be shut up

The decision of the Supreme Court has just been rendered of which the rescript is as follows:

The colonial ordinance of 1641, more particularly defined in 1647, and The colonial ordinance of 1611, more particularly defined in 1647, and declaring among other things a common right of free fishing and fowling on great ponds of more than ten acres in extent, lying in common, has been so long and so uniformly accepted and acted upon in this State that it constitutes in all its parts a portion of the common law of the whole State, without regard to the question whether it was ever extended by legislative authority to localities not embraced with-in the precincts of the Colony of Massachusetts Bay. It is nother and now a question for the Court whether it shall be adopted with such modifications as might seem desirable under the

change of circumstances that has occurred since its original passag It was long since adopted, and so declared in judicial decisions, and the Court can now only construe, administer and apply it until the Legislature sees fit to change it.

No change affecting the rights of the parties in this suit has hitherto

No change affecting the rights of the parties in this suit has hitherto been made in this State. The plaintiff's posted prohibitions are without avail so long as he did nothing else to give him an exclusive right under R. S., Chap. 40, s. s. 51-53, inclusive. The defendant had the right to got to the pond on foot through uninclosed woodland belonging to the plaintiff and to take fish there; but he must exercise his ing to the planting and to take isn't here; but he must exercise his privilege as conferred by the ordinance and see that he trespasses on no man's corn or meadow tillage or grass land. The case finds that a two-acre piece of land on the border of the pond had been cleared and cultivated. In the absence of proof that it had reverted to a state of nature, this affords a just inference that it should be classed with the lands denominated meadow in the ordinance, and the naked fact that no grass was actually cut upon it in 1880 does not rebut the inference. The defendant passed over and through this piece, and thereby committed a trespa

Judgment for plaintiff for \$1 damage.

Lebroke & Parsons, attorneys for plaintiff; J. F. Sprague and H. Hudson, attorneys for defendants.

Every important point made by the counsel for defendants in their briefs, as stated in our issue of June 23, was fully sustained by the court. The decision is one of the most important ever rendered in Maine in favor of sportsmen, for now it is forever settled that in absence of any prohibitory statute all ponds in that State of more than ten acres are free to all, and the fact that persons have a legal right to cross and re-cross all uncultivated lands around these ponds is also well established. It is needless to add that as public senti-ment is to-day in Maine it would be impossible for land owners to secure the passage of any law adverse to this decision and giving them power to monopolize lakes and ponds.

It should be added that great credit is due counsel for defendant, since without hope of any pecuniary reward from their client they fought this case through for the sake of maintaining the rights of the public in the matter involved.

FISH LAWS.—Those of our readers who are interested in the legislation on fish nets and kindred subjects, are referred to the letter of Mr. D. Y. Howell, Superintendent of Fisheries of Ohio, in our Fishcultural department. What Mr. Howell suggests is evidently most desirable if it can be ac complished. At the last meeting of the American Fishcultural Association it was decided to hold the next meeting in Boston in the first week in September. Professor Baird was to be asked to try to arrange for a general meeting of all fish commissioners about the same time. Whether the Professor will do this, or if done whether the commissioners would be unanimous in their views on this subject or not, we do not know. Again, if they were, it is another thing to procure legislation without amendments being made by interested parties in each State, which would leave the matter about as it stands. We are in accord with Mr. Howell's views, and only mention these difficulties as they seem to us to be the usual obstacles to such attempts to set the fisheries right.

 ${\bf Good\ Work}$ in the interests of legitimate field sports is done in their respective States by the Sacramento, Cal., Bee; the St. Paul, Minn., Pioncer-Press; the Germantown, Pa., Telegraph, and the Augusta, Me., Home Farm. Mr. Willis D. Maier, one of the Blue Gill Club of Fort Wayne, Ind., is in the field with his Fin and Feather. Our valued correspondent, Col. Bob H. Crockett, has become an editor, the Arkansas Gleuner, of De Witt, Ark., having been recently started by him. He is, by the way, he tells us, the third of the grandsons of the celebrated Davy Crockett who are editing country newspapers. A monthly devoted to the interests of fashionable summer sports has lately been started at Albany under the curious name of Outing. The latest to appear is The Sporting Genthoman, published in this city, as a sort of aftermath of the Gentleman's Magazine defunct. Mr. Edmund Redmond has a column devoted to sport in his Rochester, N. Y., Journal,

DESTRUCTION OF FOOD FISH.-Tons of good fishes are monthly destroyed by the meuhaden fishermen, who make them up into oil. The bluefish is the only one they spare, because it tears their nets with their sharp teeth. Captain Gibbs of the schooner Falcon, who last week landed 700,000 menhadon at the factories at Promised Land, in Gardiner's Bay, east end of Long Island, took at one haul of his net 50,000 mackerel and a lot of fine river shad. Not being near a market where they could be utilized for food he turned them into the factory for their oil. This is a most outrageous destruction of the fishes which our fishculturists are trying to increase for food, and it loudly calls for a rem-The wholesale capture of menhaden is bad enough, but when it comes to such waste as is recorded above it should be made a criminal offence.

NEW JERSEY FISHCULTURE.—The Legislature of New Jersey has practiced economy in its fishcultural appropriations to the verge of meanness. Five thousand dollars is the most that it has ever given in a year for this purpose, and this year it gives nothing. Its commissioners are public spirited, large-hearted men, and give their time gratuitously. New Jersey has many valuable fisheries, from which many persons derive a livelihood for the whole or portions of the year, and the good effects of the work of the commission is acknowledged by the fishermen. The Legislature needs missionaries to teach them that a plenty of fish means cheaper food. The Newark Advertiser has given them a few hints on this subject, which we hope will be heeded.

ANOTHER YEAR BOOK, -Following the good example of the Michigan Sportsmen's Association, which has for several years past published in pamphlet form for gratuitous distribution the papers read at its annual meetings, the California State Sportsmen's Association will this year print a collection of the papers read at its last meeting. The New Hampshire Fish and Game League addresses are published in the regular annual reports of the Fish and Game Commissioners of that State. All these publications have their effect in moulding public sentiment. We hope that other associations may adopt a similar course.

Mr. Bergh Does Not Ride.—The recent publication of a letter written by Mr. Henry Bergh to the Park Commissioners, in which he violently denounces as cruel the caging of wild beasts in the Central Park menagerie, has been seized by a certain portion of the press as a suitable occasion for ridiculing the president of the polynomial society as a hobby rider. Our esteemed contemporaries are much mistaken. Mr. Bergh's humane instincts will not permit him to ride his hobby. On the contrary, he bears it tenderly in his arms.

DECORATION DAY is the anniversary that most emphatically marks the flight of time. Twenty-one years have passed since that momentous April of 1861. Babes then are voting men to-day. The flowers of seventeen springs have bloomed and faded since that other memorable April of 1865. And yet it seems but as yesterday that the turf was laid upon those graves now decorated with memorial garlands.

A Good Suggestion.—The Nebraska State Sportsmen's Association propose a memorial to Congress regarding the much needed protection of the big game of the Territories; and they suggest that other State societies do the same thing. The plan is an excellent one, and we hope that it may meet with a fitting response.

FOREST AND STREAM FABLES. IV .-- THE SHRIKE AND THE HAWK.

A SHRIKE in a coppice was making himself very busy and A very disagreeable in catching every little bird and big bug that he could see, and then spitting them upon thorns till he had a hawthorn heavier laden with them than with its own haws. While he sat upon a branch, waiting for another victim to come within reach, a sudden shadow startled him, and looking upward, he saw a Hawk swoop down upon a Pigeon sitting in a tree hard by. Then the Shrike was exceeding wroth, and began to berate the Hawk, who was quickly plucking his quarry for a late breakfast.

"Thou art a vile fellow," shricked the Shrike-"a pot-hunter and trespasser! What business hast thou to kill a bird in this coppies, and just for the filling of thy hungry maw? And it is not to-day only, but yesterday, and the day before, that thou hast at least once in the day done the same outrageous thing!"

"Well," said the Hawk, "it seems to me that, for a fellow of thy habits, thou art making a great ado about the killing of one bird in a day. Prithee, whose work is that I see displayed upon the hawthorn? Didst not thou kill the Sparrows, Titmice and Bugs which are gibbeted there?"

"Thou art a hook-nosed blockhead as well as a vile poacher if thou canst not see the difference between us!" yelled the Shrike. "I am working for science, as any one but a fool might see, if he would but note how I have arranged my speci-

"Ah, indeed! Then science is thy object in making such slaughter. It may be very praiseworthy in that case; but I think it would be better for the little Birds and none the worse for me if thy scientific pursuits were brought to a speedy end," said the Hawk, and added, after musing a little, "thou art a tough morsel, I fancy, but better dead than alive."

The next day there was no sign of the Shrike in the coppied save a handful of ashen feathers and a few larger black ones and the little Birds were none the worse off for having only the Hawk for their neighbor. Moral-?

The Sportsman Tourist.

THE "PIS-KAN" OF THE BLACKFEET.

THE "PIS-KAN" OF THE BLACKFEET.

THE Blackfeet Indians, and perhaps many others, have a peculiar habit of going up on high hills and bluffs conveniently close to camp and sitting there motionless and rigid as statues for hours. Near the close of the day seems to be the particular time for indulging in this practice. Why they do so is a mystery. I have often asked them the reason, and have invariably received the reply, "Kis-tohts," meaning "for nothing." Sometimes I have hidden myself in the coarse rye grass which grows so tall and luxuriantly in the river bottoms, and with the aid of a powerful field glass have closely scrutinized their countenances, but to no purpose. The expression of their faces nover changed. Their eyes had a far-off dreamy look which could not be interpreted. Perhaps, as they looked over the broad, almost limitless prairies, nowadays so seldom dotted with the dark forms of the buffalo and the graceful bands of antelope, pleasant memories of boyhood days come crowding up in their minds. More likely, however, as they gaze over the great rolling prairie, at the blue mountains looming up so grandly in the distance, and at the broad timbered valley of the river so long the homes of their ancestors, their hearts are sad to think how everything is changing; how in a short time the buffalo shall have passed away; and how where the rich bunch grass is used to grow the white man will plant strange weeds and roots. No wonder that their hearts are sad and that their prayers against the whites are bitter.

Unperceived I once heard an old man thus address his medicine or "secret helper." He said:

Fyn. Kist-tuk-ki, Ki-nuk-o-qui-tup-pi. Kim-at-o-Rit, Kim-at-o-kit! An-is-tis nat-os o-nis-ti pray for me. Tell him the sun, wonderful nat-os no-tap-i pah-kok-sin-e-kak-pah napi-quot.

Sun, regularly [Curse.*] white men.

The earnestness of the old man as he delivered this prayer, and the intensity of the curse, the most forcible in the Black-foot language, firmly impressed it upon my memory. Let mo here add,

animals.

But when I began this article I intended to tell you how
the Blackfeet caught buffalo in ancient days; and I now turn

But when I began this article I intended to tell you how the Blackfeet caught buffalo in ancient days; and I now turn to that subject.

Aot so very long ago I happened to be camped with a gens of the Pe-gun-ny, at a place called Willows Round, situated some fifteen miles above here, on the Marias River. Early in the evening I saw old Po-kah-yah-yi, in whose lodge I was stopping, ascend a steep bluff not far off, and, giving him time to reach the top, I followed, and was soon seated by his side. Directly opposite us across the river were the remains of a pis-kan, or, as the white men out here call it, a "buffalo pond." Why so called I cannot say, the literal translation of the word "pis-kan" being "falling-off place." "Now, my friend," said I, after I had regained my breath, "tell me all about that pis-kan. How did you make it; how many buffalo did you catch in one day; and how many winters ago did you use it?"

The old man's story was as follows:
"In those days we had no guns, but used to kill many buffalo with bows and arrows; and sometimes we used the pis-kan. When we made a pis-kan, we first found a little open glade by the river where the prairie came down and ended in a cut bank as high as a man. From this cut bank we built a strong fence clear around the edge of the glade. We used big trees to make the fence—logs and sticks, and anything that would help to keep the buffalo from breaking out. Then we built two lines of stone piles far out on the prairie, two lines that ever diverged from each other. Then the pis-kan was built.

"The night before we intended to make a drive we always

*Cannot be translated.

had a buffalo dance. All the people danced. The medicine men all wore buffalo robes, and sung the buffalo songs. Every one prayed to their secret helpers for good luck. Early the next morning the people went out, and hid behind the stone piles on the prairie. The medicine man who was going to call the buffalo put on a buffalo robe, hair side out, and sitting down smoked one pipe to the Sun. Then he spoke to his wives and all the women of his lodge, saying, 'You must not go outside until I return. You must not look out of the doorway or any hole. Take this sweet grass,' giving it to his head wife, 'and every little while burn a small part of it so that the Sun will be glad. Pray that we will have good luck.' Then he mounted a dark colored horse and rode out on the prairie. When he came near a band of buffalo he began to ride quickly in circles and cired out to the buffalo, saying, 'E-ne-uh!' [meaning 'Buffalo'] The buffalo were first a little scared; then they began to follow him slowly; and soon ran after him as fast as they could. Then the medicine man rode into the shoot, and after the buffalo had also run in he jumped out to one side of the stone piles, and the herd passed by. The people behind kept rising up and shouting, which made them run all the faster. The furfalo in the head of the band were afraid of the stone piles, and kept right on in the middle of the shoot; those in the rear were scared by the people continually rising behind them, and so pushed the leaders ahead. When the band had got close to the edge of the pis-kan, all the people closed in on them and with a great shout drove them over the cut bank into the enclosure. Then with their bows and arrows, the men killed all the buffalo; even the old bulls were killed: The fattest cows were then marked for the chiefs and medicine men by placing sticks on the tails, and the rest were divided up among the people."

The fattest cows were then marked for the chiefs and medicine men by placing sticks on the tails, and the rest were divided up among the people."

The above marrative is true in every respect. As late as 1895 the Pe-gun-ny used these pis-kans on the Upper Marias, Mr. Jos. Kipp, the well-known Indian trader, tells me that in 1864 he saw the Pe-gun-ny capture over seventy-five head of buffalo in this manner. Sometimes three or four drives were made in one day. About seventy-five buffalo were the average drive, though sometimes more than a hundred were taken.

AP-PE-CUN-NY.

A PREFACE AND A TRUE STORY.

A PREFACE AND A TRUE STORY.

I all much obliged to you for having called attention to a typographical error in a former communication of mine, by which, instead of "idem sonans," I was made to use a phrase which has no place in any language with which I am acquainted. It is true that my lingual knowledge is far more limited than I wish it were; still it is not pleasant to see what little learning one has utterly destroyed by the substitution of a word which makes very little sense in what would otherwise be classed at least as not foolish. It is due to the printer to say, however, that, considering the hieroglyphics with which he has to deal, he makes a remarkable approach to accuracy when he sets up one of my communications, for my chirography is said by my friends to be exceedingly illegible.

ceedingly illegible.

But in the published account of some things which I saw, and of which pars magna fui, in the State of Florida, the type makes me use the words "chain in my memory." These words are in inverted commas, showing that I meant to acknowledge the authorship of another for the language indicated. Now, that language is probably not inant to express the idea intended to be conveyed; but the writer from whom I attempted to quote—not literally—saw proper to adopt a very different word from "chain," and that word I intended to write. A reference to "Hamlet," Act 1, Scene 3, will show that Polonius said to Laertes, as the latter was about to sail for France:

"And these few precents in thy memory Look thou character,

"And these few precepts in thy memory Look thou character."

This explains what I meant to write, and I can hardly think it possible I could have used the word "chain." Perhaps the printer was not accustomed to see the word "character" used as a verb, or he may have mistaken the scrawl. Be that as it may, the blunder was committed.

The quotation from Shakespeare reminds me of a scene which I witnessed a few years ago in the city of Washington, during a session of Congress. I happened to be there on a visit of business, which detained me for a considerable length of time; and when not engaged in its transaction I was in the habit of calling on our members, all of whom were known to me, and enjoying the pleasures which their conversation afforded. On the occasion to which I refer I had called to see Mr. — and Mr. —, who had rooms at a pleasant house on C street, and occupied the same parlor for the purpose of receiving their friends and attending to the duties which their constituents had committed to their charge. We had talked of various matters connected with constitutions, laws, mechanics, agriculture, the fine arts, etc., and were just entering upon the subject of guns and fishing-tackle, when a servant entered and handed Mr. — a beautiful visiting card, upon which was printed—

JOHN WHITE SMITH,

Of the Royal Academy.

He handed it over to his colleague, Mr. D., remarking:
"This is what a man gets by being distinguished. You have
no such honor as I have;"
"What do you mean?" said D.
"Why this: Recognizing my peculiar fitness for the place
—and no Speaker over makes an appointment for any other
reason than to serve the interests of the country—when a
vegage you courred in the Committee on Bailways and Capals reason than to serve the interests of the country—when a vacancy occurred in the Committee on Railways and Canals by the death of Mr. Schleicher, of Texas, I was selected for the important position. The propriety of the selection was so apparent to every one, that it was forthwith sent by cable to the Royal Academy of Great Britain, and this Society has sent a special messenger, in the person of John White Smith, F. R. S., P. Q. G., to interview me upon matters relating to the topography, climate, rainfalls, watersheds and other matters of importance to the world, which our committee is obliged to consider, and which said Society has been duly informed I fully comprehend."

Of course, the colleague referred to and myself knew this to be jocular; but we did not know what could be the business which induced Mr. John White Smith to send his card to Mr. —— Just then a gentle tap was heard, and Mr. — rose, went to the door, opened it, and with that Chesterfieldian bow for which he is distinguished, invited the distinguished stranger to enter, announcing his name, and

giving the visitor a warm shake of the hand. Then he introduced him to his friend and colleague and myself, and asked him to be seated. Mr. Smith laid down a large bundle upon the table—perhaps the special instructions which he had received from the Royal Academy. Having just had our mail, and not wishing to be impolite to the distinguished stranger, we apologized for looking over our papers and letters, whilst he and Mr. — were engaged upon the subject which caused him to be present. Still we looked at these two with one eye and heard with one ear.

"You represent the Royal Academy, I suppose, sir?"

"Yes, sir."

"I am happy to have had the honor of a visit; and shall be pleased to contribute all I can to further the objects which led you to call at my room. Will you do me the kindness to inform me to what I am indebted for this opportune and

inform me to what I am indebted for this opportune and agreeable visit?"

"With great pleasure, sir. [Unrolling his bundle.] Mr. Ordway tells me that you are exceedingly fond of Shakespeare; and I am the agent for the sale of the Royal Academy edition of the works of the great dramatist, and thought you would be glad of an opportunity to subscribe for a copy. It is by far the finest edition of Shakespeare ever published. It has copious notes by Knight, the very best annotator of his works, who has explained with masterly skill many words and phrases which have hitherto had an unknown or doubtful signification. And then each play has a fine engraving—far superior to any yet published." Here he turned over the leaves of "Hamlet" and showed Ophelia. We had seen that the member of the Committee on Railways and Canals had fallen somewhat from his high expectations; and we wondered (at least I did) how he would manage to come down without too severe a shock to his intellectual and moral system. "And you do not represent the Royal Academy of Arts and Sciences, as your card indicates?" said he.

"Oh, no, sir, only the Royal Academy edition of Shakespeare," replied Mr. John White Smith.

"Well," said Mr. —, "I have not the pleasure to know the gentleman whose kindly judgment led you to make me n visit; but am happy to say that he has not misrepresented men, as you are, show the same taste and judgment. As I remarked, the annotations are by Knight, and the engravings by one of the finest artists of this country or Europe. What a sweet and said face the "fair Ophelia" has, the "nymph," of whom **Hamlet* asked "in thy orisons, be all my sins remembered."

When the words "intelligent and justly distinguished were anyling to Mr. — beloeded alwerd face men here." agreeable visit?

as weet and sad face the 'fair Ophelia' has, the 'nymph,' of whom *Hamlet* asked 'in thy orisons, be all my sins remembered.'"

When the words "intelligent and justly distinguished" were applied to Mr. —, he looked pleased, for we all have a weak side for flattery, and even Congressmen, who practise the art, are not proof against its seductive influences. "Is that a photograph of Ophelia, or is it a fancy sketch? If it is her 'counterfeit' [see the last of the casket scene in the "Merchant of Venice"] I'll buy a copy, for I always loved her, and never could but admire *Hamlet's good taste when he bestowed upon her the affections of his soul." "Why, no, it is a fancy picture." "Not real! Is it possible that your edition has fallen into the ridiculous habit, which is a disgrace to its fellows, of printing false representations, which produce upon the mind impressions which are based upon urreality? But you say the annotations are by Knight. Who is he? for I am ashamed to confess I never heard of him." "As I remarked, he is a fine Shakesperian scholar, who has thrown a great deal of light upon many passages which have heretofore been quite obscure." "Why, as to that, my friend, I much prefer to know what Shakespeare said than what Knight, or Malone or Johnson says. I have the Boston edition, which is good enough for me. The trouble I experience is, that I can't understand shakespeare, and am not sure that the explanations I see are true or false." "In order to understand him you must know the history of the time of which he wrote, and this is largely supplied

Shakespeare, and am not sure that the explanations I see are true or false."

"In order to understand him you must know the history of the time of which he wrote, and this is largely supplied by the excellent annotations of Knight."

"But I don't know these things, and, therefore, often fail to understand. However, I am glad you have called to see me, for it gives me an opportunity which I have long desired—an opportunity of conversing with an intelligent gentleman, thoroughly conversant with the writings of the Master of the Drama, who can and will, no doubt, take great pleasure in unfolding to me the mysterious reading of, several passages of my favorite author."

This seemed to infuse joy into the heart of Mr. Smith, and with a smile indicative of his intense delight, he politely said, "I'll be happy indeed to explain any passage upon which you may seek enlightenment."

"Well, sir, I think the piece which first occurs to me is found in Maebeth, and the architratior is revolving over in his mind the reasons for and against the damning deed which. Lady Maebeth, with 'sly, ensmaring art,' had 'screwed his courage to the sticking place' to commit. These, sir, are the words:

"Besides, this Duncan."

'Besides, this Duncan Hath borne his faculities so meek, hath been So clear in his great office, that his virtues Will plead like angels, trumpet-tongu'd, against The deep damnation of his taking off.'"

At this point Smith, who probably understood the meaning of the words quoted, hastened to interject an explanation, happy enough that the quotation was one which he could so readily answer. But Mr. — begged him to desist for a while, saying that he comprehended the meaning of the author thus far, his desire being to get some insight into that part of the passage immediately following:

" 'And pity, like a naked new-born babe, Striding the blast, or heaven's cherubim, hors'd Upon the sightless couriers of the air, Shall blow the horrid deed in every eye, That tears shall drown the wind.

"Now, what does that mean?"

Mr. Smith was in deep water, and floundered lustily for a few moments, when he was interfupted by Mr. —, who said: "Shakspeare was a tender-hearted man, and no one can make me believe that one of his genius would have ever been so hard pushed for an illustration as to have taken a bran new baby—the most helpless of all animate things—slung it up bare-backed upon the top of an old blind horse—for a "sightless courier" must be one that cannot see, is blind—put a tin trumpet in its hand—when everybody knows it could not lodd one—and set it to blowing murder into every one's eye with such a sharp blast as to draw out the water in such "Now, what does that mean?"

abundance that the wind itself—the fountain of breath—should be drowned. I don't believe it, sir. It is possible, however, you may be right. And now be so kind as to clucidate another passage from Shakespeare. I cannot recall the play where it is found, but so soon as I quote it I am sure your intimate acquaintance with the writer will enable you to tell. It may not be found in any of his dramas, but among his miscellanea."

Smith's variety was again touched, and, he smilled intelligence.

Smith's vanity was again touched, and he smiled intelli-

gently and graciously, asking for the passage.

"It is this, you will see that it is the form of an interrogatory: "Whether at public elections the votes of faction predominate more by internal suggestions or the bias of juristratory."

Smith started off in an explanation, when Mr. D., who who had been seemingly absorbed in a morning paper, could maintain his gravity no longer and broke out in a fit of laughter, in which I was obliged to join, and which suddenly dried up the fountains of Shakesperian knowledge. Mr. — preserved his sober expression, and rising from his seat with apparent offense, rebuked Mr. D. by telling him that he was "astonished that a gentleman supposed to be capable of representing in Congress one of the districts of North Carolina was so far forgetful of the proprieties of life as to disturb, by unseemly laughter, an intellectual and literary conversation carried on between his colleague and a representative of the Royal Academy edition of Shake-Smith started off in an explanation, when Mr. D., who sentative of the Royal Academy edition of

Smith looked as if he thought something was wrong, but what it was he was unable to understand. So quietly wrapping up the pictures of Ophelia, Desdemona and Cordelia, with Knight's annotations, he remarked: "Well, I guess I can't sell you a copy this morning."

"No, sir; my colleague's impolite conduct has so annoyed me that now I would not salute the 'pretty little Jessica' with a biss."

And that was the last attempt of Smith on this member.

SPRING GREETINGS.

A FEW days ago the warm rays of the sun severed the icy chains which for months had bound our beautiful Hebron Pond in frigid bondage. The floodgates of nature were opened wide and its waters arose to their highest pitch. The dreary clouds have cleared away and bright sun smiles upon us. All nature is rejoicing in happy unison. The frogs, quails, robins, loons and whip-poor-wills are again among us. Everything is symbolic of the new spring life. The bursting leaves upon the trees of the forests skirting the crystal lake, the sweet fragrance of the wild flowers, and the songs and trills of the new birds are all witnesses that sumer is rapidly approaching. From our yillage we emburk song and this of the new bins are an witnesses that summer is rapidly approaching. From our village we embark in our modest craft upon the water and engage in the pleasant recreation of angling for trout. Out upon the silent impressive lake, while the shades of night are falling, one is in a land of shadows. The clouds flitting across the horizon, the varied trees upon the shores, the mountain tops in the distance are all reflected in the clear water beneath, and we, distance are all reflected in the clear water beneath, and we, in imagination, are in a different world. As we move we behold weird and strange scenes, platoons of men, and throngs of shadowy beings are moving in wild and fantastic uniformity, and for a moment we lose our terrestrial identity and revel in the novelty of a land and world of shade. The and revel in the novelty of a land and world of shade. The spring is a time for rejoicing and good cheer. And this spring we have much to rejoice for. In this part of Maine public sentiment regarding our game and fish laws is rapidly changing for the better. Many of those who once espoused the cause of the poacher admit with commendable frankness that they were in the wrong and are now our staunchest friends. One of the gubernatorial candidates of one of our leading political parties, and the one who will undoubtedly carry off the prize in the convention, is a well known and ardent sportsman, one whose name has long been familiar to the fraternity: The world moves and it is not at all improbable that the Pinc Tree State may yet have for her chief magistrate a true and genuine sportsman, a devoted follower of Izaak Walton.

J. F. S.

Monson, Me., May 26

Capt. Hiram Mansell.—Hartford, Conn., May 23.—Many of your readers who have visited the Moosehead Lake region will be pained to learn of the death of Capt. Hiram Mansell of the steamer Rebecca. He was instantly killed by a steam sawing-machine on the 4th inst. He leaves a wife and five small children. Capt. Mansell had been for many years one of the most popular guides in the Moosehead Lake regions, and had, until his promotion to the steamer Rebecca last season, piloted many of the exploring parties through the wilds of Maine. It was the writer's privilege in the autumn of 1880 to enjoy his society during a seven weeks' tour from Moosehead Lake to the Aroostook River. His ever polite manners and agreeable voice made his services always at a premium, while his knowledge of woodcraft was indispensable to the tourist.—T. Sedowick Steele.

Camp Hire Hlickerings.

MART loved to hunt; but ducks seemed to bear a charmed life before him, he never got any. One day one of the patrolmen on the marsh picked up three wounded ducks, "killed with a paddle." These he gave to Mart, telling him one was a buffalo-head, another a pintail and the third a bluebill. That evening, when we were all sitting around, some one asked Mart how many ducks he got. He replied with some pride, "Three." "What are they?" "Oh, I've got a button-lead, a pinback and a bluetail." Did we smile?—C.

Eleven P. M. We are about to turn in, when a flock of geese fly honking over the shanty, and Brunt, bouncing into his trousers, grabs his gun and rushes out for a shot. "That reminds me," says Billy, "of the two Irishmen rooming together in a tenement house. An alarm of fire is heard. They both pile out of bed and into their clothes, one of them in his haste getting his trousers on hind side before. After the fire his companion meets him in the street with a most curious expression on his face, having just discovered his predicament. "Are you hurted, Pat?" he asks. "No," says Pat, looking down, "O'm not hurted, but o'm badly strained."—Dick.

"Forest and Stream Bird Notes."—A book for sportsmen and naturalists. Price \$1.50.

Hatural Distory.

MOCKERS.

MOCKERS.

MISS Juliet Thorpe, of this place, has a wonderful mocking bird. Under the ladies' training it has learned to whistle a portion of three tunes. It initiates perfectly the crowing of a rooster, the mewing of a cat, and is well advanced on the bark of a dog. We hope Miss T. will not be annoyed by its falling into the habits of the average dog and barking at night. This bird appears to imitate for the pure fun of the thing. One of your correspondents said some time that mocking birds exercise considerable intelligence in their imitation of sounds. I am almost inclined to agree with him. Another mocker, a native of Australia, inhabiting the mountains, is called the lyre bird; the tail feathers when erect resemble in shape that ancient musical instrument the lyre. This beautiful bird in appearance resembles the pheasant family, and is a perfect mocking bird. It will not only imitate other birds in clear and unnistakable notes, but the human voice as well. Its natural note, with which it invariably makes a beginning, is a sharp, far-sounding cry of bullan, bullan. It is not known if this beautiful bird will live in confinement. I am not informed by books I have read if the experiment has been tried. What a magnificent pet he would make with his strange plumage and magnificent pet he would make with his strange plumage and magnificent this, gives a short sketch of this Australian mocker.

The nesting of the birds here is near completion—many of the young already hatched; but I fear this cool weather will kill them off. Quail are pairing off and getting to house-keeping. What a "merrie" whistle this merrie bird has; its cheerfulness is contagious. Bob White will do his duty and raise his family according to the highest quail ethics, and

keeping. What a "merrie" whistle this merrie bird has; its cheerfulness is contagious. Bob White will do his duty and raise his family according to the highest quail ethics, and thereby bring joy and gladness to the hearts of the aportsman, the pot-hunter, professional trapper and nigger at one and the same time, providing the sun and rain are propitious.

DICK SWIVELLER.

Graniteville, S. C.

So little is known of the habits of the lyre bird (Menura superba) that a few words concerning them may be of interest to our readers. The following remarks are from the pen of Mr. Gould, the great English ornithotogist. He says: "The great stronghold of the lyre bird is the colony of New South Wales, and from what I could learn, its range does not extend so far to the custward as Moreton Bay, neither have I been able to trace it to the westward of Port Philip on the southern coast; but further recearch can only determine these points. It inhabits equally the bushes on the coast and those that clothe the sides of the mountains in the interior. On the coast it is especially abundant at the Western Port and at Illawarra; in the interior the cedar brushes of the Liverpool range, and, according to Mr. G. Bennett, the mountains of the Sumat country, are among the places of which it is the denizen.

"Of all the birds I have ever met with the Menura is far the most shy and difficult to procure. While among the mountains I have been surrounded by these birds, pouring forth their loud liquid calls for days together, without being able to get a sight of them, and it was only by the most determined perseverance and extreme caution that I was enabled to effect this desirable object, which was rendered more difficult by their often frequenting the most inaccessible and precipitous sides of gullies and ravines, covered with tangled masses of creepers and umbrageous trees; the cracking of a stick, the rolling down of a small stone, or any other noise, however slight, is sufficient to alarm it; and none but those who have traversed those rugged, hot and suffocating bushes can fully understand the anxious labor attendant on the pursuit of the Menura.

"Independently of climbing over rocks and fallen trunks" So little is known of the habits of the lyre bird (Menura

however slight, is sufficient to alarm it; and none but those who have traversed those rugged, hot and suffocating bushes can fully understand the anxious labor attendant on the pursuit of the Menura.

"Independently of elimbing over rocks and fallen trunks of trees the sportsman has to creep and crawl beneath and among the branches with the utmost caution, taking care to advance only while the bird's attention is occupied in singing or in scratching up the leaves in search of food; to watch its action it is necessary to remain perfectly motionless, not venturing to move even in the slightest degree, or it vanishes from sight as if by magic. Although I have said so much on the cautiousness of the Menura, it is not always so alert; in some of the more accessible bushes, through which roads have been cut, it may frequently be seen, and on horse-back even closely approached, the bird evincing less fear of those animals than of man.

"At Illawarra it is sometimes successfully pursued by dogs trained to rush suddenly upon it, when it inmediately leaps upon the branch of a tree, and its attention being attracted by the dog below barking, it is easily approached and shot. Another successful mode of procuring specimens is by wenring the tail of a full plumaged male in the hat, keeping it constantly in motion, and concealing the person among the bushes, when the attention of the bird being arrested by the apparent intrusion of another of its own sex, it will be attracted within the range of the gun. If the bird be hidden from view by surrounding objects, any nunsual sound, such as a shrill whistle, will generally induce him to show himself for an instant, by causing him to leap with a gay and sprightly air upon some neighboring branch to ascertain the cause of the disturbance. Advantage must be taken of this circumstance inmediately, or the next moment it may be half way down the gully.

"The Menura seldom, if ever, attempts to escape by flight, but easily cludes pursuit by its extraordinary powers of running. None are

hand he rarely allows it to escape, and in many instances be will even kill it with his own weapons.

"The lyre bird is of a wandering disposition, and although it probably keeps to the same bush, it is constantly engaged in traversing it from one end to the other, from the mountain base to the top of the gullies, whose steep and rugged sides present no obstacle to its long legs and muscular thighs. It is also capable of performing extraordinary leaps, and I have heard it stated that it will spring ten feet perpendicularly from the ground. Among its many curious habits, the only one at all approaching to those of the Galliancies is that of forming small rounded hillocks, which are constantly visited during the day, and upon which the male is constantly tramping, at the same time creeting and spreading out its tail in the most graceful manner, and uttering its various crics, sometimes pouring forth its natural notes, at others initiating those of other birds, and even the howling of the native dog (Dingo). The early moraing and the evening are the periods when it is most animated and active.

"The food of the Menura appears to consist principally of

"The food of the Menura appears to consist principally of

insects, particularly of centipedes and coleoptera, found the remains of shelled snails in the gizzard, v

round the remains of shelled shalls in the gizzard, which is very strong and muscular."

Another species of lyre bird, known as Menura alberti is distinguished from the foregoing by the shortness of the lyre-shaped tail feathers and the absence of the dark bars or the web. This species, like superba, is a remarkable process.

DISPERSAL OF FRESH-WATER SHELLS.—Probably the last article from the pen of the late Charles Darwin, published during his lifetime, was an article on this subject, which appeared in Nature, April 6. In it he says: "Mr. F. Norgate, of Sparham, near Norwich, in a letter dated March, § 1881, informs me that the larger water-beetles and newts in his aquarium 'frequently have one foot caught by a small fresh-water bivalve (Cyclas cornaz), and this makes them swim about in a very restless state, day and night, for several days, until the foot or toe is completely severed. 'He addes that newts migrate at night from pond to pond, and can cross over obstacles which would be thought to be considerable. Lastly, my son Francis, while fishing in the sea off the shores of North Wales, noticed that mussels were several times brought up by the point of the hook; and though he did not particularly attend to the subject, he and his companion thought that the shells had not been mechanically torn from the bottom, but that they had selzed the point of the hook. A friend also of Mr. Crick's tells him that while fishing in rapid streams he has often thus caught small Unios. From the several cases now given there can, I think, be no doubt that living bivalve shells must often be carried from pond to pond, and by the aid of birds occasionally even to great distances. I have also suggested in the 'Origin of Species' means by which fresh-water univalve shells mist often be carried from pond to pond, and by the aid of birds occasionally even to great distances. I have also suggested in the 'Origin of Species' means by which fresh-water univalve shells mist often be carried from pond to pond, and by the aid of birds occasionally even to great distances. I have also suggested in the 'Origin of Species' means by which fresh-water univalve shells might be far transported. We may therefore demur to the belief doubtfully expressed by Mr. Gwyn Jeffreys in his 'British Conchology,' namely, that the diffusion of fresh-water shells 'had a different

THE EARLIEST SPRING FLOWER.—A correspondent who writes from Norwalk, Ohio, asks us. What is the first spring flower to be found in Connecticut? A friend says it is the trailing arbutus. I think it is the Hepatica americana or liverwort. I have found this plant in bloom, I think, in March. Is there not a little rockwort or sandwort that grows on rocky hills that blooms as early as March? I think such a little plant grows on East Rock or the mountains west of Meriden, Conn.—W. B. H. [We have never found the trailing arbutus (Epigea) blooming as early as Hepatica triloba, and believe the latter to be the earliest spring flower in Connecticut. Of course if a bed of Epigea were situated in an unusually favorable locality it might bloom as early as the liverwort, but we do not think that it usually does so. Sanguinaria or bloodroot is another early flower, usually in full bloom by the middle of April, when you may see its showy white blossoms along the edges of the meadows as you are beating them for snipe. There is an inconspicuous little white flower (not Saxifraga) which is early, but we have forgotten its name.]

Crow Blackbirds Destroy Birds' Nests.—Bay Ridge, L. I., May 25.—Permit me to say one word about crow blackbirds, which I understood fed on grubs, worms and seeds. One instance to the contrary. Last Thursday, 25th inst., I shot one of these birds, which was teasing some robins in a tree near by, and on dissection found its crop contained the eye and entrails of some bird. Suspecting that it had been at the robin's nest I instituted a search, and sure enough found one young, helpless bird torn to pieces, and the remains of eggs scattered about under the tree. Have any of your correspondents noticed the same?—A. L. TOWNEND. [Crow black birds are both graminivorous and carnivorous, and are given to destroying birds' nests, as are many other birds which are not ordinarily suspected of indulging in such practices. Several years ago (Vol. VIII., p. 129) a note was published in Forest And Streak announcing that in Florida this species catches and eats fish. We have often seen them on the shore feeding on molluses of various kinds.] Crow Blackbirds Destroy Birds' Nests.—Bay Ridge

SPRING NOTES.—New York, May 19, 1882.—The following is a list of some birds I noted had arrived at New York city: Robin (T. migratorius); wood thrush (T. mustelinus); brown thrush (L. rufus); chewink, red-headed woodpecker, Baltimore oriole, song sparrow, chipping sparrow, barn swallow, chimney swallow, house wren, crow blackbird, redwinged blackbird, catbird, powee, sharp-shinned hawk, redstart, sparrow hawk, and common crow.—A. T. GESNER.

BAY RIPER J. L. WAY 18, 1882, Appare the higher shigh.

Start, sparrow hawk, and common crow.—A. T. Gesner.

Bay Riddle and the short of th

How Does a Chameleon Change Colon?—How is it that a chameleon changes color? I have always heard that it took the color of the object on which it stood. Now, I have repeatedly seen them, on a whitewashed board for instance, change from a bright green to a chocolate brown, and then, without warning, again become green. I have seen the same thing happen on brown surfaces and on green; so I should think the change must be produced at will by the chameleon. Will you kindly publish an explanation of the change? Trum. It has been thought by some that the change? Trum. It has been thought by some that the change of color is due to the greater or less rapidity of the circulation, which might thus have the same effect as a violent emotion sometimes has on the human skin—sometimes flushing it or again making it pale. Milne-Edwards, howflushing it or again making it pale. Milne-Edwards, how-ever, believed that it arises from the presence of two layers of pigment cells in the skin, so arranged as to be movable one upon the other, thus producing varying effects of hght.]

DEER Horns.—Whitestone, L. I., May 16.—During a short visit to Charleston I went to see a collection of deer horns, valued at some four or five hundred dollars, containing twenty or thirty pairs of all sizes and kinds, and owned by an eminent professor of that city. There were six sets, locked two-and-two, that were inextricably caught. I tried my mightlest but could not part them. The Professor said that they had been found so in the swamps, and in each in-

stance the remains or skeletons were found with them, showing conclusively that the deer had fought, locked horns and being unable to part company, died. With this collection I also found a skull with only one horn attached, there being no marks whatever to show that another antler had grown on the opposite side; and this was claimed to be a doe's head!—Tim Berdoodle.—[We have occasionally seen deer heads, said to be those of does, which bore horns, and at least two have come under our observation on which there was but a single antler].

"Bright Feathers."—Part V. of Mr. Rathbun's work under the above title has just been received. It contains the concluding portion of his remarks on the summer yellowbird, and the plate and some pages of text on the next species which he takes up. This is the redstart (Setophaga raticilla), of which excellent figures are given of both male and female. The cuts are well drawn, and the coloring is true to life. In the text Mr. Rathbun draws largely on Dr. Coues's charming biographical sketch of the species, as well as from Mr. Grutry's remarks. "Bright Feathers" belongs to a class of books which presents attractions to a considerable class of the community, who, without feeling any special interest in the community, who, without feeling any special interest in, or love for birds, yet admire their beautiful colors and like to read about them.

The Wickersheimer Fluid.—New York, May 12.—Your correspondent "R. II. D., Canandaigua, N. Y.," asks for information regarding the receipt for a preserving fluid for natural history specimens. I have used the Wickersheimer fluid quite frequently, and have had very satisfactory results. I injected the fluid into the cavities and tissues of several redwing blackbirds and meadow-larks, eighteen months ago, and the specimens are still perfectly preserved. I have also successfully preserved small fish, two reptiles, as well as anatomical specimens. The arsenic is the most important ingredient, without it the fluid is almost worthless.—J. E. M. L.

A TOUGH OLD HEN.—Warrenton, Va., May 13.—Our county treasurer informs me that he had two hens missing some six weeks ago, and yesterday while moving some lumber has found them immed between the piles, where they bonne six weeksago, and yesterday while moving some lumber, he found them jammed between the piles, where they had gone to lay and were unable to return. One hen was dead, the other had sufficient vitality to eat and is still alive, though her legs and feet are drawn up as with rheumatism.—R. H. D.

"THE MUSIC OF NATURE."—The second cut in this article last week was accidentally inverted in the form.

Game Bag and Gun.

BRANT SHOOTING AT CAPE COD.

Spring, 1882,

BRANT SHOOTING AT CAPE COD.

Spring, 1882.

The earlier part of the past winter having been quite warm, the birds were not driven as far south as in some previous years, and by the end of February the advancing columns were winging their way northward and arriving at Cape Cod. When the winter is so cold as to force the birds in considerable numbers as far south as Pamlico Sound more time is required for them to work their way back, by easy stages; and they do not arrive on our coast before the middle or end of March. By the first of May so few are left here as to afford the sportsman little satisfaction; and although a few remain to regale themselves in the balmy breezes of the middle of the month, yet the season may be said virtually to end with the month of April.

This spring the brant did not seem to be in as much of a hurry to pass on further northward as usual, but dallied till vast numbers had accumulated in the Bay of Chatham, which, under ordinary circumstances, would insure good shooting throughout the season; but there were various enuses operating against such happy results. As a general rule the older and stronger birds come along first, with a slight sprinkling of young, while later in the season the proportion of young birds is much greater. Among the earlier arrivals this spring there were scarcely any of the birds bred last year, which we designate as young, but later in the season there was a goodly mixture of the tender age. They were not, however, in very good condition, whether from scarcity of food, or from having been harassed by gunners on their winter feeding grounds, or from some other cause, we are unable to determine. It has been reported that a great many brant have been shot during the past winter South, so much so that parties at certain points have resorted to canning in order to preserve them for future use.

Among the various interposed causes that reduced the number of birds killed this year below the average, we may mention two or three. About the 20th of March, when the busi game; but at the same time we desire to express the opinion that the use of these long cartridges in this kind of shooting is an error in judgment. Birds are excellent judges of dis-

tance, and generally keep out of harm's way, particularly where danger is apparent. For instance, if an ordinary gun

tance, and generally keep out of harm's way, particularly where danger is apparent. For instance, if an ordinary gun will kill at sixty yards, then the birds will put about a hundred and twenty yards of space between themselves and the suspicious object. Now, if a new projectile is introduced that will kill at one hundred and thirty yards, the birds very soon—astonishingly soon—learn to measure off two hundred and sixty yards; nor will they draw nearer when on the qui vive, as they always seem to be, so that an ordinary gun becomes a sort of useless implement. Neither do the two hundred and sixty yards give the birds immunity from these missiles, for the parties using these cartridges become so inspired with their efficiency that they are tempted to shoot at almost any distance, wherever a bird can be seen. The result is a great amount of scare and a small amount of game. A cartridge that will explode at one hundred and twenty yards is at sixty yards simply an elongated bullet.

We were on the branting ground from the 9th to the 15th of April, and shot alongside the party using the long-range cartridges, and the truth compels us to say that if we ever had a doubt about their utility, our observations on this occasion entirely convinced as that for this kind of shooting they should be rejected, however useful they may be for single birds, deer and large game. If a flock of brant were to pass within forty yards of a gun charged with one of these cartridges, in the hand of a most experienced and skill-dil gunner, very few birds could be killed, as the shell bursts ever so far beyond the flock. There is no time to slip in a common cartridge after the discovery that the flock is approaching within forty yards, and so armed the gunner must "let slip the dogs of war," and to his surprise see the flock, with undiminished numbers and increasing speed, making head for the "dim distance." We do not believe in "telling tales out of school," but as long as we have expressed an opinion of the long range as compared with comm

ing how soon these ordinarily shy birds will spring up from different parts of the bay in little "pods" (flocks) and assemble around the new comers and decoys. They are very social and gregarious among themselves, but cold and reserved toward all other fowl. We have seen them pile up on and around the bar by hundreds, so that when a shot was made it was mere slaughter, as many as forty-four being killed by a single discharge of two double-barreled guns, and as many as a thousand or fifteen hundred would be killed in a single season. All that is changed now. What few birds are killed have to be shot on the wing, singly or from very small flocks, and now, when the birds seen to be fully as numerous as they were then, with all the modern improvements in guns and implements, with four or five times as many gunners on the ground, a season's work foots up only five or six hundred brant for all the clubs together.

This shooting at birds on the wing, especially when near their feeding ground, is a pernicious plan. It makes them shy, and, in fact, is very likely, if persisted in, to ultimately drive them from their haunts altogether, and could we have our way about it, we would never use a wool decoy or shoot at a flock of brant on the wing. Were a single bird or a pair to come along with a moral certainty of none being left alive to tell the tale, the case would be somewhat modified.

The number of brant killed this season by the Monomoy Branting Club was two hundred and twenty-seven, the average number for the past eighteen years being three hundred and two. But the number of birds killed is not all the reward one gets for a week spent at the seaside in brant shooting. If no birds are killed to-day, one is buoyed up by the hope or expectation of better luck to-morrow, and is made happy by the thought of some splendid shots which he is destined never to realize. Still he gets the benefit of pure air, change of diet, pleasant companionship, a view of the ever changing sea, moderate expense and exemption from the ordina

Bosros, May 18, 1882.

MRS. SEALE CAPTURES A DEER.—Philadelphia, Miss.—I send inclosed a clipping from the Neshoba Democratof April 13, which gives an account of one way to capture a deer. Mrs. Seale lives near here, and this is a true story. "Some days ago, the wife of our recently married friend, Billie Seale, noticed a yearling deer come up the lot with the cattle one evening, and she concluded to have him. She went around the cattle and drove them in the lot and proceeded to put up the bars. The deer went near the stable door, and seeing Mrs. Seale, became frightened and jumped immediately into the stable, when Mrs. Seale lost no time in getting there and closing the door, thus capturing the deer. Her family and friends are disposed to laugh at her about her well-executed plans in making the capture, but we are bound well-executed plans in making the capture, but we are bound to say hurrnh for Mrs. Mollie, and have a strong mind to send her the Democrat one year for doing what no other woman can do—(nor man cither)." I suppose that the deer that Mrs. Scale captured had gone among the cattle to get rid of flies and gnats.—Forest Field.

Guns and Baseball Bats.—A game of baseball played on Saturday, May 27, between the Electrics, of Messrs. Hartley & Graham, and the Standards, of Messrs. Schover-ling, Daly & Gales, resulted in a victory for the latter by a score of 16 to 15.

FIELD SPORTS IN NEBRASKA.

THE eighth annual convention of the Nebraska State Sportsmen's Association met at Omaha May 23d, in the rooms of the Omaha Sportsmen's Club, the President of the Association, Hon. B. E. B. Kennedy, presiding. The following clubs were represented by delegates:

Omaha Sportsmen's, Omaha Workingmen's, Lincoln, Charles Silver Grant Club.

Omaha Sportsmen's, Omaha Workingmen's, Lincoln, Oscoola, Silsby Gun Club of Syracuse, Nemaha County Club, Lancaster County.

The Lincoln Sportsmen's Club appointed the following delegates: B. H. Polk, T. P. Quick, C. E. Strausburger, S. F. Rouse, A. G. Kendall.

Geregaces: B. H. Polk, F. P. Quick, C. E. Strausburger, S. F. Rouse, A. G. Kendall.

Osceola Sportsmen's Club delegates: L. A. Beltzer, J. M. Woods, A. Seager, A. W. Smith, H. M. Sykes.

Lancaster County Club delegates: A. H. Mendenhall, James Kelley, James Peart, Robert Collins.

Silsby Gun Club, of Syracuse, delegates: G. Z. Page, D. D. Bray, W. N. Cook, W. T. Peet, F. E. Brown.

Omaha Workingmen's Club delegates: Wm. Robinson, John Hoye, Wm. Carnaby, John McDonald, George Jones.

Omaha Sportsmen's Club delegates: Wm. Krug, George B. Lake, J. H. Peabody, A. S. Patrick, R. N. Withnell.

Nemaha County Sportsmen's Club delegates: R. W. Furnas, W. T. Den, W. W. Browning, J. C. Eberly.

President Kennedy read his annual address, which was as follows:

President Kennedy read his annual address, which was as follows:

Gentlemen of the State Sportsmen's Association of Nebraska:
Custom has made it incumbent upon me to submit to your consideration a review of the past year's experences, with such suggestions for the future as may be appropriate to the interests of game protection and true sportsmanship.

Notwithstanding the misguided criticisms of certain over zealous but well meaning persons in their denunciations of sportsmen and sportsmen's association, the grand work of game and fish protection has been materially advanced in the State during the year just closed. These people do not investigate the causes of scarcity of game. They are told that prairie chickens and quails are scarce and becoming so nore and more every year. Thereupon they denounce all sportsmen, sportsmen's associations, and the "murderous schotgun" as the cause. They fail to co sider that the inclemencies of winter, the late burning of the prairies, and the farmer's trap destroy tenfold more of the birds named than all the sportsmen in the United States. Nor do they consider that the majority of men and boys who may be seen with a shotgun in their hands are not sportsmen, and do not belong to sp.rtsmen's associations, but are awbrenkers an. poachers. It is this class that sportsmen and sportsmen's associations seek to restrain in their wanton destruction of game out of season, by procuring and enforcing wholesome laws against their nefarious acts. But probably the most destructive of all these causes is the late burning of the prairies by farmers. There should be a law prohibiting and punishing the willful or careless setting of prairie free

the most destructive of all these causes is the late burning of the prairies by farmers. There should be a law prohibiting and punishing the willful or careless setting of prairie fires after March 1.

The good example of strict obedience to the law by sports-men (and all true sportsmen will obey the law), coupled with an earnest and persistent effort to compel the lawless to like obedience to the law, cannot fail to inspire a respect for the Game laws, as well as for those who aid in their administra-tion.

So far as it has come to my knowledge violations of the Game laws of the State have greatly decreased during the

Two prosecutions only have come to my knowledge. a wo prosecutions only have come to my knowledge. Those arose in Douglas county and were prosecuted by the Omaha Sportsmen's Club, for shooting prairie chickens before the 15th of August, 1881. In both cases the persons charged were fined, and the fine and costs were collected. One, I regret to say, was a member of the prosecuting club, and he was summarily expelled from its membership. The other person was not a member of any club.

regret to say, was a member of the prosecuting club, and he was summarily expelled from its membership. The other person was not a member of any club.

The dealers of game in Omaha are entitled to much credit for the respect they have shown to the law. The prompt action of the Omaha Sportsmen's Club in causing illicit traffic in game to be punished, the game to be sized, condemned, and distributed among the poor has had a very salutary effect. But I regret to be obliged to report that game in large quantities was openly exposed for sale in the city of Lincoln during the month of January last, and I am not aware of any effort being made to either prevent it or to punish the offenders. The law is plain and explicit on the subject of unlawful traffic in game, and it is only by a total disregard of such offenses by resident sportsmen that this unlawful practice has been permitted in the capital city of the State, not only this year, but in previous years also.

It is for the mutual interests of sportsmen and dealers in game that the game laws be strictly obeyed. For this reason, if for no other, they should act in concert in enforcing obedience to the laws for the protection of game. I earnestly recommend that an effort be made to form a more intimate relation between the sportsmen and game dealers in concerted organization similar to that had in Chicago last winter.

winter:

A field trial of pointers and setters on prairie chickens was held at Norfolk in September in pursuance of the resolution adopted by the association at its last meeting. The number adopted by the association at its last meeting. The number of entries was small, but as to quality and performances in the field the dogs that participated were a complete success. The same may also be said of the gentlemen sportsmen present. The races were well contested, and the decisions of the judges were so exectdingly judicious and correct as to give entire satisfaction to all purties. The judges, Hon. J. D., Brown, of Missouri Valley; Dr. I. Leas, of Neilgh, and Mr. Perine, o. Wisner, are entitled to the thanks of the association for the able and impartial manner in which they conducted the trials.

There i. little doubt that the result of these trials has had a great influence in establishing the feasibility of field trials on prairie chickens, and inducing the National Kennel Club to hold similar trials at Fairmount, Minn., in September next, which bids fair to be the largest field trial ever held in this country.

I am constrained to recommend the abolition of the practice of pigeon-shooting at the tournament held at the time of

I am constrained to recommend the abolition of the practice of pigeon-shooting at the tournament held at the time of our annual meeting, or, indeed, at any shooting tournament held by sportsmen or under the auspices of sportsmen's clubs. I am satisfied the best interests of our game clubs are antagonized by this practice. It is nevertheless true that the shooting tournament is to the association what horse-racing is to the agricultural fair; both are regarded by large portions of the community as justifiable vices to insure a paying attendance.

Pigeon-shooting is distasteful not only to a large majority of the community, but equally distasteful to a majority of

sportsmen, many of whom are also deterred from taking an active part in such tournaments, or even attending them.

There seems to be little necessity for continuing the practice, since glass balls and clay pigeons afford an admirable substitute and ample facilities for practice in the manly art

of handling the shotgun.

It is well known that I have been an advocate of the aboliof handling the shotgun.

'It is well known that I have been an advocate of the abolition of the practice of pigeon shooting at the time of, or in connection with, the State Association at all times since the unfortunate affair at Chicago, which shot the National Association out of existence. Moreover, its abolition will take from the narrow-minded disciples of the fanatical Mr. Bergh their main stock in trade, so far as the association and sportsmen are concerned. I will at all times second all rational efforts of these extreme people in the legitimate cause of prevention of cruelty to animals or human beings, but wherein it is more cruel to kill a pigeon or prairie chicken with a gun than to wring the neck of a spring chicken passes all rational comprehension. Until these very human people shall devise some method by which they get their loin of beef, cutlet of yeal and chicken salad, without killing the bullock, the calf or chicken in cold blood, or, like the chimerical king of Babylon, forsake the ways of men and subsist upon grass, consistency should bid them hold their peace in this regard.

The financial condition of the association is far from what it should be. There is a deficiency outstanding against the association of \$118.40. Steps should be immediately taken to liquidate this deficiency.

The financial condition of the association is far from what it should be. There is a deficiency outstanding against the association of \$118.40. Steps should be immediately taken to liquidate this deficiency.

From the best information I have on this subject, this has resulted mainly from the premiums awarded at the bench shows of the two preceding years. The entrance fees received were scarcely sufficient to pay the expenses of either, and to pay the premiums awarded recourse was had to the funds in the treasury, which exhausted those funds and left an insufficient sum to defray the legitimate and necessary expenses of the field trials of those years, notwithstanding the utmost economy was used in that behalf. For these reasons, the executive committee deemed it advisable to omit the bench show this year, or until the funds of the association shall be sufficient to meet all attendant expenses and premiums in that behalf.

Inasmuch as the National Kennel Ciub will hold field trials of pointers and setters on prairie chickens at Fairmout Minn., the first week in September, it may be advisable that the association omit its field trials this year. The Fairmout trials will be worth the while of every person interested in legitimate sport with the dog and gun to witness. Sportsmen possessing good-blooded dogs, behind whom they take so much pleasure in the field, should take them to Fairmont and run them. A little careful handling between the 15th of August and the 1st of September, with especial regard to backing and retrieving, will remove all fear of being displaced, while a V. H. C. at those trials will repay the effort. Arrangements will be effected for a reduction in fare and permit to carry dogs free of charge. I can conceive of nothing more pleasing than to witness a contest between those intelligent and faithful animals, and meet with brother sportsmen from all parts of the United States.

Some measure ought to be devised to prevent the wanton destruction of larger game, namely, buffalo, elk, deer, antelope a

It has been suggested that Congress should legislate on the subject. It is very questionable if Congress has the constitutional power to either license or prohibit the killing of game within the jurisdiction of a State. It has been repeatedly held by the courts that all animals that are by nature wild are subject to the legislative control of the States. But Congress may regulate or prohibit its commerce between the States, and may properly legislate to protect such animals in the Territories.

States, and may properly register by the Territories.

Appropriate legislation by Congress prohibiting persons from killing buffaloes, elk, deer, antelope, and mountain sheep between January 1st and October 1st, or killing for market, or for their skins at any time, making the traffic unlawful with proper penalties for violations of the law, would have salutary effect, and would aid the States in enforcing obedience to State laws on that subject. I therefore recommend that this association memorialize Congress upon the subject, and invite other associations to join in that behalf. Gentlemen: Thanking you for the high honor you have conferred upon me by electing me to preside over your deliberations during the past year, I have only to express the hope that my successor will experience the same degree of pleasure in his official relations with the sportsmen of the State it has been my fortune to receive.

B. E. B. KENNEDY.

California Sportsmen's Association.—Speaking of the convention of the California sportsmen at San Francisco, the Sacramento Bee suys: "Some fifteen clubs were represented in the convention, we believe, with a membership throughout the State of nearly 300. There are now few, if any, clubs outside of Sacramento that do not belong to the association, and for the credit of the sportsmen of the capital city we trust that ere long our local clubs will enter into the fold; otherwise the loss will be their own. The president of the association is Senator W. Taylor, of San Francisco; and the vice-president, John K. Orr, is one of the best known sportsmen on the coast. The board of directors is composed of such gentlemen as Crittenden Robinson (chairman), C. B. Smith, Ramon E. Wilson, D. M. Pyle and J. H. Burnett, all gentlemen of the highest standing and intelligence. The association has shown its good sense by retaining as secretary J. P. Spooner, of Stockton, who has done valuable service during the past year. We look for the best results to grow out of this meeting of representative sportsmen. Heretofore there has been no harmony of interests among lovers of the gun and rod, and as a result the game laws have been tinkered at by legislators ignorant of the habits of wild game, until all sorts of abuses have arisen under them. The slaughter of deer in years past for their hides has been shameful, but now we expect to see such action taken by the next Legislature as will, through the aid of local clubs, put a slop to the carnage. The late convention has outlined a splendid programme for the more perfect protection of game

and fishes, and if aided by the Legislature the work of deand usies, and if alored by the Legislature the work of destruction which has gone on comparatively unchecked for the last thirty years will be effectually stopped. The association may rest assured that in the future, as in the past, it will have the aid and counsel of the Bee in all good work to this end. This paper first denounced the action of the supervisors of several counties in giving permission to pothunters and scrub shooters to kill deer out of the lawful seahunters and scrub shooters to kill deer out of the lawful season, and we are glad to see that the convention took a most decided stand on the question and resolved to demand action by the Legislature in the premises. We congratulate the sportsmen's fraternity of California in having organized so faithful a body as the present association to represent and uphold their interests (which are those of all good citizens) as against a band of plundering pot-hunters and dealers in hides and feathered game."

BAKING A BIRD IN CLAY.

THE modus operandi is very simple. Given a bright camp-fire and a bird in condition, the process is as follows. Make a pliable cake or sheet of clay large enough to envelop the bird. Let it be about two inches thick. Smooth and straighten out the feathers, but do not pull a feather or "draw" the bird. Pack it tightly in the clay envelope and it takes the shape of, as it were, a smooth, oblong clay ball. Dig a hole in the earth under the center of the camp-fire, and have the bird with a covering of earth sakes and embers

Dig a hole in the earth under the center of the camp-fire, and bury the bird with a covering of earth, ashes, and embers, about three inches deep.

Do this about 10 P. M., just before you turn in for the night. If you are a genuine woodsman, you are supposed to keep a lively fire all night, and to turn out before daylight in the morning; stir up the fire, start your coffee or tea, and potatoes, if you have any; go down to the icy spring, give your face and hands a cold rinse, dig into your outer covering for that three-inch bit of broken horn comb, unsnarl your hair and whiskers some. Finish off by a concluding wipe with the limp towel that came in around a large loaf of bread and a supply of killikinnick, and then go back to camp and "haul" your bird. You will find him represented by a lump of cracked, hard-baked clay, which, pulled off piecemen), takes feathers and skin clean away, leaving the his gamy flavor and native arona held in and preserved. piecemenl, takes feathers and skin clean away, leaving the well-cooked body of the bird in its naked beauty, with all his gamy flavor and native aroma held in and preserved. Lay the body tenderly on the fragrant section of fresh-peeled bark which serves you for a plate, get out your potatoes, bread, butter, coffee, etc., and then settle down to a breakfast that you will remember long after you have left eampand gone back to the yoke and short-fug-harness of civilization. You eath him with your pocketknife and a birch fork as table implements, and fine salt, black, white, or cayenne pepper for seasoning. When you have finished, throw the "krang" to your dog. You have eaten, but have not drawn them bird. There may be "innards," but you have not seen them. You don't want them anyway. You have found the true flavor of grouse or duck, as you could find it in no other way; and you will come at last to cook all fish of over two pounds weight, and all game birds as large as a grouse or teal, in this same way—when you are not too lazy.

Usually, unless 1 have more than one bird, I get so blessed hungry that I can't want for the above process. Then I dress him, swing him before a lively fire with a piece of moosewood bark, a strip of fat pork between his legs, and roast him. Any bird is good that way—if any.

Leather-Stocking Club.—Oswego. N.Y., May 27, 1882.—At a special meeting of the Leather-Stocking Club last Friday evening there was a full attendance. Three new members were received. A committee of three was appointed, consisting of Hon. N. W. Nutting, Prof. I. B. Poucher and F. E. Hamilton, Esq., to draft resolutions of respect in regard to our president, Dr. McManus, who has moved to St. Louis. The club also voted to a have a glass ball shoot every Friday, to be in charge of the secretary, G. P. Matteson, and to be governed by State rules. The members all seem to be wide-awake this spring, and bound to have a pleasant and interesting season of it. The old club is, as usual, in a good financial condition.—Veterran.

A SIMULATION FATALLY PERFECT.—Jasper Smith of Wise A SIMULATION FATALLY PERFECT.—Jasper Smith, of Wise county, Texas, while out hunting was accidentally shot dead on the 21st ult. I present the substance of the case in the quaint language of the jury's inquest of six persons: "We, the jury before whom was presented the dead body of a man by the name of Jasper Smith, after hearing all the evidence accessible to us, and examining the body found, that his name is Jasper Smith, and that the deceased was secreted in the brush in Cattle Creek bottom yelping up a turkey, and was shot by A. J. Pillows, evidently being mistaken by said Pillows for a turkey."—H. W. MERGILL.

SUMMER EXCURSION BOOKS.—The Grand Rapids and Indiana Railroad, better known as "The Fishing Line," publish a profusely illustrated guide-book to the summer resorts of Western Michigan. The book may be had free on application to A. B. Leet, General Passenger Agent, Grand Rapids, Mich. The Utica and Black River Railroad publish a similar book, descriptive of the Adirondacks, Thousand similar boo Islands, etc. book, descriptive of the Adirondacks, Thousand etc. It is furnished by Theo. Butterfield, Utica,

Gulf City Gun Club.—Mobile, Ala.—The following are the officers of the Gulf City Gun Club elected March 15, 1882, for the following year: Oliver J. Semmes, President; Wm. B. Holt, Vice-President; Jno. F. Summersell, Secretary; Jas. S. Alexander, Jr., Treasurer; Braxton Bragg, Attorney; Executive Committee, Col. Louis H. Kennerly, chairman, Robt. C. Kennedy, Alfred F. Taliaferio, Daniel H. Lay, Jno. J. Crowley, Wm. S. Anderson, Jno. G. Friend.

Spring Shooting.—Henderson, N. Y., May 22.—A few years ago, here on the shore of Lake Ontario, we had grand duck shooting, both spring and fall, but since the advent of the breech-loader and every man and hop has turned hunter, we have very poor shooting. Ducks used to nest here, but now there are only a few wounded ones that are unable to get away. Go on with the good work until spring shooting is abolished.—E. B.

FLORIDA.—Rock Ledge, May 17.—Game plenty in the way of deer and game birds of all kinds. Fishing grand.—G. O. L.

Because you prefer trout-fishing, but can't get away to stay a week, it is no reason why you should not enjoy half a day upon the ponds, or in the nearest stream with the perch. It need not be beneath your dignity if you love the sport. Suppose that Dires, Jr., did spont a fertnight among the Rangeleys and is going to Lake Superior next month, let him snear at your perch-fishing if he will, he probably won't enjoy it half as much as you will if you have not had a sniff of the pond lilies this season. My dear fellow! the man who does these things for snort need not care about the sixe of his who does these things for sport need not care about the size of his who does these things for sport need not care about the size of his game, and with light tackle the yellow perch of half a pound is gamier than a lake trout of four pounds. This question of meat reminds me that wild on the frontiers for six years I never went but once on a butfalo hunt. Such butchering! It was no better than riding up to a drove of tame cattle and blazing away until one dropped; and then the skinning! My companions, however, were as much disgusted with my shooting of prairie chickens, plover, etc., as I was with the buffaloos. For these small deer they had the greatest contempt. They wanted 'meat," and this feeling often extends to fishing. Call the percha third-class fish if you will! I repeat that contempt. They wanted "meat," and this feeling often extends to fishing. Call the perch a third-class fish if you will; I repeat, that with light tackle and proper angling it affords fair sport, and is accessible to those who can neither spare the time or money to go to the haunts of the trout, grayling, bass or maskinonge.—Fred

TROUTING AROUND LAKE MEGANTIC.

IIAD made excursions to various trout streams in different directions and everywhere found the number of trout

TROUTING AROUND LAKE MEGANTIC.

IIAD made excursions to various trout streams in different directions and everywhere found the number of trout volisproportionate to the swams of black flies that I was nearly discouraged and wholly disgusted, albeit my desire for a good day's fishing grow stronger at every failure. In this emergency I applied to "Old Paradis"—everybody knows Old Paradis, As a whisky-drinker, fiddler and trout-tisher he stands at the head. As a carpenter, upholsterer and plasterer he is above the average; his stories are inexhaustable, and his garrulity illimitable. Now, I grieve to say that a long and bitter experience has taught me to totally disregard all stories of wonderful trout-fishing in any and all places. I listen with real or feigned interest, expressing pleasure or wonder according to the size of the story, and then if I wish to go fishing I apply the test; Did he know of any good trout pond that could be reached that day? "Yes, indeed. Eight miles up the lake, on the west shore, a little brook comes in; follow that up for a mile and a half and you come to Grosbois Pond." He had visited it huit a dozen times, and never failed of a good catch, then came the test question: Would he go with me? Certainly, if I could furnish the tackle, as his was all at home. This I readily agreed to do.

The only boat obtainable was a light cedar skiff, owned by Major McAulay of the Prince of Wales Hotel, which had been bought the spring before for a regatta on the Queen's birthday, and, distancing all competitors, had been named Flash. We resurrected it from under a pile of rubbish in the boat house where it had lain all winter, and then found it to be just a wreck, with gaping seams, seats torn from their fastenings, and streaks sun-cracked through and through. However, it was still early morning, and as either of us were fully competent to build an entire boat, we went to work with a will, and by 3 elock had it ready to launch, than we houted up two frightfully deformed oars of entirely different pat

Arriving at the pond I was surprised to find a heavy dam at the foot, and then I learned that the name of the pond did not arise from the size of the timber with which it was surnot arise from the size of the timber with which it was surnounded, as I had supposed, but that a Frenchman of that name built the dam with the intention of building a sawmill, but his funds giving out after damming the brook, he done the same thing to the location and left. The pond is a third of a mile in length, and half that distance across, and is nothing in fact but a huge spring with scarcely any inlets, the water clear as crystal, nowhere more than four or five feet in depth, and the bottom a brown mud of unfathomable depth. Our first care was to build a raft, for which purpose we had brought the axe. Plenty of dry cedar logs were lying close to the bank, and while cutting them into suitable lengths, my ears were recalled with a poble song from a roselying close to the bank, and while cutting them into suitable lengths, my ears were regaled with a noble song from a rose-breasted crossleak hidden in the dense foliage of a huge sugar maple a few rods away. We soon had timber enough for our raft, and as I stooped to pick up the last log, a flood of melody from a cedar thicket, whose top was just illuminated by the red rays of the setting sun, caused me to suddenly pause, all my faculties engrossed in the one sense of hearing. It was the song of the hermit thrush, a song forever associated in my mind with troot fishing in my boyhood's happy days, when free from care I wandered burefoot among the dripping alders down the brook, and heard the swamp robin'a song on every hand liquid and clear, the melodious and flute-like notes floated out on the calm air of

that beautiful June evening, and as I listened, my surroundings faded from my view, and I stood in the deserts of Nevada and saw again the tears in the eyes of a fellow countryman, who told me there that one of the greatest desires of his life was to hear again the song of the hermit thrush. I pulled myself back into the present with a wrench, and saw Paradis looking at me half in amazement, half in contempt. I knew that the poor wretch thought I was afraid of bears. He had not even heard the song.

Launching our raft, we made our way slowly to the center of the pond. There was not a particle of vegetation to be seen, and the bottom could be discerned for rods in every direc-

Launching our raft the song.

Launching our raft, we made our way slowly to the center of the pond. There was not a particle of vegetation to be seen, and the bottom could be discerned for rods in every direction, and the outlook was far from promising. Paradis declared that the bottom was covered in many places, the previous summer, with eel-grass and lily pads, and its total disappearance confounded him. He insisted on fishing with a fly; but knowing that it was not according to the habits of trout to rise in shallow water unprotected by vegetation, and in clear weather, I baited carefully with worms, and being provided with a thirteen-foot rod, I unrecled as much line as I could conveniently handle and by dint of making long casts and letting my bait slowly settle, I succeeded in landing half a dozen nice trout in the very finest color and condition, their sides glistening like silver as they were taken from the water. Our stopping place for the night was to be

landing half a dozen 'nice' trout in the very finest color and condition, their sides glistening like silver as they were taken from the water. Our stopping place for the night was to be at Mycr's Mill, on the shore of the lake, half a mile above the mouth of our brook, so that we had to 'pull for the shore' in order to get to land before total darkness set in.

The next morning we were on the ground in good cason. The sun rose bright and cloudless and the prospect for a successful day's sishing looked dubious; but by adopting the tactics of the previous evening I got now and then a trout, the intervals growing longer and longer as the sun climbed higher in the heavens. Paradis still clung to his fly, although he had caught only two frout. I was about to propose an adjournment, when, happening to cast my eyes to the west, I saw a heavy bank of clouds rapidly climbing toward the zenith. In ten minutes the sun was hidden, the thermometer went down with a rush, and a hail-storm scemed imminent. I was about to flee for shelter, when I heard a musical splash and gargle behind me. Turning my head, I saw Paradis's rod in the form of an arc, and I stood with 'suspended rod, watching the struggle. He soon had him landed, and making another cast, his fly was again seized the instant it touched the water. Then I recled in my line, and with fingers that trembled with eagerness began to tie on a cast of flies. Before I could make a cast Paradis had landed five trout. Then the rain came down, so cold that it was almost searcely handle my flagers soon became so numb that I could trout. Then the rain came down, so cold that it was almost snow, and my fingers soon became so numb that I could scarcely handle my fish; but, for an hour, how the trout did rise! Then the clouds rolled away, the sun came out in cloudless splendor, the fish stopped rising, and we decided that we had enough.

Wet and chilly, we made our way to our boat. The rowing exercise soon warmed us up; but our pile of trout, so far from hindering us, scemed to help us along wonderfully. I reached the hotel tired and hungry, but well pleased with my trip to Grosbois Pond.

PENOSECT.

trip to Grosbois Pond.

IS THE FRESH WATER MUSSEL EDIBLE?

THE following letter from a professor in a Western college THE following letter from a professor in a Western college raises the question of the edibility of the Unio, or fresh water clam. We have eaten them among the Indians, but they were flat and insipid. No doubt they can be made palatable, certainly in the hands of a chef of the famous Ichthyophagous Club, but whether they can be so rendered in ordinary every day, or camp cooking, is a question. The professor writes: As the time approaches for the annual dinner of the Ichthyophagous Club, I wish to call the attention of its caterers to a possible article of food which, as far as I know, they have never tried, and which, if they can render palatable for people of ordinary stomachs and tastes, will permit a new and abundant supply of food to the people of the West. I refer to the fresh-water bivalve mollusks (Unionidae), the so-called "fresh-water clams." In the streams of the Western States these creatures live in vast numbers, and can the West, Free to the desired and the streams of the Western States these creatures live in vast numbers, and can be readily obtained with such simple instruments as a common garden ruke, and often by the hand alone. So numerous are they that I have often found pools or lagoons at the sides of the streams where I could gather a half bushel of them by rolling up my sleeve and plunging my arm in a foot of water or less, and with a small dredge that I use for collecting specimens of aquatic animals, I have scooped up. of water or less, and with a small dredge that I use for col-lecting specimens of aquatic animals, I have scooped up bushels of them. There is nothing in the appearance or smell of these mollusks more disagreeable than that of other creatures found in similar places. I have dissected hundreds of them and see no reason to suppose that they would not be

creatures found in similar places. I have dissected hundreds of them and see no reason to suppose that they would not be as wholesome food as an oyster or clam.

Some of the country people tell me they have tried cooking these "shell-fish" and find them very lough, but I have no doubt that the cooks of the Ichthyophagous Club could soon devise a method of rendering them tender and catable. Should they succeed in finding a way to make these creatures as much of a delicacy as the oyster is now, or any approximation to it, they would confer a lasting blessing upon the people of the West, as oysters can only be brought here now during a few of the coldest months of the year, and then, having been for a long time out of the water, they are far from having the flavor of the fresh "New York" or "Providence River" on the shell. If the club can give the people of this section of the country a recipe for cooking these native shell-fish in such a way as to make them take the place of the salt water ones, we shall have an abundant supply of "oysters" at our very doors, and those who ruin their digestion in the first experiments may console themselves with the reflection that they suffer for the good of their fellow men.

[We hope that the club will procure these mussels and try

[We hope that the club will procure these mussels and try em. If good, our columns are open for the recipe.]

The Opera Singer and the Shad—New York.—Since reading in your last issue, under head of "Information Wanted," the following: "We have been troubled to recall which of the famous opera singers who have visited this country it was that so resembled a shad. Our office boy suggests Matilda Heron, but she was not a singer. We thought at first that it might be Grisi, but there is little adjoese matter about the shad. It might be Alboni, but perhaps some reader can correct us if wrong." I have been much troubled. You don't mean Galassi, for he was a bass. Nor yet Patti, who cast all the others into shad-ow. Ah! here we have it. Marie Roze (roes) a fin-shed artist of the Italian school.—Dick. [You are a Lucca guesser, but have not properly caught on.]

A FISHY COINCIDENCE.

A FISHY COINCIDENCE.

CONSTANT reader as I am of your delightful and valuable journal, FOREST AND STREAM, I venture to avail myself of the invitation which you have extended to the public to furnish brief statements of any extraordinary or remarkable occurrence in the realms of nature, or on the subject of sport by flood or field of a nature suitable to your pages, and which, although it had chanced to come under the observation of the individual writer, was not otherwise likely to be generally known.

The occurrence, which took place here, that is at St. Johns, P. Q., Canada; on the 2d of this month, is at least remarkable, and, so far as I am aware, not to be accounted for by any theory based on natural causes; while to those who regarded the matter from a superstitious point of view, and now trace a connection between this freak of nature and a subsequent most deployable national calamity and tragedy,

for by any theory based on natural causes; while to those who regarded the matter from a supersitious point of view, and now trace a connection between this freak of nature and a subsequent most deplorable national calamity and tragedy, one is constrained to admit that the two events thus taken together, and regarded from the point of view already mentioned, do certainly form what is I believe generally termed "a remarkable coincidence."

On the morning of May 2, 1882, as some St. Johns fishermen were engaged in taking up their nets and night lines, the latter, I understand, stretching right across the Richelieu River in the immediate vicinity of the Barracks, they were filled with feelings of surprised delight, not, however, unmixed with a certain degree of supersitious awe and apprehension as to what dire calamity the omen might portend, at the discovery that they had taken for their prisoners during the past night on one single line no less than seven sturgeon, the largest of which measured six feet seven inches in length and weighed 125 pounds, while the smallest was four feet long and weighed 40 pounds. It is true that sturgeon have been taken singly in this neighborhood, but very rarely, and they have always been, comparatively speaking, small; but never within the memory of those who have been familiar with this river for the last fifty years has anything like the occurrence which I have just related taken place, nor has there, indeed, been more than one specimen of this kind of fish taken at a time, and that one not exceeding twenty-five or thirty pounds in weight. The situation of St. Johns, on the Richelieu, between Chambly and Rouse's Point, and the connection of the river with Lake Champlain in the one direction and with the St. Lawrence at Sorrel in the other, are easy to be seen on the map; and I shall be interested to see if either you, sir, yourself or any of your numerous readers can suggest an explanation based on natural causes which can in any way account for or throw light upon this extraor

To tell the whole trum (and as matters have intried out a feel almost in honor bound to do so) I, in the first instance, purposely refrained from sending this letter for awhile, in anticipation of the enjoyment of a jolly good laugh when I did send it, after the lapse of a reasonable time, at the bare notion of such incredible superstitious ignorance. Now, however, I feel bound to admit that the deplorable national colomity and bloody traredy which has since actually taken calamity and bloody tragedy which has since actually taken place in Ireland has completely taken the wind out of my sails. All I can say is, "Let those laugh who win,"

THE WIGWAM, St. Johns, Canada. E. WHITACRE DAVIES.

FISH FOR COLORADO ANGLERS.

FISH FOR COLORADO ANGLERS.

Editor Forest and Stream:
Sportsmen and others interested in the preservation of game and fish have just completed the organization of "The Colorado Game and Fish Protective Association". The call for a meeting for the purpose, which, by the way, I see copied in the last Forest and Straem, brought an unexpectedly large number of gentlemen together, representing all the more populous counties of the State. Much interest was manifested, and the organization starts out with enthusiasm and most encouraging prospects. Its membership will embrace the entire State, reinforced by local gun clubs in the various counties. Its first object is to enforce present game and fish laws and secure their improvement when the Legislative Assembly meets next winter.

game and fish laws and secure their improvement when the Legislative Assembly meets next winter. It is evident that our front streams are being fast depleted—a loss that is felt more than the destruction of game. It is done by market fishermen, who use dynamite and giant powder for the purpose, thereby killing all the fish within its reach. We did not exactly wait until the horse was stolen before attempting to lock the stable door, but that result was fast impending, and, in fact, actually exists to-day in many of our trout streams and lakes.

The 300,000 New England brook trout hatched out at the State hatchery in January last have nearly all been distributed in the streams on the eastern slope of the mountains and in San Luis Valley. A few are still held to be taken over

in San Luis Valley. A few are still held to be taken over the range. They have done remarkably well, and suffered hardly any loss. Some of those yet at the hatchery are said to be three inches long, though but four months old. Ten thousand rainbow trout from California, received recently, have hatched with a loss of less than two hundred. Com-missioner Sisty is making a fine success of his nursery. B.

missioner Sisty is making a fine success of his nursery. B. Denver, Colorado, May 20.

[The officers of the Colorado Game and Fish Protective Association are: President, W. B. Byers, Postmaster of Denver; First Vice-President, D. H. Dougan, Mayor of Leadville; Second Vice-President, Charles L. Hanna, of Greeley; Third Vice-President, T. Beaty, of Pueblo; Treasurer, J. Cook, Jr., of Denver; Secretary, J. S. Sedam, of Denver. For membership apply to J. S. Sedam, Secretary J. tarv.]

POTOMAC BLACK BASS ANGLING,—In reference to the angling ground resorted to by Chambersburg anglers, I would like to state the precise grounds. The place is about midway between Falling Waters and Williamsport, on the Potomae River, and it can be reached via Chambersburg to Falling Waters. At the latter place good bass fishing can be had and comfortable quarters procured at the hotel. But should the angler wish to try the larger fish, about midway between Falling Waters and Williamsport, no doubt board could be had at any of the farm houses on the shore. My informant, Dr. W. S. Hope, of Chambersburg, camps yearly at the place, but at a season when none but a thoroughly acclimated person could stand the malarial tendency of the region. Late June or early July would be the safest period for a stranger. The minnow is the best bait for a stand-by between Falling Waters and Williamsport, but the most taking lure, when obtainableis a small frog or toad.—Homo, ing lure, when obtainable is a small frog or toad.-Homo,

NOTES FROM THE RANGELEYS.

NOTES FROM THE RANGELEYS.

THE ice left the lakes yesterday, and sportsmen are arriving daily. The senson opens auspiciously. The proprietors of the various hotels and camps have renovated and enlarged their accommodations since last season, and inform me they will be crowded with those already booked. No doubt there will be the greatest rush here ever known. The son-to-be-completed telephone between this place and Phillips doubtless has given an impetus in this direction. May 1 found many of the residents cutting holes through the three feet of ice in the cove just at the landing, and soon commenced bauling out immense numbers of trout and land-locked salmon. This continued while the ice was firm. Of late, however, the fishing has been done from the landing and boom of logs adjacent. The writer has seen many fish thus taken exceeding three and one-half pounds weight. This is evidence that fishing here is not played out, nor anging a failure. Those securges of the waters, loons, are meeting with a warm reception, one person having shotfour. When it is considered that each loon consumes its own weight of fish daily, it will be readily seen that their destruction is a desideratum. Why not pay a bounty for their scalps as well as for foxes, bears, hawks and other deprodators on game? Capt. Yred. C. Barker made this place a flying visit three days since, footing it around on the east shore of the big lake to Indian Roet, something like twenty miles. He returned next day and launshed his steamers, and is already plying them. He states that he has never had so many applications at the opening as now. By the way, I learn that the versatile captain has lately writen a biography of John Danforth, of Parmachence. Of course it is a labor of David and Jonathan. I hope to secure a copy soon. The life of Danforth as a hunter and backwoodsman, as is well-known, has been eventful, and in many of his most interesting adventures the captain was his companion. Since my last communication, the Oquossoe has changed hands, art is no

STATISTICS OF MAINE FISHERIES.

CENSUS Bulletin No. 278 gives the statistics of the fisheries of Maine, prepared by Mr. R. E. Earll. From an examination of the tables it is found that, if the oyster industry be neglected, Maine ranks second only to Massachusetts in the extent and value of her sea fisheries. The following figures show the extent of the fishing interests of the State in so far as they relate to the sea fisheries:

Persons employed	
Vessels employed	
Tolliage of same	
Fishing boats 5,920	
Capital dependent on the fishery industries	
Pounds of sea products as they come from the water 2 2,048,419	
Value of sea products as they come from the water	
Enhancement of value in process of preparation	
Value of sea products in marketable condition 3,614,178	
0,014,175	

A similar summation for the river fisheries, as shown by Mr. Atkins, would be:

Persons employed	1.591
Capital dependent	S78 2 18
Pounds of fish as they come from the water Pounds of fish in marketable condition	4,730,244
Value of river products as sold	. 3,794,180
Table of the products as sold	. 2120,040

By combining the tables of the sea and river fisheries, we have the following totals for the fishery interests of the

Persons employed	62
Capital invested	100
Pounds of fishery products as they come from the water. 200 778 6	93
Pounds of fishery products in marketable condition	28
Value of fishery products in marketable condition \$3,739.2	21

Many valuable tables are given, but we can only select a few. The two following will be of interest:

Table XXXIII gives by species the quantities of each of the various kinds of fish and other products taken, and the value of the same as they are finally sold. If the weight of the products alone is considered, the six principal species, placed in the order of their importance, are as follows:

Pounds.

Cod (Gadus morrhua)	Pounds.
Cod (+adus morrhua),	56.004.325
Herring (Clupea harenous)	94 695 199
Mackerel (Scomber scombrus)	21 694 455
Hake (Phycis chuss and P. tenuis)	21,417,739
Haddock (Melanogrammus æglefinus)	17,728,735
Lobster (Homarus americanus)	14,231,180

If, however, the money value is considered, the relative importance of the species is somewhat different. The following arrangement represents the fisheries according to their

Herring fishery (including the sardine industry)	\$1,043,799
Mackerel fishery	659.3 ()
Col tishery	650,753
Lobster fishery.	412,076
Hoke fishery. Haddock fishery.	278,335 225,393
Amendoor Habity	20,015,

TROUTING IN MICHIGAN.

THE trout season has opened, and the speckled beauties

THE trout season has opened, and the speckled beauties are gamy, as I can assure you. Thursday night found me en route to their haunts, nine miles from here, and on a stream which, for brush and windfalls and trout holes, can't be beat in this part of the country, stopping over night at a friend's who lives half way.

Friday morning found A. M. Carr, our host and a genuine disciple of Izaak, and myself on the South Braach, and eager for sport. After fishing nearly half a day and catching a few fine ones, he concluded to go to the north and see if he could do better. He had hardly got out of sight before I struck a school coming up stream, and then sport began, and right royally, too, for the trout were hungry and bit their prettiest. I am not a pot-fisher, but I confess to a longing for a big catch, and I got it that time if I ever did in my life. I confess to having captured before we left there an even 98 splendid trout, while my friend bagged 101, which we found on returning home to pull down the scales at thirty pounds and a few ounces. We found sand flies as thick as any one can wish, but "dope" fixed them sure; 'twas fun for us, but death to the trout. I took seventeen nice trout out of one hole, something that I never have seen or heard of before, and I have trouted for nearly twenty-eight years, off and on.

Gravling are found about cighteen miles from here.

and on.

Grayling are found about eighteen miles from here. A
fisherman on the Ausable took in one day over 300 pounds.

He fishes for the market, shipping to Chicago.—W. E. M.

Furn Liste, Mich., April 21.

He Must Be Believed in Foture.—The regular meeting of the Toledo Fishing and Hunting Club was recently held in the parlor of the Burnett House. The question of the truthfulness of the treasurer, J. E. Gunckel, as to his fish stories, was the subject of a warm and animated discussion, the irresistible tendency of the treasurer to deviate from the facts on piscatorial matters being held by some to be true beyond controversy, while others as stremously contended for his entire truthfulness and reliability. It was unanimously agreed that a committee be appointed consisting of of three members in good standing, who are practically to test the character and truthfulness of Gunckel's lish stories. The chair appointed E. P. Moore, Fred. W. Baker, and Maj. W. R. Leilet, with instructions to meet the accused Gunckel at Ten Mile Creek, at the boat house of the club, the next Saturday at 2 o'clock P. M. sharp. And it was further ordered, that, as a test of said Gunckel's ability to do all and several the divers and sundry exploits whereof he had boasted to the wonder and astonishment of several Chicago drummers, that if he do not, at the time appointed, catch and land more fish than any member of the committee, then the charges of gross and inexcusable exaggration shall be deemed to be proved, but if he shall make good his boast, the committee and all other members of the club shall hail him as the boss fisherman of the club, and under no circumstances in the future doubt any of his statements, however unsupported or marvelous. The result of the fishing excursion in testing the ability and truthfulness of J. E. Gunckel as a true fisherman was a complete success. He not only excelled one of the committee, but caught and anded more fish than the entire committee together. This was not only a test trial as to Mr. Gunckel's ability as a fisherman, because it is a recognized and an undisputed fact that any person trailing from Tulpekieden, where Bill Bickham lives, a man can eatch fish in any kind of water or weather. Mr. Moore

F. W. Baker, not one bite; Major Lent, one sheepshead, two bullheads, one pike.

The Big Shad Ner of the Delaware—The ferry loats sailing from South street wharf, Philadelphia, to the shad-fishing shore at Gloucester, N. J., every haft-hour in the day, are now carrying many of our citizens, among whom are not a few hades, to witness the hauling of the big mile seine, which takes place three times daily at these grounds. Your correspondent on last Wednesday afternoon visited Gloucester and saw the high-water haul made. Although the number of shad caught was small owing to the chilliness of the water, the catch of herring was large. The foreman of the land end of the net informed me the work of the Fish Commission was being felt all along the Delaware River at the different fisheries, and had it not been for the valuable work done by the Commission in the past few years, it would not have paid to fish either at Howell's Cove or the Gloucester shore, shad were becoming so scarce. The stopping of Sunday gill net fishing has also given the shad a chance to come up the river. Since the opening of the season at Gloucester, the big net has averaged from 4,000 to 6,000 shad per day, not counting the herrings which have been taken in the same seine to the number of 20,000 to 30,000. The sow from which the large net is laid out is manued by eighteen or twenty sable oursmen with their white captain, and before the end is brought to shore a scope of two miles is inclosed by them, and the ropes being secured to two capstans worked by horse power, the net is gradually drawn in. This work occupies fully two hours, and during the operation the shores where the landing is made are thronged with spectators anxious to see the result of the haul. In the twenty-four hours of the day, five fishings are made, three during daylight and two during the night. Thirty hands and two horses are employed to work the seine, and the work has been generally quite a profitable one. A mile orso south of the Gloucester fishing shore, is Howell's Co

the water.—Homo.

Poaching on the Potomac.—Washington, D. C.—I would call attention to the unlawful fishing in the Potomac at Weaverton, three miles below Harper's Ferry. I think if the Virginia authorities were more alert they might, to a great extent, suppress the catching of boss with dip nets at and near the Chain Bridge in that State. If it were in the District of Columbia that they did such a thing, they would soon be brought up with a round turn. It is a notorious fact to all who fish near the Chain Bridge, Little Falls or McQuade's that there are men living in the vicinity of those places who net biss at all seasons except when the river is frozen. Mr. Levi Woodbury, proprietor of the St. James Hotel, of this city, than whom there is no keener sportsman, either with rod or gun, was at McQuade's on Wednesday, and though the weather was very unpropitious, he succeeded in catching eight fine ones, the largest carrying down the scale to four and a half (44) pounds, which to save in that swift current was quite a feat.—Potomac.

Those Cape Cod Salmon.—Charlestown, N. H.—I notice a little paragraph in Forest and Streem just received relating to salmon taken in Massachusetts, off Cape Ann and Cape Cod, and supposing that they are either from Maine or the Connecticut River. The probability is that they are from neither locality, but are the fish with which Massachusetts

and New Hampshire have been so liberally stocking the Merrimae for the last few years, and which have made their appearance in that river for five years past about June 1. It is only a few miles from the mouth of the Merrimae to Cape Ann, and so round into Massachusetts Bay, and salmon have been taken all along the eastern coast of Massachusetts and New Hampshire, from Portsmouth, N. H., to the northward, down to Cape Cod, while it is 200 or 300 miles in either direction to the Connecticut or Penobscot rivers. The Merrimae is now very full from the late rains, and we are looking anxiously for the appearance of the salmon, which will have a good chance this year to get up the various falls and fishways. Tell the Ichthyophagi to "fight shy" of fresh water mussels. I experimented on them once to my subsequent grief.—Samuel Webber.

Tennessee Notes.—Nashville, May 26.—An angling club has been chartered here, with Gen. Ira P. Jones at the head. I have heard of but very little sport this spring, the weather having been too unfavorable, and the streams too high. The Cumberland Angling Glub gave a grand reception at their grounds a few days ago. The laddes were annused by catching several fine bass from the ponds, and after a handsome collation enjoyed themselves in the mazy dance. They expected your correspondent to write up the affair, but not to be present at the envertainment. Sectioned, etc.—J. D. H.

Gars.—Batavia, O.—The gars, Lepidosteus, are swarming up on their annual migration. I stood on a "riffle" the other day and watched, for over an hour, a solid mass of them, twenty feet wide, and piled up on each other three or four thick, trying to pass the rapids. Am devoting most of my time now in inducing the small boy to kill them, by the offer of a reward of \$.05 per head. Every old musket and fish-spear in town is pressed into the service, and I am afraid my pocket will soon be sadily deplated. Unless we can get rid of them, goodbye to salmon and bass!—If. P. U.

ADIRONDACK LAKE TROUTs—Blue Mountain Lake, Hamilton County, N. Y.—Pifty-two pounds of lake trout were taken here in two days! if hing and trolling, by Mr. C. W. Durant, who is stopping at the Prospect House, the two largest weighing nine and a half and eight and a half pounds, Fishing has never been better in this vicinity than it is this

STRIPED BASS IN New Jersey.—Highland View, Oceanic, N. J.—I have just succeeded in taking the first bass (striped) of this season. Caught trolling, weight 3, 2 and 2 pounds respectively. Prospect good for bassing this season. The boys are catching a few soft crabs. The water is too cold for them to shed much as yet.—C. H. Wild.

More Dead Fish.—Capt. Thomas Simmons, of the brig Edward Hatton, which arrived on Monday, reports that he passed through sixty miles of dead fish between latitude 39 deg. and $37\frac{1}{2}$ deg.

THE AMERICAN FISHCULTURAL ASSOCIATION

PROCEEDINGS ELEVENTH ANNUAL MEETING.

[CONTINUED].

NOTES ON THE BREEDING, FOOD AND CAUSE OF THE GREEN COLOR OF THE OYSTER.—(Concluded.)

BY JOHN A. RYDER.

NOTES ON THE BIRELING. FOOD AND CAUSE OF THE GREEN COLOR OF THE OYSTER.—(Concluded.)

BY JOHN A. RYDER.

OF no less moment than the introduction of radically new and more certain methods of propagation, is the question, "Upon what does the oyster feed." and, what are the conditions of life which will most quickly bring the animal into a plump marketable state? The most contradictory and contusing statements are made by different persons in regard to the feeding habits of the animal, and anomalous as some of them may at first appear, many of them doubtless have some foundation in substantial fact.

Prof. Leidy, at a recent meeting of the Academy of Natural Sciences of Philadelphia, stated it as his belief that oysters feed at times on the zoospores of certain alga, as those of *Crea latissium*, see cabbage which he knew from personal observation to be green, and which he thought might possibly be the cause of the green coloration of the soft parts of the animal as sometimes observed in certain localities. Very possibly this may be the case, but judging from what I have seen and heard from oysternen, as well as from what I have seen and heard from oysternen, as well as from what I have seen and heard from oysternen, as well as from what I have read in various publications relating to this matter, I am not inclined to regard this as the only source of the unusual green that of the flesh of the oyster. I hope to be able to show that it is probably of vegetable origin, and therefore quite harmless. That it is not copper we may be equally certain, as Prof. Lewis's tests have shown, for any such quantity of a copper sait as would produce the green last recently been investigated by two French savants, MM. Pursegar and Decasine, who found that when perfectly white-fleshed oysters were supplied with water containing an abundance of a green microscopic plant, the Natucula astreria of Kützing, their flesh acquired a corresponding green that. These investigators also found that if the oysters, which they had caused to be s

existence. This is not the place for the discussion of the purely scientific aspect of this question as already ably dealt purely scientific aspect of this question as already ably dealt was all the property of the control of the green color of the cyster.

But has discovered that he could cause colores infusoriat to become green by feeding with green palmellaceous cells, which, moreover, did not die after the death of their hosts, but continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live, growing and developing within the lattice of the continued to live the continued the lattice of the continued to live the lattice of the continued to live the continued to live the continued to live the lattice of the continued to live the lattice of the continued to live the continued to live the lattice of the lattice of the lattice of the continued to live the lattice of th

were very deeply tinged in certain parts, so much so that I decided to make as critical an examination as my resources could command.

Spectroscopic investigations gave only negative results, as it was found impossible to discern any positive evidence of chiorophyll from the spectrum of light passed through thin preparations made from specimens of green-tinted oyster, some of which, like those made from the heart, are decidedly green to the maked eye. There was no absorption noticed at the red and blue ends of the spectrum, such as is observed when the light which enters the slit of the spectroscope first passes through an alcoholic solution of leaf-green or chlorophyll, indeed, the spectrum did not appear to be sensibly affected by the green substance which causes the coloration of the oyster. No attempt was made to test the matter with the use of alcoholic green solutions obtained from affected doysters, as the former are not casy to get with a sufficient depth of color, because of the relatively small amount of coloring matter present in the animals. Unstained preparations were used in all of these experiments.

Finally, in order to see if the color was due to the presence of some green compound of copper, Professor H. C. Lewis, of the Academy of Natural Sciences of Philadelphia, kindly made some delicate tests for me, using small dried fragments of an ovstor very deeply tinged with green in various regions, especially in the livor, connective tissue and manule. The fragments were burned in a bead of microcosmic salt and chloride of sodium on a clean platinum wire in a gas fame; this test did not give the characteristic sky-blue flame which should have been developed had there been the minutest trace of copper present.

It is therefore clear that the substance, whatever it may be,

this test did not give the characteristic sky-blue flame which should have been developed had there been the minutest trace of copper present.

It is therefore clear that the substance, whatever it may be, is not a corrosive metallic poison derived from copper, which if present would almost undoubtedly be detected by a peculiar acrid metallic taste, which would be experienced when one ate such oysters. In making some practical tests as to the relative qualities of such oysters as compared with white-fleshed ones, opportunities for which were kindly furnished me by Mr. J. M. Carley of Fulton Market, I failed to detect the slighest difference of flavor. Such also is Professor Leidy's verdict, who informs me that he made a similar experiment, and a restauratour with whom I discussed the matter, declared that he was in the habit of selecting them for his own eating, preferring their flavor to that of the white oysters. It has been objected that the green color could not be derived from diatoms, because these organisms are, as a rule, apparantly brown rather than green. This objection I find to be based upon a misapprehension of the structure of the Diatomacce, as may be gathered from the following general statement taken from Sachs' "Pext Book of Botany," one of the latest and highest authorities. On page 233 he says:

"The dilatoms are the only algae except the Conjugadae in which the chlorophyla occurs in the form of discs and bands, which the chlorophyla occurs in the form of discs and bands, occording to the foreigning quotation, that it is not impossible for distomate to be the cause of the control o

often be noticed.

The most important glandular appendage of the alimentary tract of the oyster is the liver. It communicates by means of a number of wide ducts with a very irregularly formed cavity, which we may designate as the stomach proper, in which the food of the animal comes into contact with the digestive juices poured out by the ultimate follicles of the liver, to undergo solution preparatory to its absorption during its passage through the singularly formed intestine.

If thin slices of the animal are examined under the micro-

scope we find the walls of the stormach continuous with the walls of the great butted of the liver. These great duties divide walls of the great butted of the liver. These great duties divided butted of the liver of a lighter animal. Its divided the liver of a higher animal. Its function in the oyster is the same as that of three different glades in us, viz., the grantless arrowness the same as that of three different glades in us, viz. the grantless arrowness and liver, to which we may add that suppose the pancress and liver, to which we may add that a propresented by a single organ in the oyster. In fact, experiment has shown that the secretion of the liver of mollinks are represented by a single organ in the oyster. In fact, experiment has shown that the secretion of the liver of mollinks that appendings of the linestine of or the organic that the same and the

anner. As to the influence of brackish water in improving the con-

pition of oysters, let me observe here that those who hold to that opinion appear to forget to bear in mind that brackish water beds are often in the case just described; that being in shallow, relatively quiet water, an abundance of food is generated which is rapidly consumed by the animals, which quickly brines the latter into condition, the brackish state of the water getting the credit of the result.

In my report to Major Ferguson, I stated my belief in the practicability of establishing permanent oyster banks or ridges. Durine the last summer in the Cherrystone River, Virginia, I saw my idea practically realized. A heap of shells had been scattered so as to form a low solid elevation which was submerged twice a day by the tide; upon this spat had caucht and grown until the whole in two years was as completely and solidly covered by living natural-growth ovsters as any good natural bank. The desirability of using the poorly grown stock from natural and artificial banks as "seed" for planting appears reasonable, and could no doubt be made pro"table where banks of a sufficient extent could be ostablished, from which a supply of seed could be obtained.

REPORT OF THE MAINE COMMISSION

REPORT OF THE MAINE COMMISSION.

THE report of the Commission of Fisheries and Game of the State of Maine, for the year 1881, is at hand. The stringent fishery and game laws enacted in the Dominion of Canada, requiring permits for anching in most sections, while licenses for hunting, trapping and shooting in several of the provinces are required to be purchased at prices varying from thirty to twenty-five dollars, has precipitated upon the forests and streams of Maine an army of visitors. The protection of game has been added to the duties of the commission without adequate means to accomplish much in this direction, and new legislation is needed to enable them to properly fulfill the requirements of their onerous duties.

The run of salmon began unusually early the past year, and was remarkable for the size of the fish, although it was the smallest in numbers for the past three years, at the same time exceeding the catch for the previous ten or twelve years. Their spawning having been undisturbed a large run of smelts is expected this year. The State's share of salmon ova, added to contributious from Prof. Baird, enabled the commission to distribute over half a million of fry within the State in the waters of Penobscot, Kennebec, Androscoggin, Presumpscot, Saco and the Machias rivers. In the fall of 1831 their dividend of salmon eggs from the joint establishment was 1,680,000, and these were to be hatched and distributed to the rivers named. These salmon works are owned by the United States and such individual States as contributed to their construction and arrancement. The whole is under the control of Mr. Charles G. Atkisns, assistant to the U. S. Fish Commission.

Each subscriber receives a dividend of eggs according to the amount of his subscription. The fish are purchased alive of the river itshermen at the market rate per pound, at the time when it is lawful to take sulmon, and all that the Atking purchases are just so many fish saved to the State, less the number which may die from bruises received in h

Connecticut, \$300, 102,000 eggs; United Silvers, \$1,001, 500,000 eggs of land-locked salmon were received. These were hatched and distributed in Cold Stream pond at Enfield, Maranocook at Readfield, Wilson's pond in Auburn, and Rangeloy lakes. The plantings of former years have been a success. Prof. Baird sent from Havre de Grace 2,000,000 shad fry, which were deposited in the tributaries of the Penobscot and Kennebecrivers. He also presented the State with 1,000,0000 whitefish eggs from the establishment of F. N. Clark, Northville, Mich., of which 15,000 were put in Rangeley and the remainder in Mooselucmeguntic Lake.

FISHCULTURE IN OHIO.

HEREWITH send you a brief summary of the work of the Ohlo Fish Commission for the year just ended. We have two hatcheries, one located at Toledo and the other at Sandusky. They are both supplied with all the latest improvements and devices for the successful working of spawn and the hatching and handling of the young fry. We have in use over four hundred of the Chase automatic jurs, which are certainly a great success, being very economical, simple and convenient, and are doing away entirely with the old process of trays.

taminy a great success, being very economical, simple and convenient, and are doing away entirely with the old process of trays.

Although last fall was the most unfavorable season since the organization of the commission for securing eggs, we succeeded in taking about sixty millions or over of the whitefish spawn, and at least fifty millions were hatched and successfully planted in the head waters of Lake Eric, beginning at Stony Point, near the mouth of the Detroit River, and following the north shore around to the south shore as far as Niagara Reef, below West Sistor Island. There was also planted around the islands and island fisheries and at Huron about thirty million young whitefish. They were deposited very carefully, from three to six miles from the shore in front of the fisheries from which the spawn was taken. We have also deposited through the interior of the State, in various public streams and private ponds and lakes, several hundred ferman carp, about 7,600 young black bass, and 20000, brook that decimal carp, about 7,600 young black bass, and 20000, brook that decimal carp, about 7,600 young black bass, and 20000, brook that the decimal carp, about 7,600 young black bass, and the decimal carp.

miblic streams and private ponds and lakes, several hundred German carp, about 7,600 young black bass, and 20000, brook trout.

It was the desire of the Board of Commissioners that I should do all that was possible for the interior of the State, so I conceived the idea of hatching our Lake Erie salmon, or, as some call them, pickerel, or wall-eyod-pike, although it was considered by some fishculturists as an impossibility. I am lappy to state, however, that I have successfully hatched this spring, at our Toledo hatchery, several millions of this species which we are now phanting through the interior waters of our State, and have also several millions more of eggs now in process of hatching at our Sandusky hatchery. The fry are very small when lirst hatched, and carry a large food sac, but are quite strong and healthy, losing the sac in about ten days. They then commence taking on the color of a fish up to that time they are colorless and as transparent as water itself. We find them a hardy fish to transport. They will live five days without change of water, we cannot at this date say how much longer, as that is the longest time we have tried the experiment. We will have them on hand for at least two or three weeks yet, as our eggs are not all hatched. Should they thrive, the time is not far distant when all the streams of Ohio will teem with the most delicious of food fish. While the spawn is hard to take, and difficult to fertilize and separate, still it can be successfully manipulated and hatched.

One thing more I would like to call the attention of your space. It is with regard to the passage of a law to increase the size of meshes in fishing nets for the protection of young fish. Is fact well understood by all fishermen, that there are no small or young fish caught he heated term. At that time the adult fish retire from the margins of our lakes to the deeper and cooler waters for rest. The young and old fish are seldom found together, as fact well understood by all fishermen, that there are no small ones,

rersa. Now a law that would prevent all fishing from the irst of Junc to the first of October, with all devices except he hook and line, would accomplish the desired end without yorking au injury to the present owners of small meshed

first of June to the first of October, with all devices except the hook and line, would accomplish the desired end without working an injury to the present owners of small meshed twine.

Then again, it is not claimed that there will be any less of the parent fish cancht, but only the young will be saved. Now twine that will let young whitefish escape will also let herring, perch, saugers, or sand pike, sunfish, etc., escape, thus taking from the market an immense amount of cheap food, which is chiefly used by the laboring classes. This would render the article of fish a luxury upon the market, and, to a great extent, would place it beyond the reach of the poorer class; and again, by allowing the perch, sunfish, saugers, etc., and in fact all the above-named lish to escape, we are turning loose millions upon millions of "pirates" to prey upon the young whitefish that we are hatching and planting yearly in the Great Lakes. Now, what I would recommend would be a convention called by the commissioners of the various States, and together recommend the passace of a law applicable to each State. A law that would work well on our most northern lakes would not apply to lakes Erie and Ontario. Now, if a convention could be called and the commissioners of the Province of Ontario invited to unite with us and agree upon a uniform law, that would be a benefit to all and an injury to none, it would be a grand good thing and put to rest forever this vexed question.

In conclusion permit me to say that, after a careful study of ten vears and an experience of twenty in catching, buving and selling fish, and that too in no small quantities, I have come to the conclusion that there should be some guant thrown around the enterprise or in time the lakes will be stripped of whitefish and trout and, after giving the subject throw and an applicable to the years of the summer, for a term of from five to ten years, would have the desired effect; it would at least make these two species of sha as plentiful as herring now are. We are all d

FISHCULTURE IN MICHIGAN.

HEREWITH send you a list of the plants of whitefish and land-locked salmon made by our State Fish Commissioners for the year ISS2. Please notice the date of the first plant of whitefish. You will see the great advantage we have over most of the other States by using the waters of the great lakes, which are of course the natural water to hatch them in. I dely any one to show as large and strong fish as we have planted this spring. We made the plants as follows:

March 16. Detroit River

A BOOK ON THE CARP.

M.R. FINLEY has given the public a little book* to assist it in successfully breeding the carp. In the preface the author claims long experience in pond-making for other than fishcultural purposes, and that his only object is to instruct, without pretence of literary excellence, and that he has had twenty-eight years' experience in goldfish culture, a tish whose habits are similar to those of the carp, and three years with the carp itself.

In the chapter on varieties of carp, we determine the author is the same of the surplement of the carp.

habits are similar to those of the earp, and three years with the carp itself.

In the chapter on varieties of carp, we do not agree with the author in thinking that the scale carp is best, either in appearance or anything else, and that the mirror and leather carps "appear to be a kind of admixtures of some other fish, and are not the true carp." The fact is that the scale variety are the original, and the others the improved, the scales having having been bred off them by careful selection and cultivation. The book contains some information to the beginner, but he will look in vain for instructions as to size and shape of ponds, depth, slope of bottom, preparation of spawning beds, etc., although a chapter on ponds is given. Nor will he find any mention of the proper water plants to be grown as food for the fish, the author merely contenting himself with a statement that carp should be fed, and that he has used "stale bread, broken crackers and kitchen offal of all kinds."

*The | German or European | carp, | its wonderful growth and fecundity, with instructions for its propagation and culture as an article of food, for profit and as a | farm product. | Also | twenty-eight years' experience as a maker | and maintainer of artificial lakes | and ponds, with full instruct | does in all that pertains | thereto. | The food | Fish and its earn of the aquation | — | Extent of carp of the food | Fish and its earn of deep Filey, Pittsburgh, (East End), of the properties of the product of t

THE HUDSON SHAD.—In commenting upon the recent deposit of shad fry in the Hudson River, noticed by us elsewhere, the New York Times of May 26 says: "As no arrangements had been made so far by the New York Fish Commissioners to stock the Hudson with shad, the California trout having apparently occupied their attention, this shipment of young shad may be considered as most opportune. In fact, save for special purposes, it seems as if a portion, at least, of the labors of the New York Fish Commission could be dispensed with in the future, since the United States Fish Commission can, with its extensive organization, do the work cheaper, and has all necessary experience in the transportation of the young tish. This method is something like the repetition of the plan devised by Mr. Blackford for the hatching out of sea tish, which depends on procuring the eggs wherever the fish are the most plentiful. It becomes, then, practically easier to obtain the eggs of the cod in New York

than elsewhere. Once that the eggs are taken from the fish and fertilized, they can be hatched either at the point where they are derived or elsewhere, and can then be shipped to almost any place for distribution. The shad in the Potomac are very abundant, and, having been made so by the labors of the United States Commission, the advantages derived from fisheulture are made quite manifest in the present case. One million of young shad are perhaps barely sufficient for stocking the Hudson; therefore it is to be hoped that more may be sent. The work of the New York Fish Commissioners need not, however, cease. If they wish to keep abreast of the wants of the day, they must endeavor to carry out the newer plans of stocking the seas and sounds in the neighborhood of the city with salt-water fish. The brook trout or the California trout may serve the purposes of the sportsman, but they never will furnish food for the million, and it is to feed the people generally that the money appropriated by the State for fishcultures should be used. What is wanted is shad, striped bass, cod, even Spanish mackerel, not the luxuries of the rich, but the food of the people."

FISHCULTURE IN CANADA,—Magoro, Quebec.—The fish

FISHCULTURE IN CANADA.—Magog, Quebec.—The fish hatchery here at Magog is working successfully. They have already this season put out 50,000 whitefish and 50,000 lake trout into Lake Megantic, and the same number in Black Lake. Also 100,000 whitefish and 60,000 lake trout in Lake Massiwippe, 100,000 whitefish and 60,000 lake trout in Lake Massiwippe, 100,000 whitefish and 50,000 lake trout in He hatchery, and 30,000 whitefish and 25,000 lake trout in Brompton Lake, and 25,000 whitefish and 15,000 lake trout in Key Fond. There are in the troughs now at least 125,000 whitefish and 350,000 lake trout to distribute.—Stan-

FISHCULTURE IN OHIO.—Batavia, O.—A week or two ago I helped Mr. Douglass, of the Ohio State Fish Commission, to plant 900,100 pike-perch or "Ohio River salmon." Steestelhium salmoneum, in our little stream here, the east fork of the Miami, and am expecting every day 300,000 black bass, M. atolomice, to add to them.—H. P. U.

THE DOG.

His History and Qualities.-II.

BY SENEX.

THE DOG.

His History and Qualities.—II,

BY SENEX.

It is said of a dog belonging to Petrarch that he snatched a naked sword from the hand of a villain who attacked him, and thus saved the life of his master. Plutarch relates an interesting incident, attesting the remarkable memory of the dog wherein King Pyruhus commanded his whole army to march in single file before a dog, who for three days guarded a mul dered corpse without eating or drinking, and who sprang upon the culprit and seized him by the throat as he filed by him. It is related that a dog of Henry III. of France became perfectly furious toward the regicide monk Clement as he advanced to the audience in which he slew his sovereign, and could with difficulty be retained in an adjoining room. The sagacity and intelligence displayed by the dogs of the monks who inhabit the passes of the Alps in rescuing travelers from almost certain death is known and appreciated by all who visit these snow-clad mountains. In our large cities it is a frequent circumstance to see the terrier standing guard over his master's wagon with all the fatibitulness of a human employe. In la belle France the chimney-sweep bids his dog to "down" on his soot bag, and he will rather suffer death than leave his post for an instant; and the merry wagoner trusts the reins to his fatithal dog, while he loiters behind in the passes of the dog may be brought by careful education and attentive training; and when we consider how remarkable his exploits become, even under mediorer instruction, we are forced to the conclusion that if he was educated with all the assiduity and care that is bestowed upon the sons and daughters of our own race, he might prove an apter scholar in certain qualities than some who scarcely rise higher in the plane of intelligence than his canine companion.

The various feats performed and the wonderful sagacity displayed by the "learned" dogs that are exhibited throughout the country by show men and women, show to what a state of perfection they may be raised by a

of this wanton experiment, and the utter usclessness of the act almost overpowers our admiration of the maternal love, and we blush for humanity when we contrast the cruelty of the "person" with the invincible affection of the dog. Who would, while contemplating this piece of human barbarism, undignify man by the uncomplimentary epithet of a dog, when the truth is the attributes of the latter shine transcendently bright when held up in contrast with his lordly master. It is a true saying, and worthy to be believed, that a man is known by his treatment of his dog; and I venture the assertion that no really true man, no genuine type of God's image, can inflict unmerited punishment upon his faithful canine companion. It is only the shams that maltreat the poor, unoffending brute.

can indict unmerited punishment upon as author came companion. It is only the shams that maltreat the poor, un-offending brute.

Let us call to memory those expressive and sentimental lines of the poet, written to commemorate his attachment to his lost companion, as a tribute of affection to his dog whose death he lamented and whose name he honored, viz.:

"Lie here without a record of thy worth Beneath a covering of the woman earth! It is not from unwillingness to praise— More thou deserv'st; but this man gives to man, Brother to brother—this is all we can.

If no stone is raised, no shaft erected in these monumental days to commemorate his many and excellent qualities, his virtues will live in the many beautiful epitaphs written in monuments of deed—

Which shall forever last in strength sublime

Usakaken through the storms of time.

Of all these, none yet excel in depth of sentiment, in power of expression, and in sublimity of thought to the eulogy pronunced by Mr. Blaze, who knew whereof he wrote from long companionship and close familiarity. "The dox possesses, says he, "incontestably all the qualities of a sensible man, and of the dog. We make a virtue of gratitude which is hodding but a duty; this wirtue, this duty, is inderent in the dog. We brand linguitude, and yet all men are ungrateful. It is a vice which commences in the eradic and grows with our growth, and together with sellishness, becomes almost always the word virtue, that which we diguify by this idea and admire as a rare thing—and very rare it is in truth—constitutes his normal state. Where will you find a man always grateful, never ungrateful, always affectionate, never selfish, pushing the abnegation of self to the timost limits of possibility, with each and the control of the timost limits of possibility, with each of the control of

known to all sportsmen of experience and observation; with quickened pulse and satisfied looks he eagerly catches every word of praise and appreciates the caresese bestowed upon him with all the pride of a victorious chieftain. The gallsn-try, too, of the canine family, especially in the relation which the sexes have to each other, is full of incident and sentiment. How often have we seen the dog divide his ration with the unknown female, that growls and shows his teeth upon the approach of another of the male persuasion. I have frequently seen the dog drop from his mouth the half masticated bit and yield it up with all the gallantry of a Frenchman to a female who stood wistfully eying him for a portion of the mouthful. To such an extent does he possess gratitude that it may be rightfully termed the leading principle of his master, he is ever after reconciled with true magnaninity to bear culfs and scoldings from the hand which has given him kindness and caresses. But of all the good qualities possessed by the dog none exceeds that enduring faith, which is the most beautiful and affecting of all his inner attributes. We have seen him retrieve the whip for his master to be used for the purpose of flagellation, and looking into his master's face with all the deep trusting faith that grows out of forgiveness, show his confidence by licking the hand uplifted to strike.

One other noble attribute, which should raise him far up in the scale of companionship for man, is his entire emancipation from drunkenness. It is stated by the Rev. Thomas Jackson, in a work entitled "Our Dunb Companions," that a dog having once been made so drunk with nat! liquor that he was unable to walk upstairs, ever after positively refused to take the intoxicating daught. The barking of the dog is an acquired, hereditary instinct, for, says Princhard, "it has become natural to domesticated dogs and young whelps to learn to bark, even when separated at birth from their parents. If has been conjectured that barking originated in an attempt to

he attaches himself to anyone, all his actions indicate that the relation is one which has a foundation in the affections of the animal and does not vary with the degree of benefits conferred.

"The dog that shares the lot of the poor and miserable is no less faithful than another who enjoys all that can gratify the senses. The peasant boy who rears up his little favorite in his cabin of mud, and shares with him its seanty crust, has a friend as true as he who has ease and abundance to bestow. Release the dog from the cord of the blind beggar who wanders from door to door to beg a seanty subsistence, which he divides with his faithful companion, and will he follow you a step for all the edibles with which you can tempt his whetted appetite? Conline him in your mansion, and feed him with the waste of plenteous repasts, and let his forlorn master approach your door, to crave a scrap of food or ask a slender pittance of money, end his dog will fly to him with iddelity unshaken, and bound with joy to be permitted once more to share his miserable lot. Again and again has the dog of the humblest and poorest remained faithful to the last, and haid himself down to die on the grave of his earliest friend and benefactor."

Having thus cursorily pointed out those innate and really elevated characteristics of the dog that distinguish him preminently above all others of the brute creation as the companion and friend of man, there yet remains the classification of the various types of canineship that are and have been known since his earliest history, known as the sporting or field dog. From these various strains I shall attempt to point out the peculiar and distinguishing type of the spaniel, and secure, if possible, a fixed place for the active, intelligent and companionable cocker. I shall leave the other strains, their pedigrees and lineage, to the care of those who are more conversant with their history, culture and other qualities and attributes, have learned not only to admire their usefulness, but have so shaped and

sions and what is accomplished thereby.

It is generally admitted that for all the ordinary purposes of the sportsman the setter is the size qua non of hunting dogs, except perhaps for thick and impenetrable coverts and retrieving. This admitted, I can see no wisdom in the plan of breeding the larger type of field spaniels, except for the purposes of finding and retrieving dead or wounded game. The smaller, therefore, the spaniel is bred, for such uses as the setter cannot be employed, the better I judge is his adaptation to the work required of him. I think here is the true secret for breeders in perfecting the type of the cocker, and to make him a valuable aid for the sportsman in such conditions when the setter cannot profitably be employed.

[TO BE CONTINUED,]

Vennon's "Bulletiu" for June is ready and is noticed in another column. It is a spicy number and should be in the hands of every sportsman and traveler. In it the weather is outlined up to the close of 1883. This is a special edition, on pink paper (ten cents),— Adv_i

THE BIZMARK SETTER.

THE BIZMARK SETTER.

Editor Forest and Stream;
I have just read "Homo's" article, in your issue of the 4th instant, on Brooks's Bizmark. I have been interested in all the articles that ever appeared in Foiest and Stream of Brooks's Bizmark. I have been interested in all the articles that ever appeared in Foiest and Stream or Brooks's Bizmark. I have been interested in all the articles that ever appeared in Foiest and Stream or broth the dog and bitch referred to all the time they were bred together. Both of said dogs were imported. Bruch was born in mid-ocean between Liverpool and New York. I have hunted some forty years in England and this country, and I never did, nor do I ever expect to, see his like again.

Bruce was a large, powerful dog, and never seemed to get tired. When we commenced hunting him each chicken season he would at once settle down to business as though he had been hunted every day; would huns from the word go six days in the week, and when he started he seemed to say: "Lay on Machuff, and damned be he that first cries enough." He was in form, etc., as "Homo" describes Bizmark. He had a large, powerful head, a splendid nose, was broad and deep chested, and large boned. His cost was short and rather coarse, very little feathered. Hair on ears short but soft and fine as silk. He was a fine ranger and of medium speed. Hunted with his head well up and as staunch as a rock. It was a common saying with the boys that when Bruce found when done you would find Bruce with the birds. He hunted by whistle and motion of the hand. You could whistle and notion "down clarge," etc., and he would obey instantly, until again motioned to go on. He was an A No. I retriever; never mouthed his birds; and I never could decide, nor can I yet, on which kinds of game—chickens, quall, snipe, rail or waterfowl—he was the best at. In fact, he was as near perfection as a dog possibly can be. He was well known all over this city and the surrounding country, and was the pet of all who knew him. His pups, without exception,

of the old block.

Some time between '65 and '68 two young men were here from Philadelphia for a few days, hunting chickens; and if my memory serves me right one's name was Brooks, and if this is the same Brooks I should be pleased to correspond with him about those two grand old dogs. Well, these young men each brought a crack dog with them, one a setter, the other a pointer. One of these dogs was "the best hunter in the world, of the best blood, cost a large price," etc., etc. When a man came here to hunt who had "the best dog," etc., our boys always managed to pair me and Bruce off with the man and his crack dog. So, in this case, Bruce was paired off with this crack dog, and started on the prairie. In a very short time the crack dog was tied up to the wagon. Bruce was good enough for us both after that. They tried to buy him of me; dared me to fix a price; but Bruce was never for sale.

of the dated at Sale.

But to tell of his hunting lore, his peculiarities, etc., would take up more room than you would wish to publish in your paper, for I never yet saw the man or dog who seemed to understand the business as well as Bruce.

If any person will address me I will, if desired, give all the information about the dog and bitch I have.

I. N. WHITTAM,

THE PRAIRIE CHICKEN TRIALS.

THE PRAIRIE CHICKEN TRIALS.

THE chicken trials under the auspices of the N. A. K. C. will be held near Pairmont, Mion, commencing on Monday, Sept. 4. There will be two events. The Derby, open to all setters and pointers whelped on or after March 1, 1881, for a purse of \$401; \$200 to first, \$125 to second, \$75 to third, and \$50 to fourth. Entries will close July 1, with \$5 forfeit and \$10 additional to fill. The All Aged, for a purse of \$500, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, \$10 to fill. The All Aged, for a purse of \$500, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, with \$250 to first, \$125 to second, \$75 to third, and \$50 to fourth, with \$250 to first, \$125 to second, \$75 to third, and \$75 to whom all entries hould be addressed.

There is a widespread interest manifested by sportsmen from all parts of the country in these trials, and we have the assurance that many of the well-known Eastern cracks will be there, and the air is laden with mysterious whispers of wonderful surprises in store for the knowing ones when the "dark horses" are cut loose. Eatries for the Derby are already coming, in, and, judging from the inquiries for blanks, there will be a large number. Chickens are reported very pleuty in the vicinity, and we have the assurance of the gentlemen interested that the grounds will be strictly preserved. Fairmont is on the Southern Minnesota Radroad and easily accessible. The hotel and livery accommodations will be found sufficient, and without doubt the meeting will equal, if not surpass, anything of the kind that has been held in the country. Below will be found the entries received to date.

Columbia, T

country. Below will be found the entries received to date.

COLUMBIA, Tonn., May 25, 1882.

Editor Forest and Stream:

The following entries have been made in the American Field Derby on chickens, Sept. 4, 1882.

1. R. B. Morgan enters Frairie Wonder, Prairie Joe-Prairie Queen, Weleped April 23, 1881.

2. Sportsmen's kennel enters Prairie Molly, Prairie Joe-Prairie Queen, whelped April 2, 1881.

3. D. C. Sanborn enters Gus Bondhu, Dashing Bondhu-Novel, whelped May 11, 1881.

4. Same owner enters Blaze, Count Noble-Spark, whelped July, 1881.

5. Same owner enters Countess Magnet, Count Noble-Spark, whelped July, 1881.

6. D. McKinney Lloyd enters Count Dad, Count Noble-Nellic, whelped July, 1881.

7. J. A. Titcomb enters Old Walt, Lincoln-Daisy Dean, whelped April, 1881.

8. J. H. Dew enters American Dan, Lincoln-Daisy Dean, whelped April, 1881.

FLIRT,—Milton, Mass., May 20.—Editor Forest and Stream:
In the Porrest and Streem of May 18 your report of the
Boston dog show states that Flirt, I wish setter bitch, who was
awarded first prize in the open class for bitches, is not the
type that should win. Allow me to state that Flirt, when in
very poor condition, distemper coming on, was awarded a
prize at the Kennel Club show, bublin, Ireland, H. D. Jephson, a member of the Irish K. C., being the judge. According
to the Irish idea of an Irish setter, I was told by several Irish
gentlemen breeders that Flirt, barring her stern, was nearly
a perfect specimen of the Irish setter; and, moreover, I was
offered by several of them a handsome price for her. An
other dog near the ground, "as your correspondent calls
them," awarded a prize at the Boston show, was Berkley,
and, by the way, your correspondent praises him. It makes
very little difference what may be written or said about my
bitch after Mr. Jephson's, Dr. Niven's and the London Field
correspondent's opinion of her. The Field said "a grand
bitch, and likely to grow into something out of the compon."
I would suggest that in future, before you print in your paper
such a sweeping assertion as that a dog is not of the type that
should win, you should be sure that your reporter is well up
in what he is writing about.—ALEER MikeEDITH.—(Our correspondent begs the question. We have no doubt that Flirt,
"When in very poor condition," would come much nearer the
type of an Irish setter than she did at Boston. We wrote of
her as we saw her, and after a very curreful examination, and
believe that in the form in which she was shown she was not
a typical representative of the breed, I

MR. E. E. HARDY'S "ROLL,"

ROLL.

OUR illustration this week is of Mr. E. C. Hardy's liver and white English setter dog Roll, winner of third at both New York and Boston this year. Roll is a fine upstanding dog food size, by Dash III. out of Countess Ada. He is a capital fielder, and will run in the chicken trials next fall, and probably in both the National and Eastern Trials. He was trained by Mr. N. Nesbitt, of Storm Lake, fowa, who will handle him the coming season. The cut is from a sketch by Harry Tallman. probable trained handle Harry Tallman.

SOUTER JOHNNY'S DEATH.

SOUTER JOHNNY'S DEATH.

[From the Jacksonport, Mo., "Cash Book," May, 1882.]

A T his home in Jackson, on Saturday, May 13, 1882, of poison, dealt by some unknown person, died Souter John, a dog. In his death a young Rodman I rish setter of the finest blood and fairest promise has been tarken off. It would have been hard to thid anywhere a dog to match Souter John before the gun. His sight, his nose and his hearing were perfector; his action superb and his endurance wonderful. For these qualities, together with his obedience and segnety, his beauty of form and graceful movement, his master, Mr. Thos. McFarland, prized him as a jewel, and besides he was admired and carcesed by every sportsman who knew him. Souter John was whelped at Edgar, Nebraska, May 22, 1880, and was brought to Jackson when seven months old. He leaves behind him his brother Tam O'Shanter and his agod father Shidy to mourn his until med and his high of the summer of summer of the summe

Come, doggles all baith old an' nimble, Wha hunt the patrick in the bramble, Or cotton-tail, An' ilka puppy quit his gambol To weep an' wail.

Let ilka tail now drag the ground,

An' ilka doggie stand around Where Johnny's dead, An' how! an' how! wi' mournfu' sound Aboon his head.

All we who like the fields to scour All ye wan ake the fields to scour
Wi'gun an' dog for mony an hour
In chill October,
When frosts hac nipp'd the weed an' flow'r, Come an' look sober.

For John, the prince o' every Setter, Lies stiff an' cold down in the gutter, To hunt na mair:

Than him na kennel kept a better Onywhere.

Ah! Tam, your brother Souter John, Maybe you think's a hunting gone

Just for to-day; But, Tam, the trail puir Johnny's on Leads far away.

Vile wretch who dealt the poison! surely He canna go to Hell too early;
For him sac mean
Old Hornie's fires are blazing clearly, An' pretty keen.

Ye Fates wha fill the hazy breezes Wi' foul contagion an' diseases
To pester man,
An' lika ake an' cramp that squeezes,

Do all ye can,

To mix your ills in hellish jumble, An' mak' a curse an' let it tumble Upon his pate. Lord, hear this prayer, sincere an' humble, An' grant it straight.

Robin

Robb.

THE NEW YORK 'HERALD' says: "Mr. S. T. Hammond has chosen a very appropriate title for the series of ten chapters on 'Training vs. Breaking' dogs for field purposes. These originally appeared in Forbers and Stream and were so well received that their author has issued them in book form, together with several sporting sketches which have appeared over his signature of 'Shadow.' The author makes no attempt to fly at high game in his style of inculcating the principle he evidently so thoroughly believes in. The strong point he begins with and carries through to the end of his pupil's education is that the staviter in mode accomplishes more than the fortifier in re. At the same time he admirs that some dogs are not amenable to his system, but it will be very generally conceded that an animal that will do nothing except he is compelled by force and punishment is not only a rexation to the breaker, but that his time could be much

better employed in educating a dog that was capable and willing to learn. As a practical guide to the method of training without punishment Mr. Hammond's book is all that could be desired, and will doubtless be the means of 'man's best friend' being better treated than he has hitherto."

THE ENGLISH NATIONAL FIELD TRIALS.

best friend' being better treated than he has hitherto."

THE ENGLISH NATIONAL FIELD TRIALS.

THE special report of these trials, for which we had art ranged, not having come to hand, we give herewith a summary of the awards, taken from the Live Stock Journal. This important meeting commenced on April 26, under the presidency of Mr. A. F. Heywood Lonsdale. His Screne Highness Prince Albert Sohns, Bramfels, Prussia, was competitor. Birds were plentiful, and there was abundance of "lie," and nothing occurred to mar the proceedings. The first item in the programme was the Pointer Puppy Stakes for puppies born in 1881; stakes, 25 5s. each; 1st prize, 230 and £10 added; 24, 24; 3d, 240. There were 14 entries, and the result of the day's work was that the first prize was awarded to Mr. F. C. Lowe's Lemon and white Bang Bang, by Champion Bang-Princess Kate; 2d, Mr. Barclay Field's liver and white Young Dick, by Dick Fame; 3d, Mr. R. G. Mawson's liver and white-ticked Syke, by Drake-Blanche.

On Thursday the first event was a purse, value £20, to be run for by the winners of the Pointer and Setter Puppy Stakes. The pointer won, Mr. F. C. Lowe's Bang Bang, 15 months, beating Mr. C. J. Cote's Dick.

The Braces' Stakes, or Cloverly Stakes, for dogs and bitches (pointers and setters), all ages, followed. The winning braces received £30, and the second best £20; the absolute winning brace of oither breed had £10 added. Following were the braces entered:

POINTERS.—Viscount Bounce, by Bang H.-Biance II., and Jane, by Old Mars-3lit. Mr. R. T. Lovd Price's Little Ben, by Ben-Belle, and Tick Louse, by Drake-Nimble Ninepence. Mr. A. P. Heywood-Lonsdale's Dainty, by Pust-Bess, and Cassandra, by Birr-Fan. Mr. George Pilkington's Laurel, by Bang-Jessamine, and Moffat, by Bow-Greina. Mr. Barclay Field's Bicu, by Drake-Romp, and Sall, by Riot-Reine.

SETTERS.—Hr. A. P. Heywood-Lonsdale's Dainty, by Bannet-Fan. Mr. Barclay Field's Beau of the Ball by Bas ml-Silk. Mr. R. Li. Purcell Llewellin's Dashing Bondhu, by Dash II.-Silk, and San

mond II. and Sam II. taking the prize.

EASTERN FIELD TRIALS.—A meeting of the board of governors of the Eastern Field Trials Club was held at Delnonico's on Thursday evening, 25th ult., at 8:30 P. M. The report of the committee for selection of grounds and date of trials (as published in our issue of May 20) was accepted. Messrs, Donner, Goodsell and Greene, were appointed as a studing committee for the selection of permanent grounds for the future trials of the club. They are to report at the next meeting of the board, which will be held on Thursday, Oct. 12, to which date the meeting was adjourned. They will be pleased to receive communications from members, or from any others who may know of suitable grounds.

THE CLEVELAND BENCH SHOW .- The managers of the Cleveland Bench Show Association have been fortunate in securing the services of so good judges as Mr. B. F. Wilson, of Pittsburg, Fa., for English setters, and Mr. H. Malcom, of Battimore, for the black and tan setters and pointers Mr. J. K. Kirk, of Toronto, Can., will judge the spaniels and non-

DOG STOLEN.—Mr. H. F. Schellhass, of Brooklyn, informs us that his greyhound dog was stolen on the 22d. He is fawn-colored, with white breast, and has a scar on right fore shoulder. Any information as to his whereabouts will be thankfully received, and a liberal reward will be paid for the conviction of the thief.

EASTERN FIELD TRIALS CLUB.—Field trials on quail at High Point, N. C., November 17. Entries for the Derby close July 1; for the All-Aged and Members' Stakes November 1. F. N. Hall, secretary, P. O. Box 884, New York.

WESTERN PENNSYLVANIA Poultry Society's Bench Show Derby, Pittsburgh, Pa., for English setters whelped on or after March 1, 1882. Entries close December 1, 1882. I. R. Stayton, secretary, Allegheny City, Pa.

THE GREYHOUNDS.—Chicago, May 27.—Editor Forest and Elvam; I note the communication in issue of May 25, and in reply will say that I do not wish to do Mr. Dawson any injustice. I cheerfully accept his offer to have the dogs

judged by competent judges. I cannot go to London, Ont. Can he not send McGrath to Cleveland, where Doubleshot is entered, and let them be judged privately? Or, if I can arrange with some one in London, Ont., to send my dog to, by express, after the Cleveland show, who would receive him, take care of him and return him, I should be glad to do that, and ask Dr. Nivens to represent me and be one of the judges.—L. C. F. Lorz.

KENNEL MANAGEMENT.

L. V. D., Littleton, N. H.—The symptoms you mention indicate the loss of the pups, although it is not a foregone conclusion. Give her a tablespoonful of cod liver oil twice a day, and omit the aloes. Write result

resulf.

F. W. G., Hartford, Conn.—My dog, a very small black and tan terrier, two years old, has a good appetite, but grows poor, and his eyes run a thick substance and have to be washed quite often; his breath also smells very bad, and he is quite costive. Ans. Keep the eyes clear from discharge, using a wash containing 5grs, borax to ounce of water. Keep the bowles open and regular with an occasional dose of syrup of buckthorn, a teaspoonful more or less as required.

F. R. G. Toutet, Mule, a gradle beauth little beauth of the content of

eyes clear from discharge, using a wash containing 5grs. borax to ounce of water. Keep the bowels open and regular with an occasional dose of syrup of buckthorn, a teaspoonful more or less as required.

F. B. G., Detroit, Mich.—A small hound bitch six months old has a lump on her lower jaw about the size of a hickory nut, apparently use clargement of the bone. On her neek, in close proximity to this lump, is a sore which discharges a little at times. There is a slight swelling under the skin beneath this sore. I noticed these for the first time about two weeks ago. Her general health is good. Ans. Show the bitch to your family doctor; the lump is evidently an enlarged gland due to the continuous sore, and should disappear when the sore is healed, which it will probably doc! Kept clean.

CLAREXCE, Hartford, Coun.—My pointer has dry scabs on his legs and head; has just had the distemper; scems lively, but shakes his trouble with him? Ans. Rather of the distemper. What is the shaking of his head indicates trouble in his care. Excepts the carefully, and if you find no foreign substance, we should be inclined to think that he has canker. Should this be the case, take of brome chloraltum and laudanum equal parts, and dilute with six times their bulk of water; fill the ear and gently kneat the base a short time once a day. Two or three applications will effect a cure.

F. S. F., Lynn, Mass.—I have a young Newfoundland just eleven weeks old. His left ear for the last week has been discharging all the time, and he is constantly shaking his head. A week ago his left eye commenced to run, and now both are running, with a light cough. He has no life, and wants to lie in the sun all day. He is well bred, and think will make a large dog, and of course I should like to raise time, and he is constantly shaking his head. A week ago his left eye commenced to run, and now both are running, with a light cough. He has no life, and wants to lie in the sun all day. He is well bred, and think will make a large dog, and of course I sho

exercise.

H. J. F., Oak Hill, Florida.—A setter dog is afflicted with what the residents of this section of the globe call the "stagrens." The animal starts to walk, he seems to lose entire control of this legar, and almost fall. Coat healthy, nose moist and cool, eye bright and free from any inflammation, appetite good, Ans. Consult the issue of this paper for October 23, 1879, article entitled "Chorea." Have seen good results from 1-23 grain strychnine given three times a day, giving less if this causes the dog to "stiffen out;" i. e., have a sort of spasm, increasing gradually until 1-16 grain can be taken at a dose, the idea being to keep just short of the dose which causes this spasm or stiffening of the nurseles.

paper for October 23, 1870, árcibele entitled "Chorea." Have seen good paper for October 24, 1870, árcibele entitled "Chorea." Have seen good in this comparation of the control of the co

Rifle and Trap Shooting.

CREEDMOOR JUNE PROGRAMME.

SATURDAY, JUNE 3.

Saturday, June 3.

This tempetition, the Educational match. To be shot June 3 and 11, and July 8 and 22, 1832.

This match is open to everybody, but particularly to beginners coached by veteran ridement, the object of the originator of the match and of the N. R. A., being to encourage and educate young ridemen. To the young beginners—You are cortially invited and urged to the state of the N. R. A., being to encourage and educate young ridemen. To the young beginners—You are cortially invited and urged to to act as your "coach" in this match.

Any ride; military weapons to receive an allowance of one point on each five shorts fired. The members of one team may use the same rife. Entries (for the team) 31 each. Re-entries permitted. The three highest scores of each team, made on any day or days of the competitions, to be added together and counted as one score in determining winners of prizes.

N. K. A. end of any day of the competition, to be added together and counted as one score in determining winners of prizes.

N. K. A. and over presented by Gen, Edward L. Molineur, president N. K. A. and over the score of ment respectively. Total, 25 prizes; aggregate cash and value, \$185.

Also same day, June 3 first competition, first stage, June Interna-

of merit respectively. Total, 25 prizes; aggregate cash and value, \$135.
Also sum day, June 3, first competition, first stage, June International Military Practice Match. Arranged to furnish practice to those desiring to compute for places upon the American Team to shoot against the British Volunteers in the International Military Match to be shot during the second week in September, 1882, though any person may enter and shoot without competing for a place upon the team.

Open to everybody. Distances (this day, first stage), 200, 500 and

on may enter and shoot without competing for a place upon the team.

Open to everybody. Distances (this day, first stage), 290, 590 and 509 yards, seven shots at each distance. Standing at 200, prone (i. e., lying "head toward the target") or sitting at 500 and 600 yards. Any military breech loading rifle. Cleaning of rifles not allowed, excepting between distances.

Members of the National Guard entering this match will not be required to appear in uniform. Entrance fee for each stage, upon each day shot, Simple of the short of the short of the entry of the short of the

medal.
Note.—It has been incorrectly stated that none but native-born citizens are eligible on the team; the terms of the match do not discriminate against adopted citizens, provided they were enrolled in the National Guard on or before September 1, 1881.
Wednesday, June 7.
Second competition, first stage, June International Military Practice Match. Conditions as on Saturday, 34.

Medites A. June 7.

Second competition, first stage, June International Military Practice Match. Conditions as on Saturday, 34.

First competition at 11 A. M. June Off-hand Match. Open to everybody. 20) yards. Seven shots each entry. Entries unlimited, but only the three highest (made on any or all days of the competitions) added together to count. Fifty cents each. Any ritle; military s, pulling 6 lbs., to receive four points on aggregate of three Competitions prizes to be awarded on last day of the competitions in order of merit, value 575.

Third competition, the Duryoa Skirmishers' Match.—Open to all comers. Rifle, any except repeaters. Distances, 500 to 200yds. Shots not to exceed 20. Competitors assemble at 500yds, in squads opposite their respective targets. At the command of the officer the competition, thats and loads. At the signal he together with the rest of the sumes any position, fires, and conditines loading and firing in his discretion until the signal "Forward," which will be sounded twenty seconds after the signal "Halt," when he again advances in quick time. When the competitors arrive at about 200yds, the hits on each target are signaled by the markers, after which "in retreat" is sounded, when they face about and return, firing as before (carrying helir rifles on the right shoulder). Five halts are made in advancing about a signal of the signal from a competitor's arrive at a state 500ys, think or light of the arriving at the 500ys, firing point the firing ceases, and the remaining hits on each target are signaled. Five points will be deducted from a competitor's score:

1. For each shot fred after the signal "Forward."

2. For each shot fred after the signal "Forward."

3. For each shot fred after the signal "Forward."

3. For each shot fred after the signal "Forward."

3. For each shot fred after the signal "Forward."

3. For each shot fred after the signal "Forward."

3. For each shot fred after the signal "Forward."

THAT LAST BADGE SHOOT.

THAT LAST BADGE SHOUT.

SELING in your issue of May 18 the score of the South Abington by Sportsman's Club, and knowing that the details of the shoot would be of interest to the readers of Forest AND STREAM, I will endeavor to give as correct a report of the affair as possible under the circumstances. The contest was to come off precisely at 1.39 P. M., and promptly at 8 P. M. the first man, David H., put in an appearance, and was hailed with cheers from the vast crowd assembled, viz.; two men and a small boy. He was followed by a promiscuous crowd, bearing guns, ammunition, boxes, etc. After some delay in choosing judges, etc., the Holden trap was putout and the trouble begun.

viz.: two men and a small boy. He was followed by a promiscuous crowd, bearing guns, ammunition, boxes, etc. After some delay in choosing judges, etc., the Holden trap was put out and the trouble begun.

The first man called was Matt Lincoh, and as he took his place at the score, followed by his celebrated beagles Corkscrew and Gimlet, the score, followed by his celebrated beagles Corkscrew and Gimlet, and the score followed by his celebrated beagles Corkscrew and Gimlet, so the score of the sc

PISTOL AMMUNITION.

Editor Forest and Stream:

I have been very much interested lately in your articles anent pistol shouling. In common with many others, I enjoy it very much as a shouling. In common with many others, I enjoy it very much as a shouling. In common with many others, I enjoy it very much as a shouling. In common with many others, I enjoy it very much as a few principles of the unpleasant recoil attending the use of factory-loaded cartridges, and consequently the desirability of ammunition containgless powder. I use a Smith & Wesson, 38-calibre, self-cocker, and when properly loaded and handled it certainly is not excelled in accuracy.

The cartridges as sent out by the manufacturers contain at least two grains powder where there should be but one, or too much by one half. The shells being centre fire. I have been loading them myself the aim is much more pleasant and satisfactory. I have, however, had one serious difficulty to contend with; the moulds furnished by the firm as part of the reloading outfit, cast a built so large as to require considerable force to drive it through the loader, and hence upsetting it to such a degree that when loaded the cartridge will not chamber. Several of my acquaintances here have experienced the same difficulty. I forwarded an order to S. & W. for a supply of their swaged builets, and had they are nearly 1-10 inch less in diameter, and drop distinctly through the loader, and they up to force as would feeling sure as I do that others besides us here who use Smith & Wesson can tell the same story. It has been suggested that the object in thus making the moulds large is to compel us to buy the manufactured cartridges. I have corresponded with Messrs. S. & W., and singularly enough they very stubbornly maintained that the wind standard their moulds, only to receive others of the same callbre, which they cannot use.

Viralliaver, Mc., May 16, 1882.

PENNSYLVANIA.

THE Adjutant-General of the State has recognized the international match in the following circular. It is probable that a number of Pennsylvania ridemen will present themselves at the competition for places in August next:

HEADQUARTERS NATIONAL GUARD OF PENNSYLVANIA, ADDITANT-GENERAL'S OFFICE,

GENERAL ORDERS NO. 6.

The attention of the Guard is called to the International Rifle Match, to be shot at Creedmoor, Long Island range, during the coming United States and the volunteer forces of Great Britain.

A circular of the National Rifle Association of America, dated March 16, 1882, which has been generally published, fully describes the particulars and conditions of the match. Those, however, not amiliar with its terms will be furnished with the requisite information upon application to the Adjutant-General's office.

It is not in ended to organize any competitions in this State under official direction, but those from Penns Ivania who may be successful in securing places upon the American team will each be presented with a suitable trophy, to be selected by the State Military Board.

NEW YORK STATE	E SHOOT	June	12 has	been d	ecided :	inon e

NEW YORK STATE SHOOT.—June 12 has been decided upon as the day for the opening of the New York State shoot, which will last through the week. A very large supply of pigeons has been obtained, and special arrangements have been made to insure the pleasure of attending delegates and the success of the tournament. The Niagara Falls Cith, under whose management the shoot is held this year, have, we understand, secured special railroad, hotel and hele fares for members of the association. A very large attendance is Mr. Wm. Pool, Niagara Falls.

	hack fares for members of the association. A very large attendance
	of combatants and spectators is anticipated. The secretary's address
	is Mr. Wm. Pool, Niagara Falls.
	BOSTON, May 27,-A fair attendance of riflemen was present at
	Walnut Hill to-day, and although the weather conditions were not as
	favorable as could be desired some good scores were made. The shoot-
	ing opened with the following result:

Answers to Correspondents.

C, G. L.—"Highholds" are protected by law in New York State C. R., Pailadelphia,—Please inform me if mackerel have Ans. No.

A. B., Boston, Mass.—Would advise you to procure a St. Bernard. We know of no pupples for sale.

JERISEY CITY.—What is the date of the open season for black bass in New Jersey? Ans. The 1st of June.

R. K., New York.—What kind of fishing is there in Schroon Lake? P. V. S., New York.—We should advise you to go to the agents of the first gun mentioned, and examine the styles and prices.

the first gun mentioned, and examine the styles and prices.

J. C., Jr., Denver, Col.—For English blue-rock pigeons for breeding purposes apply to Chas. Reiche & Bro., Chatham street, New York.

F. G. B., Hoboken, N. J.—Cun you inform me if there is any brook trout fishing on Staten Island open to the public? Ans. There is none.

one.

O. C., Riverside, Cal.—1. The rifles are generally considered safe.

For pictures of hunting and fishing send to Currier & Ives, Nassautreet, New York.

O. C., Riverside, Cal.—1. The rifles are generally consucred same. 2. For pictures of hunting and fishing send to Currier & Ives, Nassau street, New York.

F. W. H.—See article on "Cheap Trip to Adirondacks," in our last Issue. Consult, also, "Wallace's Guide Book," which we can send you. Price, fifty cents.

C. H. L., Newport, N. Y.—1. We can supply Manton's "Taxiderus Without a Teacher," price 50 cents. 2. The scientific name of the highhold is Colaptes awards.

highhold is Colaptes awatus.
Q., Opelika, Ala.—The guns are bored both full, and modified choice.
You can get what you want, we presume, by giving instructions to
the dealer from whom you purchase.
G. L. B., Middleboro, Mass.—Can you inform me who owns the red
Irish setter bitch Kath, who won second prize at Pitisburg in 1879? I
wish her pedigree. Will some one send us the information?

F. P.—The member of your gun club who reached the grounds after the match had been decided had no claim to compete for the prize. It should have been awarded to the man who won the shoot-off.

G. L., Phelps, N. Y.—There is being sold upon our streets black bass. What could we do about it? Ans. You can complain and prosecute, the same as in case of any other offense against the laws of New York.

prosecute, the same as in case of any other offense against the laws of New York.

A. H. S., Catawissa, Pa.—What are the proper dimensions for kennel for a melium-sized setter? Ans. The larger and more roomy the better. If you are seant of room, three by three and one-half feet and thirty inches high will do very well.

G. M. C., St. Genevieve, Mo.—We do not know that the land has been explored. Would advise you to write to the Florida Commissioners of Agriculture, at Jacksonville. Althorp's map of Florida is a good one Sold by Drew, stationer, in Jacksonville.

A. B. D., New York.—Good sheep-rai-ing sections are in Nebraska, Southern Kansass and Missouri. For books on the subject write to the National Wool Growers' Association, Boston, Mass. The Nebraska Farmer, published-at Lincoln, Neb., has a department devoted to sheep rai-ing.

*GLINDALE, Mass.—It is not against the law to work your dogs on young woodcock, not shooting at nor attempting to kill the game. But we should not advise you to do it. It is not good for the dog, because the secret of the young brid sidferent from what it will be when they are mature.—Please inform me whether the rock-fish.

Vennon's June Bulletin.—Mr. Vennor offers the public a special "Builetia" for June, in which he attempts a forecast of the general characters of the seasons for the next nineteen months. Singularly councy, his "long-range" predictions have in the past been remarkably councy, his "long-range" predictions have in the past been remarkably winter and autumn of 1833. Besides this "naneteen month" prediction, details are given for June and August weather, and the summer generally. An interesting chart of the comparative temperatures of a number of stations between Fort Garry, Man., and St. John, N. B., is given in black and white, and some singular facts are mentioned respecting "weather relationships," which Mr. Vennor claims to have discovered. Another cut represents the techerg inhabited by polar feet of the properties of the properties of the polar council sea, and the section for the properties issue. St. will be sent directly to all applicants for ten cents, and subscribers for the rest of the year for infer cents. Address, simply, Henry G. Vennor, Montreal, Canada. No more papers can be sent for a stamp.—Adv.

PUBLISHER'S DEPARTMENT.

MESSES. WRIGHT & DITSON, the well-known manufacturers a dealers in fishing tackle, camping outlits, etc., have a fine illustra-catalogue, giving a full discription of their goods, which they will pleased to mail on application. See their advertisement.

CENTERBOARDS FOR CANOES.

CENTERBOARDS FOR CANCEL.

Battis a first-class centerboard shown in your issue of May 4. In looking, and the class centerboard shown in your issue of May 4. In looking, and the construction, would the lifting-rod 0 J not straighten out when lead is being lifted out? V H looks as if it would stand better, being set at a better angle.

Would charcoal-iron rivets not have done as well as copper ones, and so have saved Mr. R. T. mental anxiety as to galvanic action? One little point looks as if it wanted explanation: When the board is lowered, what position does the part F P take? P looks as if it were fixed so as to allow point F to fall aft. Should F P not be hinged just at letter R, or, to explain better what I mean, should it not be constructed as sketch herewith inclosed? What does Mr. Tyson mr. When.

Hingepin to allow lead to come out in line vertical with rod R. Pin on which centerboard hinges.

Pin through keel supporting board.
Rod to lift board up through sl.t in deck

PEARLS.

PEARLS.

WHILE canoes representing a compromise between sailing and paddling have received much attention throughout the country, it has been left to New York to incroduce the heavy dragoons in the way of lead laden canoes adopted mainly for sailing and for regular windward work. With the great experience of our English cousins to draw upon, it was natural as well as sensible that the Pearl of Mr. and the sail of the sail

tiller for hand steering besides the usual foot gear. According to the new rules of the American Canoe Association now proposed for adoption, the Pearls would fall under Class 4, as "paddieanle sailing canoes." Length not over 18ft. with a maximum of xim. beam for that length. The beam may be increased 136in, for every 100 to length less than 28ft., showing that the A. C. A. is alive to the importance of size in classifying boats, regardless of hadr length. This beam along the size in classifying boats, regardless of shell length to be initially a much less intelligent comprehension of the subject of ineasurement. Depth, underside of deck to misde of garboard at forward end of wol not to exceed 16in. Keel, outside, limited to 2in. depth. Centerboards limited in size to 18in. drop pelow keel and in weight to 60bs. There is, however, no limit to total weight or ballast in class 4. As may be supposed, balancing beam against length will be productive of highly interesting and valuable experiments. In the subject of the control of

THE SWEEP OF REFORM.

That the bouleversement in faith from light drafts to deep and modgathered from with outside ballast is sweeping all before it may be gathered from the following quotations from a recent issue of the Herdd. The opinions therein given accord so closely with all forest AND STREAM has been seeking to impress upon the public mind, that we derive much consolation and pleasure to note the growing prevalence of the ideas and principles set forth in these columns. The Herdd says:

"Of the new ideas that have gained a recent

As Serman has been seeking to impress upon the public mind, that we derive much consolation and pleasure to note the growing prevalence of the ideas and principles sot forth in these columns. The Herald say:

"Of the new ideas that have gained a permanent foothold and been extensively put to practical use is the use of lead. A few years ago yachtsmen would have laughed at such ballast, but ridicule has been supplanted by words of commendation, and those who most strenu."

Many yachtsmen have taken out their iron ballast and put lead in place of it, while outside lead has been and is being put on large and small boats. And the new departure in outside ballast will work a revolution in the matter of models, as it will soon be ascertained that less beam must be needed to carry the same amount of sail. Accepting this, another step will be taken and the aid of the designer invoked, as the lead must be properly placed or the yacht will fail to prove the properly bear of the yacht will fail to go soon the same that the properly placed or the yacht will fail to go soon the same that the properly placed or the yacht will fail to go soon the same that the properly placed or the yacht will fail to go soon the same time to the yacht will fail to go soon the same time to go soon be sacertained that less beam must be needed to carry the same amount of sail. Accepting this, another step will be taken and the aid of the designer invoked, as the lead must be properly placed or the yacht will fail to go soon the same time and the sail of the designer invoked, as the lead must be properly placed or the yacht will fail to go soon the sail to sail to sail the sail to the place. The first large yacht in this yichinty to take out her iron ballast and substitute lead was the schooner yacht as on the sail yacht will be taken to sail lead inside and utside, but in her case it was put on last season. The schooner yacht appearance will be looked forward to will much a since and plan. This, it is toped, will increase her speed and make her

"OLSEN'S."

"OLSEN'S."

So now we at last have our "Hunt" and our "Lloyd's Register" com bined in one very acceptable publication. We refer the reader to an advertisement of Neils Olsen's "New American Yacht List for 1882."

a book that we may housely take pride in, that has real merit, read book that we may housely take pride in, that has real merit, reads that the state of the

SAILING REGULATIONS OF THE AMERICAN CANOE ASSOCIATION.

R ULE 1.—Canoes to compete in the races of this associaton must come within the limits of one of the following classes, and must be sharp at both ends, with no counter, stern or transom, and must be capable of being efficiently paddled by one man.

Class I.—Paddling canoes:

Length not over 18t., beam not under \$\frac{2}{2}\text{lin}\$.

Birgle. \(\begin{align*} \begin{align*} A. \\ \begin{align*} \beg

(B. Birch bark and similar canoes, no limit.

Class 2.—Saliable—Paddling canoes;

Singlo.

Singlo.

Decked canoes. Length not over 15ft., beam not over 25in., keel as in Class 3.

B. Peterboro canoes (Note 2). Length not over 16ft., beam not less than 27in.

Double. Peterboro, not over 16ft. by 30in.

Class 3.—Saliing and paddling canoes:

Canoes in this class shall not exceed 18ft. in length, with a limit of seam for that length of 27 in., which beam may be increased in the proportion of 15fh. to every foot of length decreased. The greatest lepth at fore end of well, from under side of deck amidships to inner the control of the seam of the control of the co

ph.
Tr. 1.—Measurements. The length shall be taken between perliculars at fore side of stem and after side of stempost at deck,
bean at the widest part, not including heading.
Trig 2.—"Peterboro" canoes. This title includes the Canadian
sea built in the vicinity of Peterboro, Rice Lake, Herald, English,

canoes built in the vicinity of Peterboro, Rice Lake, Herald, English, Stephenson, etc.

Nore 3.—No limit has been fixed for double canoes in classes 3 and 4, but they, as well as larger canoes, will be classed as soon as they are present in sufficient numbers to make additional races.

In the present in sufficient numbers to make additional races. The control of the present in sufficient of the present of the fixed by the regard committed to a class on a time allowance to be fixed by the regard committed experience of the present, extra races may be added. (This rule is intended to give the regard committed effection in regard to boats not conforming exactly to the rules.)

Relie 2.—None but members of the American Canoe Association shall be permitted to enter its races; and no canoe shall enter that is not conformed to the association shall compute in any race or claim any prize while such arreers remain unpaid.

Relie 3.—All entries must be in writing on the blanks provided, and must be handed to the regard committee within such time as they direct.

direct.

RULM 4.—Every canoe entering, except for an upset race, shall carry a private signad, 10x15 inches, on a staff forward when paddling and at the peak of the mainsail when sailing; and no other lag shall be carried during a race.

RULE 5.—Plags of three patterns shall be given for first, second, and third prizes in these races, and no other prizes shall be given to the disording of the registration of the registration. No prize of money shall be given for first, second, at the discretion of the registra committee. No prize of money shall be given for the prize of the discretion of the registra committee. No prize of money shall be given for the prize of
at the discretion of the regatta committee. No prize of money shall be raced for.

Rule 6.—The mode of turning stakeboats, and all directions for each race, shall be posted by the regatta committee on a bulletin board one hour before the race is called; and, any competitor not knowing the course, or mistaking it, or not following those rules, does so at his own risk. Stakeboats and bnoys will be let on the port land, when not stated distinctly to the contrary.

Rule 7.—No pilotage or direction from any boat or from the shore multified. (See note.)

Rule 8.—Any cance fouling another shall be ruled out. It shall be considered a foul if, after the race has commenced, any competitor by his cance, paddle, or person, shall come in contact with the cance, paddle, or person, shall come in contact with the cance, the properties of the present of any other competitor, unless in the opinion of the judge such contact is so slight as not to influence the race. In order to claim the race. Every cance must stand by its own accidents.

order to claim the race. Every cance must stand by its own accidents.

RULE 9.—Should the owner of any cance duly entered for a race consider that he has fair ground for complaint against another cance, he must give notice of same before leaving his boat on the finish of the race to the judge, and must present the same in writing to the regatta committee within one hour of his arrival at the finish, if appealed from the decision of the judge.

The sum of one doller shall be deposited with each protest, to be forfeited to the association should the protest not be sustained. The regatta committee shall, after hearing such wridence as they may deem the stand by the shall be final; but if not unanimous, an appeal may be made to the executive committee, whose decision shall be final; No member of either committees shall take part in the decision of any question in which he is interested. In all cases where a protest is lodged on grounds of foul salling or paddling, evidences of actual contact shall be necessary to substantiate the protest. The regatta committee shall, without protest, disqualify any cance which, to their knowledge, has committeed a breach of the rules.

PADDLING RACES.

RULE 10.—Paddling races shall be started by the starter asking, "Are you ready?" On receiving no answer, he shall say, "Go." If he considers the start unfair, he may recall the boats, and any cance refusing to start again shall be distanced.

RULE 11.—A cance's own water is the straight course from the station assigned it at starting. Any cance leaving its own water shall do so at its peril at starting. Any cance leaving its own water shall do so at its peril at starting and the starting of the latter, which then becomes its own water, and it shall only leave it at its peril.

nen becomes its own water, and it shall only leave it at its per il.

SALLING BACES.

RULE 12.—The paddle shall not be used in sailing races, except for cering when no rudder is used, or when the rudder is disabled, for each strokes to beward in tacking, or for shoving off when aground, foul of anything, or in extreme danger, as from a passing steamer from a squall.

onch strokes to leeward in tacking, or for shoving off when aground, told of anything, or in extreme danger, as from a passing steamer of from a squall.

Rube 13.—Five minutes before the start a signal shall be given, and Rube 13.—Five minutes before the start a signal shall be given, and Rube 13.—Five minutes before the start a signal shall be given to shart kny cannoe which crosses to the course side of the starting line prior of the second signal must return above the line and recross it, keeping out of the way of all competing cances, using the paddle if necessary; but after the second signal the start shall be considered as made, and all cances on either side of the line shall be amenable to be sailing rule any position for starting, and prior to the second Cances may take any position for starting, and prior to the second cowell. Should circumstances require it, the regatla committee may vary the manner of starting.

RULE 14.—All shiftable ballists except centerboards shall be carried within the canoe, and no fixed ballast shall be carried below the keel shad. Bellast may be shifted, but no ballast shall be taken in or known out during a race.

In the shall have been considered to be a shall be taken in or known out during a race.

In the shall have been considered to be a shall be taken in or known out during a race.

In the shall be a shall be a shall be carried below the keel control of the shall be taken in or known out during a race.

In the shall be a shall be a shall be carried below the keel considered to the other of another, unless so much be course, if two canoes are not clear of each other when the leading canoe is close to and actually rounding the mark, the outside anone must give the other room to pass clear of it, whether is be the eor weather cance which is in danger of fouling the mark.

No canoe shall be considered clear of another, unless so much shead as to give free choice to the other on which slide she will pass, also the considered clear of another, unless so much shead as to give

An overtaking canoe shall not, however, be justified in attempting to establish an overlap, and thus force a passage between the leading canoe and the mark after the latter has altered her helm for rounding.

RTLE G-Canoes closechauled on the port lack shall gire way to those on the starboard tack. In the event of a collision being imministed in the starboard tack in the event of a collision being imministed the content of the port lack shall limber on the port tack shall never bear away. A canoe on the port tack compelling a canoe on the port tack compelling a canoe on the starboard tack shall limber of go about, but shall never bear away. A canoe on the port tack compelling a canoe on the starboard tack thus to give way, forfeits all claim to the prize.

RULLIT-Canoes going free shall always give way to those close-hauled on either tack.

RULLIS-Canoes going free shall always give way to those close-hauled on either tack.

RULLIS-When canoes closekauled are approaching a shore, him would be in danger of fouling the obstruction, the canoe to windward shall, on being requested, go about, and the canoe requesting her to would be in danger of fouling the obstruction, the canoe to windward shall, on being requested, go about, and the canoe requesting her to the canoe to the windward of her, and by so close to cach other windward of her, and by standing on would be in danger of running argound or of fouling the obstruction, then the canoe that is to leeward shall, on being requested, at once bear away until sufficient comis allowed to the weathermost canoe to clear the obstruction.

RULE 23.—A canoe may linf as she pleases to prevent another comise to prevent the other passing to leeward; the leestle to be come to prevent the other passing to leeward; the leestle to be come to the canoe to the canoe that it is a stached to or weighed on board the canoe during the regard to the association signal. Lutgs and gaffrigged sais are the only once which have an available masthead, but every right has dead of the regard to

SEAWANIIAKA CORINTHIAN YACHT CLUB.—Entries for the twelfth Corinthian race must be filed with the Secretary, Mr. M. Roosevett Schuyler, No. 5 Cortlands treet by 3 P. M. on June 15, and must be accompanied by the measurement of the yacht entered, according to Seawanniaka rules, certified to by the measurer of the club from which she enters, or by her owner, together with a list of the proposed crew, their several occupations and addresses. The

courses to be sailed are as follows: For schooners and first and second class sloops, from an imaginary line between the club steamer and Fort Walsworth to and around buoy No. 10 on the Southwest Spit, on the port hand, thence to and around sandy Hook Lightship, on the standard and hand and the same course to buoy No. 15 the same course to buoy No. 18 the same starting line to Bank and outside of buoy No. 55 to the point of Sandy Hook, going and returning. For third-class sloops, from the same starting line to and around buoy No. 10 on the Spit, on the port hand, thence to and around the Scotland Lightship, on the starboard hand, and return over the same course to buoy No. 15, keeping to the eastward of the West Bank buoys and buoy No. 15, as before mentioned. For fourth-class sloops, from the same starting line to and around buoy No. 10, on the Spit, thence to and around buoy No. 54, as before mentioned. For fourth-class sloops, from the same starting line to and around buoy No. 10, on the Spit, thence to and around buoy No. 54, and back over the same course, The finish of all the yachis will be made across an languary line between the club steamer, a station boat and buoy No. 18.

naginary line between the club steamer, a station boat and broy io. 16.

THE FISHING FLEET.—An interesting discussion has been carried in in the Cape Ann Atheritisar concerning the necessity of giving turnishing smacks more depth and less beam. The gengral sentiment seems to be that a little of the reform movement which is latitudent of the reformal reformal to the dangers and number of vessels employed, and that the introduction of a model and reform towards reinlicing the fearfully long list of missing, and the many alterests homes in Gloncester. We have in this journal published in towards reinlicing the fearfully long list of missing, and the many alterests homes in Gloncester. We have in this journal published estimated in the result of the results of the resul

neir introduction into our waters.

OSHKOSH VACHT CLUB.—The annual meeting of the Oshkosh acht Club for election of officers resulted as follows: Commodore, establishment of the Oshkosh acht Club for election of officers resulted as follows: Commodore, establishment of the Oshkosh acht Club for a lively season is pulse fattering. A fleshing step of the outbook for a lively season is quite flattering. A fleshing step of the outbook for a lively season is quite flattering. A fleshing step of the outbook for a lively season is quite flattering. A fleshing step of the outbook for a lively season is quite flattering. A fleshing step of the outbook for a lively season is quite flattering. A fleshing step of the outbook for a lively season, and is now one of the fixtures for this season. The mooring grounds if the O. Y. C. for the past sten days have presented a lively seen, he various craft that will be put into commission this week are arried Morgan, Niobe, Beatriec, Sapho, Bease, Otto, Vinaroy and respect. The yachting season opens rather late. A cold north-cite of fifteen to twenty days' duration has not tendency to excite uch cuthusiasm for sailing in open boats.—C. C. M.

nuch cuthusiasm for sailing in open boats.—C. C. M.

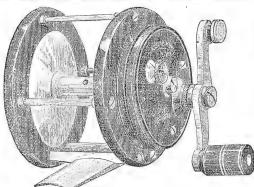

EASTERN YACHT CLUB.—The annual spring regatta will be sailed
une 2i. The classes for first and second class schooners and first
lass sloops are open to yachts of the New York, Atlantic, Seawanlass, New Bettlord, Boston, Durchester and Fortland yacht clubs.
And the state of the class of the class of the class of the class schooners and containing the clubs.
It is to the racing. The annual cruise will be to find dark mannual cruises to the racing. The annual cruise will be to find the clubs of the class schooners over 70th, water line. Second class schooners—

SHIELDS'

American Improved Gut Leader

CASTING LINE.

My invention consists in adding to a leader a reenforce at the several points where the upper flies
are to be attached, by which the size of the line at
such point is doubled, the result being that the wear
upon it by chafing from the loop of the fly-snell is
greatly prolonged, and the doubling of the leader
in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper flies of a
cast about a leader of single gut, the latter soon
becomes badly chafed and its enameled surface
worn off.

in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper flies of a cast about a leader of single gut, the latter soon becomes badly chafted and its enameled surface worn off.

The property of the leader in the act of looping the snell to the sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is not sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly, as a single piece of gut is not sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly is avoid these objections. The drawing Fig. 1 pepre seemed that the sufficiently rigid is a summer of looping the snell representation of the leader at the point of attachment of the fly is avoid these objections. The drawing Fig. 1, denotes a leader of silkworm gut adapted to the purposes of thy fishing for trout or bass, and as heretofore made, such leader being composed of several leads and about the leader, as shown at c. In carrying my invention into practice, I add to the leader at one or more points (according to the number of flies to be used in the cast in addition to the stretcher) an additional piece of gut A, which I term a "recovery of the summer of th

Answers To Corresponder

FLY OR WORM?

A NGLERS are seriously divided on the question of taking a trout with bait or with the fly. Ever since the lamented Dr. Bethune wrote his famous footnote to his edition of Izaak Walton, at a line where Walton gives directions how to put on a worm, and requested the reader to look elsewhere for directions, saying, "our hands have long been washed of the nasty things," there have been differ-ences in the camp as to the true methods of a "true" angler. It is a fact that we have two rival sects who are inimical, and who theorize in widely different manners, and a class who do not theorize at all.

'The devoted worm fisher affects to sneer at the ritual of his brother of the fly, and is often heard to declare that he can take more trout on a worm, and have more fun in doing so, than half a dozen fly fishers can obtain of either in the Those who belong to this school hold up Walton as an example, and maintain that as he was the great father of angling, it is the duty of all the brethren to follow his precepts and hold to the faith as delivered by him and the Dame Juliana Berners.

The ultra fly-fishers, who may be called the Ritualists, insist that Bethune was right, and that there was no scientific angling in the time of Walton, whom they revere as a good enough saint for his day, and declare that the object of ang-ling is not the taking of the most trout, although they will not allow that the Wormists can take more; but they claim that the fly is the only legitimate mode of capturing the fish. They profess the deepest reverence for Cotton and Bethune, and declare that whosoever fisheth for a trout with a worm is grossly perverting the ends of angling, lowering the dignity of the profession and pandering to the baser instincts of the fish. The saints of the Ritualists' calendar are those who have fasted in camp when trout were plenty but were in no mood to rise, and who would have stayed there and died of starvation sooner than descend to the use of bait to entice a trout to their frying-pan. The worm, the minnow and the gang of hooks are all equally abhorred of the Ritualist, and he looks upon those who make use of them as heretics.

The Ritualist regards Cotton as the founder of scientific angling, and he rejects with his whole soul the theory that the Worm-fisher is in any sense a scientific angler. He be-lieves that he can take more trout with the fly than the Wormist can take with his gross bait, because he can fish

double hooks or gangs he is also consistent, for he denies that the truths of fly fishing are subject to development, or that such practices are a whit above the ethics of the poacher. He is willing to accept the reel on top or on the lower side of the rod, the ash, lancewood, hornbeam, bethabara or the split-bamboo rod; the reel in all its varieties, with or without the click or drag, but all things claimed to be new in the matter of double hooks are regarded as false doctrine. He strenuously claims that a delicate leader with not more than three flies, dressed upon single hooks, is essential to every true believer, but that a float, sinker, or a bait should not be tolerated. If he appears to be a trifle bigoted, to the noncomformists, or to be mistaken on some points, they cannot question his devotion.

Then there is the Broad school of anglers-a class whom the Ritualist avers to be mere rationalists. The Broad angler totally rejects the doctrine that science is the sole end of angling, and stoutly maintains that so long as a man uses a rod and reel it does not matter what he lures the trout with. He prefers the fly to the worm, but charges the Ritualist with idolizing the fly and bowing down to worship it. He denies the infallibility of Cotton and of Bethune, and openly says that these teachers are to be followed as long as the trout prefer the fly to the worm, and no longer. He shamelessly buts on a worm when the trout cease rising, and confesses that he regards it as a concession to the baser appetite of the fish, and openly mocks at the Ritualist who would leave the stream when the trout are not in the humor for the fly. The Broad angler, in turn, pities the fisher who never uses the fly as one who knows nothing of the true principles of the art, and he refuses to fraternize with him.

Widely as these schools differ, the followers of each claim to be the only "true" anglers, but agree in classing the purely Worm-fishers as heretics for whom there is little hope unless they become converted. Sinfulness such as theirs requires a long probation before they can be received into the ranks of either sect, for some of these bold, bad men scorn the fly, and with a cord on the end of a sapling, which has no place for a reel and is devoid of rings, are in the habit of "yanking" a trout from under a root and swinging him high in air in the presence of one of the sectarians.

It is a matter for rejoicing to know that the fishery statistics will show that the heretics are decreasing in numbers, and the Ritualists are increasing, while the Broad men are standing still. The Superintendent of the Census accounts for it in this way: The influence of Forest and Stream is constantly causing the number of the Broad men to be diminished, and is adding them to the Ritualists; while the gaps in the ranks of the former are filled as fast as they occur from the lower grade, or heretics, who are taking a step higher when they accept the fly as an occasional lure, instead of confining the trout to the Dict of Worms.

"THIS DIFFICULT MISTERY."

THE coptious critic may affirm that the rhymes of "the Honorable and Ingenious Robert Coote, Esq.," are not poetry, but doggerel. All such unfavorable comment, however just it may be, should be checked by our author's modest deprecation that "the utmost of my ambition in publishing this little room was only to oblige and instruct my fellow sportsmen; and to communicate to them the knowledge I have acquired and treasured up in this difficult mistery." That surely was no mean nor unworthy intent; and some of the commendatory letters written to the rhymster, and printed by him, as an apology for the publication of his verses, would seem to indicate that in return for his "wrestling with the muse" he had received "the thanks and admiration of all those gentlemen who are fond of that entertaining diversion."

"The Compleat Marksman" is a very old book-just how old we have not been able to determine. The publisher neglected to put a date on the title page, and the author was equally careless in writing his preface. But the antiquated type and style of the work, with the obsolete terms and the references to the antiquated sporting implements, all afford ample evidence of the great age of the book. The copy from which we have made the transcript on another page has been through many vicissitudes. Its carefully repaired pages give evidence that it has been an object of the book collector's loving care; and other marks not less positively indicate that it has descended in the scale of fortune even to the sidewalk old-book stand. For the loan of the book we are indebted to Mr. W. P. Stephens, of West New Brighton, Staten Island.

Although written probably a century ago, "The Compleat more water in the same time. In regard to flies tied on Marksman' is wonderfully fresh and timely even now. It is to call on him early.

only another illustration of the old saw that there is nothing new under the sun. Sporting appliances have changed, new and more perfect field equipments have been provided, but human nature does not change, and the sportsman of to-day is the sportsman of a hundred years ago. Take, for example, the long-waged and never-ending war of words about wing shooting and treeing grouse. It is rather curious to learn that the sentiments of the anti-treers were so long ago expressed in the rhymes of this old book. And there is the man who, with fatal blockheadedness, persists in dragging his gun after him muzzle foremost; he lived and died in Coote's time, too; and so did the unfortunate fellow who blows down the muzzle to learn if it's loaded—and finds out that it is. The persistency of these types is suggestive, and it is somewhat comforting to know, as this old book tells us, that the prevalence of the didn't-know-it-was-loaded idiocy to-day need not be taken as an indication that the race is degenerating, for there were just such hapless victims of folly in "the good old times."

BLUEFISHING.

ONE of the principal amusements of the salt water angler is the pursuit and capture of the bluefish, or taylor, as it is called on the Southern coast, and when the fish is taken on proper tackle it is sport of a high order. avage character of these fish renders them perfectly fearless, and if they are at all plenty they seldom hesitate to bite freely. The coming of the bluefish is watched for by fishermen and anglers of all kinds and degrees. Their plentiful numbers and ready sale makes them an object of interest to the market fisherman, and the ease of their capture causes them to be awaited by every small boy who can sail a boat.

They are mainly taken by trolling a line astern of a catrigged boat sailing from four to six knots an hour, with a leaden or ivory "squid," so called from its fancied resemblance, when rushing through the water, to the small decaped which bears that popular name. This squid is from three to six inches long, and is flat or round, according to taste or the material of which it is made. The bluefish in rushing for it takes the hook which is soldered to its lower end. The "squid" is also thrown from the beach and hauled rapidly through the surf. These modes require no skill, and the chief sport is in the sailing which is necessary, the fishing being mainly an excuse to get out on a yacht, for the fish once hooked it becomes merely a question of strength to bring it to the boat.

"Chumming" is much more sport, the fish then being captured with rod and reel, from a boat at anchor in a tideway or channel. The hook is baited with a large piece of menhaden, and particles of the same are chopped up by the boatman and thrown over to entice the school to the place. This finely chopped fish is technically called "chum."

The charm of this style of fishing is in the flerce fight of one of the most savage of fishes, compared to which the pike is a delicate feeder. The bluefish rushes, leaps, and makes frantic struggles to smash the tackle and escape. The insatiable appetite of the bluefish, which will bite a piece from a living fish in apparent wantonness when perfectly gorged, is a sure guarantee of sport if a school is near. They will take a bit of rag, a fly, or anything that appears to have life, but their saw-like teeth will cut any line which they come in contact with, and a fly is only good for one fish. A foot of steel wire is usually attached to the line above the hook, and their teeth will even mar this.

The fish have come in good numbers this week, and many of large size have been taken at Fire Island. Mr. Henry Havemeyer has captured several of eight pounds weight already, near his summer house at Fire Island. The Babylon (L. I.) papers have accounts of many good catches, and the season has opened earlier than many expected it would, judging from the weather we have had. The fish take the hook more freely when they first arrive, if there is any difference in the seasons, which some deny, and are usually large. The smaller ones come later, and the big fish often disappear until August or September. In July the schools in the bays are mainly fish of two or three pounds, and even outside there are often no large ones to be found.

Taking the bluefish all in all, they probably furnish as much sport as any one of our fishes. At least a greater number enjoy it, from the troller for ten-pounders to the fishers for the little "snappers" in Long Island Sound. We intend to have some of it ourselves very shortly, even if it is necessary to troll for them from a cat-boat. Our main object in writing this is merely to let *Temnodon* know that we are aware that he is registered at Fire Island, and that we intend

The Sportsman Tourist.

A BUNCH OF WILD CELERY.

A BUNCH OF WILD CELERY.

Iffe in Argentum was growing stale. The round of diurnal horse-racing and dog-flahting, and nocturnal poker and faro-playing, varied with an occasional shooting scrape, and its concomitant lynching, had begun to be monotonous, and it was with a feeling of relief that, one morning, I saw Ignotus stroll into the office, and heard him make the proposition of a week's hunt in Cimarron Park. The offer was closed with, almost before he had fluished speaking, and the rest of the day was spent in gathering together camp impediments, reloading cartridges, and making general preparations for a plunge into savagery.

I was born twins, and just then Essu, the hairy hunter, held the whip-hand over Jacob, the more pacific dweller in tents. In fact, I find, as a general thing, that Esau does rather predominate, and that the mecker Jacob very seldom finds an opportunity to enjoy his heirship, and when he does the elder brother usually finds that he has sold his birthright for a very watery mess of pottage.

The sun had just flung his first deflant lance at the head of El Rey, as our cavalcade started. "We were seven"—at least the unanointed eyes of common mortals would have only taken cognizance of Huz and Buz, Rob and Rena, Swipes, Ignotus, and myself—catalogued thus in the order of their relative importance. In fact, however, there were several more of us, whom only the initiate could see. Esau and Jacob rode double on Rena's back, while, perched on pommel and crupper of Ignotus's saddle, sat Fun and Laughter, and Song and Wood-craft. Even Swipes was tri-une—and, wrapped up in one yellow hide, there trotted or scampered on before us, the Frolicsome Puppy, the Stanch Bearfighter, and the Cynie Philosopher. No wonder, that before such a composite crew, the "camp-robbers" flew screaming away, and the chipmunk darted hurriedly into his hole.

The first half mile down the valvey was merry enough, but when we turned to the left, and began climbing the flank of El Rey, then "trouble began." Have you ever be

"As all things cease to be As no life lasts forever— As e'en the drearlest river Winds somewhere out to sea,"

Winds somewhere out to sea,"

so even this El Rey trail ended at last, and we found ourselves on Bone-break Mesa.

Seen from a distance, this portion of the range looks like a lazy giant, prone upon his back, one foot and leg drawn partially up, his clasped hands beneath his head, elbows projecting skyward, and face turned dreamily toward the wooling South. On the instep of the drawn-up foot lies Argentum—the leg up to the knee is El Rey, where Bone-break Mesa sweeps gontly up to Cimarron Park, which lies upon the breast, guarded on either side by the uplifted elbows of Dos Hermanos (the twins), and overlooked by the mighty face of El Conquistador. We had reached the knee, and here, by a spring, we stopped for lunch. Through hollow stalks of wild parsley, we sucked the clear, cold water, and revelled in the mild intoxication of unnumbered cockfails of genuine Mountain Dew. Under similar circumstances once The Rhymer's brain had been so affected by the potency of the draught, that he had effervesced in the following lines, which he called the A SONG OF A SPRING.

Born of the cloud and the dew, Daughter of Frost and Snow Nursed in the Ether blue, Where the cooling North-winds blow

Torn from the iceberg's crest, Sucked from the fens of the South, Out of the wastes of the West, Up from the harbor's mouth-

Gathered and swept along By the rush of a rolling world,
Where the planets hush their song,
And the lightning's wing is furled—

Caught on the mountain's peak, Held by the slippery crag, Kissing the rough rock's cheek. Cooling the scoria slag—

Threading the crevices dark Of the caverns underground, Where the Pixies' magic mark On the shining ore is found-

Away from the light of the sun. Freed from the upper heat, I crawl and fly and run With neither wings nor feet,

Till I leap from the mountains' side In a burst of riotous glee, And haste with a jubilant pride To join my Mother, the Sea.

Lancheon over, and while the horses were enjoying their Luncheon over, and while the horses were enjoying their dinner of native timothy and clover, we made our dessert npon the wild celery which grew in profusion around. What the Alpine strawberry is to the Triomphe de Gand—the sweet brier to the Marcelal Niel—crab cider to Virginia gple jack—is the mountain celery to its fat, pauppred, overgrown, civilized compeer. It has a tang peculiarly its ewn—a woodsy flavor that contains within itself all the possibilities of taste. To the eye it is "a thing of beauty and a joy forever."

The pure sea green of its deeply pinnatifid leaf contrasts well with the angelica white of its supporting stalk. It has an edor suggestive of the nutty flavor of the mushroom, the

faint aroma of upturned soil, the bouquet of long imprisoned Lachyma Christi, of everything that is dainty, sweet and wholesome. There is something elusive about it, as though it were too shy to yield itself directly. As some stars can only be seen when not directly looked at, so the fragrance of the wild celery can be caught only by a sidelong approach. Snuff it boldly and coarsely, as you would a bottle of cheap perfune, and you miss it entirely.

Coy as a wood nyarph, it flies the too bold wooer, and bestows itself only upon the modest suitor. Ethereal, delicate, penetrating, this fragrance appeals to and excites your appetite, even before you take the stalk into your mouth, and then the taste reenforces the smell. As the crisp white stalks crackle between your tecth, you absorb the glow of the sun upon the mountain-tops, the coolness of the snow under eaves of overhanging rocks, the virile strength of the rich loamy soil in which it grows, and the freshness of the reeze which kisses is feathery fronds. Like a trout, it must be eaten when first caught—while still cool and moist with the juices of the soil. Salt degrades it—we 'ried it once, then prayed for pardon, and promised to sin no more. The eater of it knows no surfeit—the appetite grows with what it feeds upon. It titillates the nerves of the palate, so that each crisp morsel tastes better than the last. No wonder the gods of old chose Mt. Olympus for their dwelling, if peradventure they found 1 tere the wild celery. A diet of groser stuff, and fill them with celestial ichor. One's thoughts, too, could but be sweeter and purer—for's it "ascends me into the brain, and purges me therefrom the crude vapors which do befog mine intellects."

Refreshed and strengthened by our meal of ambrosia and negtar, we grired up our loins and struck out across Bonebreak Mesa for Cimarron Park. Whence this mesa derives its name, I know not, for an easier route to travel lies not in these mountains. Picture to yourself an elevated table-land, from two to three thousands

bilities of fabulous mineral wealth concealed in yonder rocky fastnesses. Whip and spur, Ignotus, if haply a dash over these breezy downs may sweep away this dank fog of fore-boding!

A spurt of a mile or so, and we draw rein to wait the arrival of Huz and Buz, who, undisturbed by our vagarles, are quietly plodding along under their bulky packs. Too well trained are they to stray from the trail, or even to hurry their pace, although their foolish human masters may cavort hither and yon in senseless sport. "Business is business" with them, and they attend to it strictly, looking forward to the end of the route, when comes release from their burdens, and a temporary "surcease of sorrow."

While waiting for them to come up, something in the little grove of firs to our right attracts the attention of Swipes, who with starboard ear cocked gallantly forward, sails boldly off to reconnoiter. Under the butt of a fallen tree is crouched something which his well trained nose and eyes proclaim to be a stranger to him. "Bears I know, and rabbits I know; wolves and wild cats have not escaped me: even the fragrant Mephitis Americana has not been unknown to me, but, in the name of Canis Major, or of dog-headed Anubis, what are you?" So queries Swipes, with many significant "woof?" and much indecisive signalling of his remnant of a tail. Alasl with him, as with many of his wiser (?) two legged brethren, discretion proves the worser part of valor, and a plucky dash at the unknown foe is followed by a sudden retrograde movement, accompained by a wild pawing at mouth and nose, and whines of astonishment and pain.

"Porcupine?" quoth Ignotus, and his assertion is corroborated by the return of Swipes, wearing a false moustache of black and white quills, while he vents his feelings in suppressed canine profamity. "If it had bit, or clawed, or scratched, I wouldn't have minded it, but who ever saw a beast with a hide full of hornet stings?"

Nor are his wounded feelings healed till Ignotus, having relieved him as far as possible of t

propatory to turning in, I suddenly became aware of voices down the creek. The words were indistinguishable, but I clearly heard the mellow base of a man, interrupted now and then, by a sound that was startling in that wild neighborhood—the rippling laugh of a girl. I stared at Ignotus in amazement. He, smiling quietly—"What you hear is not the ozo humana, but simply the Spirit of the Tallula talking to Dos Hermanos."

"What do you mean? Have you gone clean daft?"

"No: but I tell you no human larynx makes those sounds. I have heard them often, and especially here. Echo plus imagination, that's all. Don't believe it? Then go and find the talkers," which I did, or rather tried to do; but the delusive voices retreated as I advanced, leading me further into the sombre darkness of the spruce woods, as Will o'the Wisp and Jack o' Lantern decoy the credulous rustic into bottom-less morasses. Returning baffled, Ignotus met me with gentle gibing, insisting that the dust of the town still stopped my ears, and that my mistress, Nature, would not believe in the fervency of my devotion so long as I mistook her mellow accents for the grosser voices of humanity.

Awaking early next morning, we started out, Ignotus to the peak for sheep, I to the edge of the park for deer. But the beauty of the dawn soon laid its spell upon me, and, laying my rifle aside, I stretched myself at the foot of a clump of spruces, singing, with the melancholy Jacques, in spirit at least, if not in words,

"Under the greenwood tree Who loves to lie with me

"Under the greenwood tree Who loves to lie with me And tune his throat To the wild bird's note, Come hither, come hither, come hither: Here shall he see No enemy But winter and rough weather.

Who doth ambition shup And loves to lie in the sur Seeking the food he eats, And pleased with what he gets, Come hither, come hither, come bither; Here shall be see No enemy But winter and rough weather."

No enemy
But winter and rough weather."

Looking across the grassy sea of the park to the buttressed peaks of Dos Hermanos, I was struck with the mingled wealth and poverty displayed by Nature in the selection of pigments for her mountain landscapes. Circumscribed in the number of distinct colors, she revels in the boundless variety of shades. In that peak that rises before me, she is limited to grays and browns, but what endless combinations and varying thits! Think of any shade of those two colors, that you will, wide apart, or varying by almost imperceptible differences, and there they are before you. All the names familiar to painters—drab, chocolate, umbers and siennas, burnt and raw, russet, bistre, madder, cassel, cappah, vandyke, ashes-of-rose, pearl or silver gray—find their carclative colors on those crags. And then the depth and the richness of her hues! Look at that sky! You never saw blue before! It is no pale, languid, pulseless, skim-milk color, but a deep and vivid ultra-marine, a blue which glows and shines with a scintillant lustre, the blue of the heaven that gleams in the eyes of the woman you love. To "have the blues," were they such as shine above us here, would be to be permeated with a wealth, a softness, a glory of mingled purity and passion that would transfigure one's whole being. Our Eastern skies in their best estate, give one the idea of an over-arching canopy, blue-washed by some cunning artificer, through which, if one had a stick long enough, he could punch a hole, and see what lay above; but here, one for the first time grasps the idea of infinite space, as he gazes upward into the blue immensity, and the effect of immeasurable distance slowly grows upon him. As the eye must gradually become accustomed to the obscurity of a darkened room, ere it can distinguish objects therein, so here, the mental, if not the physical iris dilates, as the vision penetrates further and further into the illimitable depths of zure. Lucky for me I am not a painter, or I would dash my color box to p

drous color with my paltry combinations of ground dirt and unsavory oils.

Not so delightsome to the eye are the greens—with the exception of that of the wild celery, of which I have before spoken. The spruces are dark and dingy—a melancholy, rusty hue that sets the teeth on edge like the filing of a saw. Early in the spring the quaking asp (Populus tremuloids) shows a delicate pea-green tint for a day or two, but it, too, soon becomes blotched and dirty. (Where Bierstadt and Moran get the wild emerald green of the foliage in their paintings of the Rockies, I am at a loss to conceive, unless they "evolve it out of the depths of their inner consciousness," At any rate, I never saw such tints in these ranges, and I know them pretty well from Flathead Pass to the Mogollon Sierra.)

ness." At any rate, I never saw such tints in these ranges, and I know them pretty well from Flathead Pass to the Mogollon Sierra.)

While noting the colors, I found myself the focus of attention of some "camp-robber" of an enquiring turn of mind. One, especially, was as fussily active as though he were a member of a Congressional Investigating Committed At first he contents himself with advising me to go home "qui-ick!"—"qui-ick!" in a sympathetico-monitory, and then in a more decided and didactic way. Finding that I receive his well-meant advice in silence, he becomes derisive—makes sport of me—points the feather of scorn at my outré appearanco—makes uncomplimentary allusions to my personnel, and even hints darkly that I am no better than I should be. Failing still to move me, he waxes indignant. pours out a flood of Billingsgate at me, scolds like a fishwife, rages like a Moenad, even, I am convinced, swears like a pirate, in whatsoever avian oaths he can "lay his tongue to." Exhausted by his own efforts, or perhaps, awed by the calm imperturbability with which I receive his demonstrations, his mood changes; he becomes silently contemplative—examines me from every point of view, with many a grave turning of the head, and a half-suppressed "lawk" of mingled wonder and dread—scratches his bill doubtfully, and seems disposed to give me up generally as a thing beyond his ken. At this moment, I lower the field glasses, through which I have been studying him, when he nearly falls off his perch in a spasm of terror—and then scurries panic-sticken away, filling the air with clamorous shricks of fear. If he ever no covers from the shock, and does not die a raving manlace, he will no doubt, in years to come, be halled as the champion liar of Cimarron Park, when he tells his wondrous yarn about the monster he once saw, which it could put on or take off at pleasure.

While still chuckling over his discomfiture, I heard a snoilling whine behind me, and turning, discovered two young bear cubs, each about the size of a Newfoundland age, regarding me with a most comical look of mingled fun and shyness upon their faces. "Here was richness!!" I hnew that Madame Ursus was too good a mother to be far dislant when her darlings were taking an airing, and as, under the best of circumstances, this amiable female is disposed to be rather short in temper, not to say huffy, and prone to take offence when none is meant, and especially so rable her darlings are still, as it were, in the cradle, the situation was one not wholly devoid of unpleasant features. The, this was a fine opportunity to capture a couple of playful pets, but several considerations restrained my rash andor. First, I hadn't lost any bears. Second, I remembered the historical character who once "caught a Tartar." Third, the Frenchman's experience occurred to me—"Ven you hunt zo bear, it is grand sport! But yen ze bear hunt you, by gar, ze foot is in the udder boot!" And lastly, I suddenly recollected that the morning was well advanced, and that Ignotus was probably growing uneasy at my absence. Now, if there is anything on which I pride myself, it is consideration for the feelings of others, an I as just at this moment, I heard a quertulous sniffling in the spruces just behind me, I deemed it my imperative duty to inasten back to camp, and relieve my companion's naxiety. Besides, he might be in absolute danger. We were in the country of the ferocious ground-hog and the fierce porcupine, to say mothing of the venomous rabbit, and deadity coney, and who knew at what moment he might be exposed to attack from the state of the second of the second of mere selfish pleasure.

knew at what moment he might be exposed to attack from these predatory foes.

"Shall I allow any considerations of mere selfish pleasure to detain me from the side of my faithful comrade, who even now may be in imminent peril? Perish the thought! A million bears shall not keep me from treading the path of duty, painful though it may be! and, stern in this determination, I would not even star to receive my distinguished visitor, but hastened back to camp, with auxious speed, and drew a deep breath of relief when I found Ignotus all safe, and calmly picking a rib of mountain sheep. When I told him, with tears in my eyes, what I had sacrificed for his sake.

sake,
"Hight you were," was his answer. "Unless you can
split a bullet on a knife-blade at a quarter of a mile, in a
dark night, with a Texas Norther blowing, and you shaking
with a Wabash chill, don't you tackle a she-grizzly when
the's got cubs. There ain't many things I'm afraid of, but
there's two I don't allow to buck against, as long as the Lord
leaves me my senses, and them's a woman and a she-grizzly,"
(I found out afterward, that once in his life, the old misogymist had encountered each of these enemies and in both st had encountered each of these enemies, and in both
uses had come out second best.)

H. P. U. eases had come out second best.)

CAMPS OF THE KINGFISHERS.

UPPER AND LOWER WATERS OF INTERMEDIATE LAKE.

CAMPS OF THE KINGFISHERS.

UPFER AND LOWER WATERS OF INTERMEDIATE LAKE.

IN making up our minds where to build our camp-fire for this year, 1881, we remembered our longing the year before to visit the upper waters of Intermediate Lake, which, as mentioned in a previous letter to Foreist And Stieland, fow wer, strung together by a system of little, narrow, crooked intermediate Lake on the guide maps and by the inhabitants of the region. Why it is so called is not quite clear, unless it is because they want to invest Intermediate with a sounding "bigness" that it cannot in justice lay claim to; and as it will not rob Central Lake—the lower and largest one—of any of its beauty to give a word of praise to the upper ones compaing the chain, I shall, further on, have occasion to make a few "amphibious remarks" about them.

This year the Scribe and the Editor (Jim) started a couple of weeks ahead of the time set to go a-fishin' by the party, in order to make a long contemplated trip to St. Paul, Minn., Minneapolis and Duluth by rail, and a steamer ride down Lake Superior. After a stop of a day or two at the Sault they were to come on around via Torch Lake, and join the party at Central Lake on Wednesday, July 27, in time to start together for a camp above.

This loft the writer to go it alone (of late years an occurrence of frequent regularity); but the camp stuff having been shipped to Central Lake ten days ahead I made the start on the aroning of July 26, in light marching order, burdened only with my rods, a supply of "plug terbacker," and a light heart, bubbling over with pleasant anticipations of two or three weeks of quiet sport and rest in the "bresh" of North Hichigan. At Fort Wayne, Ind., I was joined by Mr. R. and Dan T. Sloan, of Decatur, Ill.; the former a stranger to the ways of the angler, the latter a veteran bass disher of many years' experience, and a "charter member" of the old kingfisher Club.

Bach year, savo one, since the war, the write and old Dan lave broken bread together at the same rude tabl

me ways of the angler, the latter a veteran bass fisher of many years' experience, and a "charter member" of the old kingfisher Club.

Each year, savo one, since the war, the write and old Dan bave broken broad together at the same rude table, and told fish lies "till night waned into morning, bround the same amp-fire. We have slept under the same blanket in all weathers, fished from the same bucket of minnow, caught bass in the same snow storm, been wet by the same rain, warmed by the same fire, have divided the last "chaw to-backer," drank from the same b-b-brook, and, in short, have been, in the closest and best sense, brothers of the angle.

For many years he has had only the use of his left hand and arm, the right hanging limp and shrunken and utterly useless by paralysis. His right leg is a little better, enabling him to hobble around after a fashion; but put him in a boat, with a fishing-rod and some one to handle the cars, and he is at home—"life hath no lacking charm." And then he is wonderful handy with his left "im" for a naturally right-handed person. Holding the hook between his teeth, he will take a rog or minnow from a bucket, hook it on properly and make a twenty-yard cast from the reel with a precision that never fails to astonish a beginner. With a marked hook between his teeth he will take a half dozen half bitches around the shank that will not slip; attach a float or sinker to his line when necessary, and do a score of other things that are difficult of accomplishment to a person with two hands. And yet, laboring under so many disadvantages, the pure love of the sport has mastered a thousand difficulties; and to-day he to no of the beat bass fishers that "draw comfort from the witers." This is old Dan Bloan, a friend to all the brother-bod of anglers; and if the reader have the heart of an angler in him 1 know he will pardon this personal mention, and the his sympathies go out to him in his affliction.

Brother R., (we dubbed him brother from the start) a rela-

*An account of the Kingúshers' campaign of 1830 was given in the former AND STREAM of June 30, 1881, and the three succeeding issues.

tive of Dan, and a prominent merchant of Decatur, was a new quantity in the party. He had never camped out, had caught chubs and shiners with a bent pin in his early youth, and had yet his maiden hook to flesh in bass, but he was a keen and successful sportsman in the fold, and one who would take long chances on a double shot on grouse or quail, and rarely fail to bag both birds. These two made up the party.

and rarely fail to bag both birds. These and base at party.

Leaving Ft. Wayne we settled into our seats; and Dan and I took up the line of fish talk where it had been broken off nearly two years before. Recollections of old camp fires on the Tippecance, Wabash, Kankakce and streams and waters of lesser note beguiled the time; and between chapters, the scenery along the road was admired; overything had a rose color that day, for were we not boys again, and goin' a fishin'?

had a rose color that day, for were we not boys again, and goin' a fishin'?

As we crossed a stream or passed some of the many beautiful little lakes that dot the landscape along the upper line of this road, wagers were laid that behind yonder old log or just below that boulder a bass might be lured to his death by slipping up and easting in from the screen of that overhanging bush; or off yon point in the little lake to the left, just there by that patch of water lilies, was sure to be a hungry pickerel waiting to be skittered to his downfall.

Bro. R. sat by and took in all this stream of fish lore in silence, probably storing away in his mind a point here and there for future use, but more likely thinking he had got mixed up with a pair of escaped lunatics. Suddenly, however, the spirit of the sportsman in him blazed out as a pair of wild ducks rose from a small lake we were passing, and with a startled quack! circled a moment and wheeled away toward the further shore.

"What a splendid double shot!" and instinctively an imaginary breech-loader came to his shoulder. "If I had been behind that clump of willows I would have got them both," and he craned his neck out of the open window and watched them till a curve in the road hid both ducks and lake from view.

The long summer day slipped away before yer were aware.

them till a curve in the road hid both ducks and lake from view.

The long summer day slipped away before we were aware of it, and 9 o'clock found us at Grand Rapids, where the train considerately waited an hour and a half for a connection, which gave us a chance to stretch our legs and limber up the stiffened joints in our backs. We had intended going in by Traverse City and Torch Lake on Wednesdays, and not caring to lose a day and night at Traverse or Elk Rapids, we decided to go on to Mancelona and take wagon across the country via Bellaire to Central Lake, a distance of twenty-one miles; so at 6 o'clock next morning the genial phiz of Charley Persons greeted us at the Mancelona House, looking mayhap a shade or two sweeter, but not a day older than a year before. The morning was quite chilly, and a cup of hot coffee, a regulation beefsteak and a score or two of biscuits that looked as if their growth had been suddenly stopped when quite young, braced us up for the long ride. While waiting for the wagon that Persons had sent for to take us across country we interviewed the pet bear, who a year before was a little fellow of a few weeks old, now a great clumy lubber, full of quaint tricks, and "sasya and fat as a 'possum in 'simmon time." As we approached, he stood up on end and reached out a big, awkward paw for a friendly shake, but as our limited acquaintance did not seem to warrant the familiarity, the profered civility was declined with thanks, Dan remarking that "insamuch as they had never been even introduced, the bear-faced impudence of the follow was rather refreshing."

"That bear," said a hanger-on, "is the knowinest critter you were seed; fuller o' tricks than a pleece court lawyer is o' meanness. Ought to see 'in pull the cork out of a bottle

of the follow was rather refreshing."

"That bear," said a hanger-on, "is the knowinest critter you ever seed; fuller o' tricks than a pleece court lawyer is o' meanness. Ought to see 'im pull the cork out of a bottle o' sweetened water and lay on his back and drink it. Tuk to it from a cub, nateral as a Jerseyman to applejack; drink a bar'l of it every day of I'd give it to 'im. And them tricks o' his'n, guess he's not a hull circus with four clowns; oh! no; I guess not! See that deer in that pen?" pointing to a mild-eyed young deer in a board inclosure near by—a poor, lean thing that looked like a skeleton, "that deer hes jest laffed hisself to a shadder—nuthin' left but the runnin' gears, ye mout say—at the antics o' that bear. An' the chickens around here, most on 'em haint got no more'n a half a crap o' fethers on 'em—shuk 'em off laffin' at that bear—tact. Why, that bear—"

of fethers on 'em—shuk 'em off laftin' at that bear—fact. Why, that bear—"why, that bear—"ieth forbear!" growled Dan, "the wagon will be ready in a fow minutes;" and we left him "waggin'" his jaw and gazing after us with an expression that said plainly, "Mean skunks, them fellers; no drinks out o' that party."

We stowed our traps in a two-horse wagon, and mounting into a couple of seats with good springs under them, were soon out of sight of the sleepy little hamlet and into the shadows and sweet odors of the silent woods.

into a couple of seats with good springs under them, were soon out of sight of the sleepy little hamlet and into the shadows and sweet odors of the silent woods.

The drive to Bellaire was an improvement over that of the year before, many of the roots having been cut out of the road, which reduced the jolts very materially and enabled us to jog along at a good "hickory," as Smith, the driver, expressed it. On reaching the first little stream after leaving the high, sandy plateau, we were, however, tired enough of the wagon to get out and rest a few minutes and take a long draught of its clear, cold water as it went laughing and gurgling through the shadows on its way to Grass Lake. Cance Creek, I think Smith called it, but if it were ever nav, gated by a cance it must have been one modeled for the fairies, as it was choked up with old logs and fallen cedars, and overlapped by drooping branches much after the manner of Cedar River and most other streams in this region. Smith said there were some fair-sized trout in it further down, and he had frequently seen them at this point as he crossed the little low bridge on his trips to and from Bollaire. Bro. R. and I crept stealthily through the bushes along the banks for some distance, hoping to see the flash af a spotted side, but were disappointed, and clambering back into the wagon Smith resumed his "persuader" and busied himself in a laudable endeavor to keep his "off hoss" from pulling through the harness—backwards. This was the only drawback we experienced during the drive. A mile or more out from Bellaire we got a passing view through the woods of the east end of Grass Lake, and a little further on Smith pointed out the bir at the mouth of Intermediate River, around which is said to be famous bass fishing. The sight of the lake put new life into us; we forgot the joits and backaches, and drove into the village feeling nearly as good as new. We stopped at Bellaire only a few minutes, as we wanted to get to Central Lake in time, if possible, to get into camp that

the swamp we could see the eagle's nest framed in the dead top of a cedar, and further up, past Pickerel Point, I could point out to the boys the mouth of our little stream near where I took the "bull bass" the year before. As we climbed a sand hill and entered the woods; we got a glimpse of the upper end of Lewis's Island, the scene of our first camp on Internediate. Passing Johnson's Nursery (Snowflake P. O.) we had a glorious view of the lake, which is here perhaps a mile and a half wide, and down shore in the blue distance we could see Deep Water Point, behind which the Editor, the Scribe and the Writer sought shelter once up on a time during a smart "blow." All this picture of green shore and lovely water, softened by a veil of blue, snoley haze that hung over it all, was a revelation to Dan and Bro. R., and only for the aches in Dan's old bones, caused by the rough joiting over the last few miles of road, he would no doubt have jumped out of the wagon and rolled in the grass by the roadside in pure delight.

From here up to Central the road was excellent, and by timely applications of the persuader to the right spot on the off horse Smith shook us up at a rattling pace, pulling up at Wadsworth & Thurston's store door a few minutes past 2 P. M., when, after a shake with friend Thurston, we at once set about getting ready for a start to camp at the head of St. Clair's.

We had arranged for the little steamer Wahwataysee

timely applications of the persunder to the right-spot on the off hores Smith shook us up at a rattling pace, pulling up at Wadsworth & Thurston's store door a few minutes past 3 P. M., when, after a shake with friend Thurston, we at once set about getting ready for a start to camp at the head of St. Clair's.

We had arranged for the little steamer Wahwataysee (firefly) to tow us, trays and all, up to eamp, but the water in the upper rivers connecting the lakes was so low that this was out of the question, as she drew twenty two inches light on an even keel, while on some of the bars the water was barely more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party more than a foot deep, so we had to fall back on the shall be a party of the packing boxes, and hired "Sallor Jack" to furnish the motive power.

We laid in a supply of butter, eggs, potatoes, etc., at the store, and when the boats were loaded our little fleet of four boats left the landing shortly after 4 P. M., with Frank Fran

We went early to bed that night, thoroughly tired out with our long railroad ride, twenty-one miles of jolting, and the hard work done after we left Central, and if our beds the hard work done after we left Central, and if our beds were lacking in any of the essentials of a first-class couch we failed to take note of it, for I believe we could have slept soundly that night roosting in the crotch of a tree. But just here a word to any of the brethren who may go up in that region to camp; don't go with a scant supply of covering for your bed, even if it be in July or August. At 8 o'clock in the morning we were all awake shivering with cold and chilled to the marrow. Frank and I could hear a stream of grunts and growls, mixed with hair-raising imprecations issuing from the tent where Bro. R. and Dan were trying to sleep. Getting out we pressed into service and divided between the two tents the bed clothing of Jim and the scribe. This brought relief and quiet for a short time, but we had became tog cold to sleep and crawling out we real. divided between the two tents the bed clothing of Jim and the scribe. This brought relief and quiet for a short time, but we had became too cold to sleep, and crawling out again Frank and I built a roaring fire and brewed a pot of red-hot coffee. By the time we had thawed out, the sun was lighting up the tree tops over the lake, and while the boys were getting ready for breakfast, I took a bucket of frogand a boat and slipped around to the sandbar at the mouth of the stream to try and get a fish to start a flavor in the frying pans. frying pans.

In a quarter of an hour I had a three pound pickerel and a

In a quarter or an hour I had a three points picketel but of large-mouthed bass of near two pounds, and in twenty minutes more Frank had them sizzling in the pana. It is scarcely worth while to speak of the superior flavor and sweetness of the first flash ryou camp. All the other flash you may catch, if you stay a month and cook them as you may, will not compare with it in toothsomeness and savory smalls.

Ye who have been there know how it is; and I ween can call to mind the "first odors" sniffed in many an old camp of

years ago.

After breakfast we got some lumber from our next door neighbor, young Benway, eighty rods above, and fixed up the kitchen. A substantial table, ten feet long, was constructed, on each end of which was placed one of the packing boxes to serve as a cupboard. The twelve by sixteen feet fly was stretched over this; and just outside, the little camp stove was set up, and within reach of it we contrived another table for the especial comfort of Frank and his pans and dishes. The spreading branches of half a dozen or more low cedars cast their cool shadows over our dining room the whole day, and standing in the shade of one of these after it was all finished, old Dun pronounced it "a fine blending of nature and art, with nature a good length in the lead" (Dan's a lover of the horse); and Frank ventured the opinion that it was "the boss" of all the summer kitchens in Michigan. A huze bundle of feathers from Benway's haystack made fragrant beds for the tents, and we only waited for Jim and the Scribe to take their places at our festive (pine) hoard to have the family complete. Last of all, we cut a cedar sapling, trimmed it, and planting it in the hollow of an old stump near the water, ran up the American flag, and not until then were we ready to turn the camp over to Frank and go affishin'.

Taking a boat, our rois and a bucket of frozs. Dan and I After breakfast we got some lumber from our next door

fishin.' Taking a boat, our rois and a bucket of frogs, Dan and I fished carefully along down the east shore to the outlet, and took only two large-mouthed bass and a small pickerel, which we thought rather a slim showing for a lake that was "as good as any of 'em and a leetle better." The outlet is at the left side of the lake, looking south, and treading down and around to the west, the shore forms a little bay—the extreme foot of the lake—where Sisson said we would find the best bass fishing in that whole body of water.

We fished it carefully, and conscientiously, and understandingly, clear around and back and acro-s, and never got a sign or a symptom of a nibble, not even from a sneaking pickerel.

Sisson's Lake stock went down, and we went up the west

Sisson's Lake stock went down, and we went up the west side, fishing quictly and studying the water clear around to the mouth of the river, at the head of the lake.

the mouth of the river, at the head of the lake.

We got back to camp at sundown, with a half dozen medium-sized bass and three or four small pickerel, and a very poor opinion of the fishing in that particular sheet of water. Bro. R. and Frank h.id stayed in camp and finished up a number of little things that had been forgotten after we thought everything was done. (Mem.—There is always something to be done in a fishing camp. This is for the eye of the young fry, not for the old "mossbacks" of the brother-hood.)

After supper we looked the camp over carefully, and find After supper we looked the camp over carefully, and finding no trace of Jim and the Scribe, we held a consultation of four to determine on what to do next day, the result being that Dan and I were to start early on a prospecting trip to the head of Six-mile Lake, and Frank and R. to fish around camp, in order to be there and do the honors if the boys should happen to arrive.

[Treenwist Oble.]

[TO BE CONTINUED.]

JUNE.

THROUGH dim arcades the pallid, trembling spires Of camp fires float up straight among the tr In listless mood the wind that never tires Drops to the whisper of a spirit breeze— And the June days came!

Days when through green leaves the sunlight stealing Weaves a fairy pattern on the grass;

Days when the glad soul hushes angry feeling— Days that are steps of angels as they pass. BOSTON, 1882.

JOHN PRESTON TRUE.

Hatural History.

BIRDS AND ELECTRIC LIGHTS.

Editor Forest and Stream:

I observe that some of your correspondents note with surprise the fact that the common redbird is seen in the winter in Northern States. When i was a boy, in Central Ohio, and caught quails in a pyramidal trap of laths or correstalks, the redbird was a common and plentiful inhabitant of that region. He sprung my traps much more frequently than did the quals, and I thought he maliciously imprisoned himself day after day in order to defraud me. I think the redbird winters always in Ohio, but it is more plentiful further so th.

But the redbird question was not the chief object of this note. Denver is largely lighted by electricity. Out toward

recond winters always in Ohio, but it is more plentiful further so th.

But the redbird question was not the chief object of this note. Denver is largely lighted by electricity. Out toward the suburbs are several lofty towers, upon the tops of which are powerful electric lights. They are visible twenty or thirty miles distant, and for a circuit of half a mile or more in every direction they give a light almost like day. These towers are an open framework of squared timbers and iron rods, built like an oil well derrick, but rising to a height of two hundred feet. About ten days ago one of the evening papers stated that a great number of birds were being killed about one of these towers, speaking of the destruction as "hundreds," and demanding that the electric light tosome extent, and am of opinion that the very bright light was unjustly attacked. I have since invest gated the facts to some extent, and am of opinion that the very bright light was the cause of destruction. The shughter occurred mainly on one night, to some extent the succeeding night, and none is reported since. It is stated by persons living in the vicinity, that on the night in question the light was excessively bright. Birds were filting about, twittening and singing all night. They flew against windows that were lighted. In the morning dead ones were found in the neighborhood of the tower to the estimated number of three hundred. Others were cruppled, with broken wings or otherwise disabled. The dead were bruised and lacerated, with many bones broken. A wild duck was found to have its breast mashed to a pulp. In some the breast was laid open as though split by a knife.

The cause of destruction was a source of much speculation. The prevalent opinion was that the brds flew against the telegraph, telephone and other wires that are quite numerous, but wires would not make such bruises or wounds. A more probable theory is that they dashed themselves to deeth against the framework of the tower. Immediately under the lamps there is no light, the to

column of darkness, the blacker because of the surrounding brightness. The birds were attracted by the light, approached the lamps and their eyes were so dazzled that they failed to see the framework against which they were dashed by the momentum of their flight. Hence the wounds, bruises and death. The neighbors say that since the fatal night the light has not been so bright, and they think no birds have been killed. One man said "perhaps they tumbled to the realist".

racket."

I visited another tower and learned that a few birds had been killed about it within the last week or ten days, the last observed were yesterday morning—two. A boy said the first he noticed was one evening just after the lamps were lighted, when he saw two birds fall from near the top of the tower. The birds killed were of all the varieties common to the town and vicinity—robins, orioles, blackbirds, kingbirds and many others.

W. N. B.

birds and many others.

Denver, Col., May 34.

[The case recorded by our correspondent appears to be in all respects analagous to what takes place each spring and fall all along our Atlantic coast. Migrating birds which to a great extent perform their journeys during the night-time, fly against the lights on the tower of the light houses and are thus destroyed in great numbers. While for the practical purposes of night migration most birds can see well enough; the introduction of such a disturbing element as a brilliant light, would undoubtedly tend to confuse and blind them. Any one who is accustomed to driving at night knows how difficult it is to see the road shead of him just before passing a street lamp or a brilliantly lighted window. If now, in their swift flight, when thus unable to distinguish objects, they strike against anything, the consequences are fatal. If a tower stands directly in the path which a species follows in its migrations, it is evident that during certain nights in each spring and fall when the birds are passing in greatest numbers, there will be very many more killed than in the earlier and later days of the flight. We imagine that this was the case in regard to the tower mentioned by "W. N. B."

The tower about which the greatest number of birds were found probably stood directly in the track of certain species, and the time at which they were found in greatest numbers was during the night of the flight.]

THE DIVINING ROD.

THE DIVINING ROD.

I SEE, from Fourst and Stream of May 4, that the "divining rod" matter will not rest. A writer in that number of the paper says in effect that the "foolkiller" should take in hand all those who profess to believe in it. That is right. Let's stir the divining rod men up, and make them speak for themselves. I, for one, cannot say that I velect in the divining rod business, nor can I say that I reject it. There are some things in the world that I do not understand, and this seems to be one of those things. When Franklin first broached his ideas in regard to electricity, there were no doubt a great many people who thought him a fit subject for the "fookliller," so with regard to Watts and Fulion; so with regard to Morse. I have observed so many strange things connected with the subtle forces of nature that I am very slow to cry "fool," "fool" about any new thing that I see or hear of. It has often happened that millions cried "fool," "fool" when the only wise man in the crowd was the solitary one against whom the "fool," "fool" was cried. Thus Copernicus, thus Gallico, taus Columbus, thus even Jesus Christ. There is one sin from which I wish to be saved, and that is, "stoning the prophets." I don't want to be one of that crowd, and if I know myself, I won't be.

In a letter to Forker and Stream on this subject, sometime ago, I mentioned certain remarkable things said to have been performed by a "water witch" living in this city. Today I was fortunate cought to meet him and have a good talk with him. He is an old gentleman, kind and gentle in manner, who has lived in Austin some thirty years. He is a shrewd man of business, irch, and personally highly esteemed, though regarded as somewhat crotchetty at times, and eccentric. He vehemently denied that he was a water witch, but claimed that, by means of a forked switch, he could find subterranean waters, and had often done so to the great joy of his friends, for whom he had performed the service. He related a great many instances of this sort, giving

he had gone five feet deeper, and that the water was now pouring into the well so strongly that he couldn't work in it any more. I found it all so, and the result is, that since then I have had no more trouble on the water question. I have abundance of it, not only for all uses about the house and stables, but also for irrigation when needed. Mr. Smith, with his forked twig, has certainly done me an invaluable service. I would not have dug that well had it not been for him and his forked twig. As for the divining rod business it looks very absurd, but I feel very thankful to it. I will not say that I believe in it, nor will I say that I reject it. Judge Hancock was for several years a prominent member of Congress, and no man ranks higher in Texas that he doss I asked Mr. Smith to let me see with my own eyes soul of his performances with the rod. He took a forked twig, marched down the livery stable in which we were chatther

of Congress, and no man ranks nigher in Texas that he does I asked Mr. Smith to let me see with my own eyes some of his performances with the rod. He took a forked twig, marched down the livery stable in which we were chattley, and when he came to a certain spot the twig bent down was held in his hands. This he did repeatedly, and though I watched him very closely, I could detect nothing that looked like fraud. While the twig was bending downward in Mr. Smith's hands, I took hold of it and felt its downward tendency very strongly.

But in one thing Mr. Smith failed. He said he could find buried treasure with his twig. To test this we buried a few silver dollars in a pile of sand, and asked the old gentlemanto find them. He searched in vain, though he passed several times within a foot or two of the money. But against this failure he had many successes to report, one of which seemed quite remurkable, confirmed by many.

There were several others present when Mr. Smith was experimenting with his rod, and all of us tested it in our own hands, but it would not work for any of us. Thee "witches" seem to be rare birds on the earth. N. A. T. Austin, Texas.

hands, but it would not work for any of us. Thee, "witches" seem to be rare birds on the earth. N. A. T. Austri, Texas.

Nesting of Owls.—East Warcham, Mass., May 20.—12 the Forest and Stream of May 4 "Hawkeye" give usominteresting information about a horned owl's nest sad it contents. While looking for nests in the Northern Nock of Virginia, May 16, "77, my brother and I found one of the horned owl. It was in the top of a very large white-capture, and the limbs included; the trunk broke off about when the owls entered the cavity. This accident left their nest uncovered. It contained two fully-fledged young, which could be seen from the foot of the tree. How to get at they was the question. They were up some twenty feet from the ground and the stub was three feet through. A follen pix solved the problem and formed a ladder, by which my brother climbed to the nest. Gun in hand I mounted the fallen log to protect him from the old birds, which were sweeping about with ommous hoots. Just as he reached the top one of them swooped at him with an angry whoop. Its and will be supported the fallen log to protect him from the old birds, which were sweeping about with ommous hoots. Just as he reached the top one of them swooped at him with an angry whoop. Its and will present a lively controversy, during which my skil as a wing shot and his courage were tool for the fallen log that the problem of the dependent of the defensive—back down, feet presented and bill presented in an unpleasant manner. The cavity contained an accumulation of rotten wood, leave most and other debris which together made up the sea There were two legs of a rabbit and one of a woodcock in it. Hawkeye' asks, "Do not owns usually eat up the bodi of their prey?" A tame one that we had did, and ate ging bread too. He was a small one (Seops asio), and when cauge could fly but a few yards. We kept him at a house by the sort of the province of the was anchored. He was a household pet as long as he lived. Once he was lost, as two days after, hearing a great

Index escribed to years, and this spring security in horned owl's eggs.

Inter Hoop Snake.—New York.—I find in your last issue mong the Answers to Correspondents that you say there in o such thing as a "hoop snake which can take its tall interesting the properties of the superstition before the same in the says." The hoop snake is a figment of the inagination dwelling only in the innermost recesses and unfattoward abysess of the superstition-beforged minds of granules as simpletons," This sentence staggers me somewhat, and or reading it I pinched my arm to see if I was fully awale reading it I pinched my arm to see if I was fully awale feel certain that I am not a "granny," but am not so suce the "simpleton" charge. Persons cannot well judge of the superstition before the same than the same in the same than the same posses, for all simpletons, lunatics and creaks the may posses, for all simpletons, lunatics and creaks the themselves perfectly sane. But to the snake. When selson has a thing in possession, and a great authority of Forest and Stream tells them that it does not exist, her is but one course left to pursue, and that is to bring by proof. Therefore if the snake editor of your great judged will do me the honor to call at the address inclosed I we take great pleasure in exhibiting the serp int to him. That of course, Forest and Stream will, like all entiplements on the source of the santy for the snake is not living—texast P, S.—I forgot to mention that it holds its tail permanent in its mouth, from which it is, however, easily removed.

Reffed on Ruffled?—Seneca Falls, N. Y., May 1882.—Editor Forest and Stream: Is the name "infigrouse" derived from its habit of raising the neek tests (or Elizabethan "ruff"), or from its unique sound of an ory challenge? Chambers' Enclyclopedia defines "ruff as "a low vibrating sound less loud than the roll produces by drummers." The nomencluture prolably arises from the proculiarity, but, to say the least, there is certainly singular etymological coincidence.—E. R. Witcox, "If ame undoubtedly comes from the ruff-like neck restaction the coincidence suggested by our correspondent is a tainly curious and interesting.]

AY ALBINO SURF DUCK.—A white duck of one of the three species of sea ducks known along the New England coast as "coots," was recently seen at Scarboro, and sought for by-the guiners. It was finally shot May 6 by George E. Cishman, of Cape Elizabeth. The bird proved to be a "patch-lead coot" or surf duck (Ellzama psrspicillata of modern authors). The bill, feet and eyes were of normal color; the plumage pure white, excepting patches of black under the wings, upon each cheek, and some black feathers upon the lower parts.—EVERETT SMITH (Portland, Me., May 9).

The Wild Turkey.—We understand that Audubon's large oil painting of "The Wild Turkey" is now for sale. This superb work represents a male, female and brood, and was regarded by the naturalist as one of his best paintings. The companion piece to this painting, "The Scotch Grouse," was sold some years since to Mr. Frederick De Peyster. The picture can be seen at 32 West Fortieth street, New York.

Brown Thrushes on Broadway.—New York, May 22.

—A day or so ago, as I was walking on Broadway, I saw a nown thrush (**Larporhynchus rufus**) fall fluttering to the pavement exhausted. I am quite certain it was wild, as I examined it in the hands of the man that caught it.—A. T. Gessner.

Game Bag and Gun.

TIT

Compleat Marksman:

O R

The TRUE ART

OF

SHOOTING - FLYING:

A

POEM.

By the Hon. Robert Coote, Efq;

Ye rural Sportsmen lend an ear, Atlend my Song, my Precepts hear; Such ample Rules I here impart, You'll learn with Ease the Shooting-Art.

LONDON.

ТНЕ

Compleat Marksman.

YE rural Sportsmen lend an ear,
Attend my Song, my Precepts hear;
When Love, and Sleep, have crown'd the Night,
Arife from Slumber with the Light;
When Eaftern Streaks their Beams display,
Arife, be clad, and hafte away.

A fporting ne'er prefume to come, Without a little Cordial Rum; A proper Wicker-Bottle fill, That will contain about a Gill. If fick a Gulp will make you well; Twill keep out Air, the Wind expel; And, fhould the Gripes, or Cholic feize ye, A little Dram will quickly eafe ye; Or, if your Spirits fail, a Dram Adds Vigour to purfue the Game.

But, let your prudent Care be fuch, As not to drink a Gulp too much:
A Sup is good to keep you warm,
A Sup too much will do you Harm:
For, if a Dram too much you take,
It will your Sight unfleady make;
Twill blunt your Eyes, and fpoil your Aim,
And then, my Friend, farewell the Game!
A Morning-Sot, without Difpute,
Can never aim, though he may thoot.

The Markiman should the Bottle spare, At least, of all Excess beware; If you a Dram unwifely take, Some statl Step perhaps you'll make: The Turkies slay, the Goese destroy; In Mischief all the Day employ.

Procure your Tackle, Gun, and all,
And then your cheerful Pointers call;
But, prithee, don't forget to bring
Into the Field, a Partridge-Wing;
And having cleans'd with utmoft Care,
The Touch-Hole from the Duft and Smear,
Proceed to charge, and Prime the Gun;
(This muft not Over-Night be done,
For, if 'tis loaded Over-Night,
The Prime will hifs, and not be right.)
Prime not too full, 'twill merit Blame;

The hanging Fire will spoil your Aim: The Reason is, if I must tell, The Pressure does the Flame repel.

In Charging, those who most excell,
Take care to ram the Powder well;
But then, it must not be forgot,
To ram, with Tenderness, the Shot:
One Third of Nitrous Dust will do,
And take of Shot the other Two:
Then search for Tow, the Whole to close,
The fittest Thing that can be chose.

Be careful to observe my Hints, Provide a Turn-screw, Worm, and Flints; For though no Accidents arise, To guard against them, must be wise.

For who would venture o'er a Den Of Rogues, and Thieves, and Highwaymen, Without a Weapon of Defence? The Answer's plain,—No Man of Sense.

Perhaps the Reader may object, And fay, he might not be attack'd; I grant it true; but if he fhould, The Weapons then might do him good; And if you thus for Chance prepare, You may your Accidents repair.

When thus equipp'd, your Sport purfue, Regardlefs of the Dirt or Dew:
The loit'ring fool fhould keep in Bed, And there repofe his drowfy Head:
Let pamper'd Mortals flay at Home,
Such Wretches are unfit to come.
Whoever fails in any Part,
Can ne'er be Mafter of the Art.

Not eager, or without Concern; A Medium in your Actions learn: A Medium in your Actions learn: Be fure Take Time,—the chiefeft Rule, That's practic'd in the Markfman's School; Moft giddly Youths the Sport confound, By firing on improper Ground.

True Sportsmen Stoic-like should be Quite easy, unconcern'd, and free, Not eager firing off at Random, Or let a tim'rous Fear command 'em.

Suppofe me going with a Friend,
In rural Sports, the Day to fpend;
Suppofe we faw a Feafant (prung,
His flutt'ring Wings the Vaileys rung!
Behold he mounts!—take Aim and Fire!—
Well done!—You've granted my Defire!—
He's down!—Well done! I do declare,
You've done your Business to a Hair.—
Quick, quick!—Recharge! don't let it reft!
And to your Dogs repose the reft,
Recharge! before the Air gets in!
To loiter is a Shame and Sin;
The Barrel will the Powder heat,
And make the Charge the more complete;
The Touch-hole too, if Hoste you make,
More freely will the Powder take.

Some, unacquainted with the Art, Will fall to cleanfing every Part, Until the Piece has loft its Heat, And there fucceeds a clammy Sweat.

And if the Bird be flightly touch'd,
And down the fits most flily couch'd,
When you the Victim go to take,
She may a fecond Effort make,
And foar with broken Flight away,
While you lament th' escaping Prey:
For Feafants very often rife,
And mount, with waddling Flight, the Skies.
A Bird, that I've concluded flain,
I've often feen to rife again,
And to fome diftant cover fly,
To droop, and agonizing die.

Woodcocks, and Snites escape but rare, When in the Wing they wounded are; But Feasants very seldom lie, With mortal Wounds they often fly.

A Partridge sprung, Sir, IIa!—she's gone!
You'd Time enough!—you shot too soon!
Not Twenty Yards in Sight—for Shame!
You don't deserve a Marksman's Name!—
You'd maul'd her with a proper Aim!
Permit her Forty Yards to go,
The Gun will furer Mischief sow:
But when too near, the Case is this;
You either mangle her, or mis.
And if too sar you slightly wound,
Nor make the Game descend to Ground:
In shooting all Extremes resuse;
Take my Advice, a Medium choose.

But when the Trees confound the Scene, You cannot keep the Golden Mean; When Woodcocks dodge, we know no Laws, Necessity admits no Pause.

In Erfh of Barley, Oats or Wheat, Where charming Quail, and Partridge fit, Or in the Springs, where lovely Snite, Will bore, to pleafe their Appetite; Or where the Polt in Open Heath, Moves in an even Line from Death; There, if the p'ece be fully prov'd, Purfue the Mark when far remov'd; Raife up the Mouth above the Game, And fire away, with carreful Aim. But judge before you execute; Take Aim, and not at Random shoot,

The Cock is indirect in flight, Like rapid Lightning flies the Snite, 'Till diftance overcomes her Fright, Then firaight along they gently fly,
And flightly wounded, fall, and lie.
By Length and Motion of their Wings,
(Which are fuch long, fuch cumb'rous Things)
So eafy maim'd, when Twenty fall,
Perhaps none dead amongft them all,

When Snites receive a mortal Wound, With steady Wings they skim around; Expanded open like a Kite, They smoothly swim 'till spent in Flight; And where there sall fans Motion lie, And seldom move, but silent die.

The gen'ral flying Marks are Five, By those who to Perfection dive: Observe, of Lneals, Two there are; A Traverse and a Circular; The Fish Oblique, which none can teach, But Practice, Persectness can reach.

When Birds fly onward to your Face, Stand ftill awhile, and let them pass; Unless some Trees behind you stand; Then manage with a careful Hand; Advance the Mouth above her Head, And Ten to One you strike her dead.

When Birds fly from you in a Line, With Care, I may pronounce them thine; Obferve with Skill, to raife your Piece, 'Till there's no open under Space, Betwixt the Obj 'ct and the Sight, Then fire away, and ftop her Flight.

Now I've the Lineal Mark display'd, You stand in Need of surther Aid; The Travesse next employs my Pen, Not understood by many Men.

The Traverfe Crofs-Mark Skill requires:—
I've often heard your Country 'Squires,
I've often heard your Country 'Squires,
Suftain a very high Difpute.
Before the Bird, fome always fire,
But that will niceft time require;
For fhould you too much Space admit,
The Shot will fly too quick to hit;
And if you give too ittle Space,
That's full as hazardous a Cafe.

The Partridge, flying fwift as Wind, Will dart, and bilk her Death behind, Which makes it difficult to guefs;— Your Time muft be exact, or mifs.

If you will my Instructions take, You need not such strict Measures make, Or take such wond rous Pains, and Care; And stand a surer Chance by sar.

Observe, that ev'ry skilful Spark, Will strive to gain a Lineal Mark; Which better will Eight Feet allow, Than will the Cross-Mark, Inches two.

When Forty Yards to Left, or Fight, The rapid Partridge steers her Flight; Have at her with a fideling Line, I make no doubt that she'll be thine: But just behind, the Shot will glance, And, if you kill, 'tis all a Chance.

The Mark which Circular is term'd, With fleady Care muft be perform'd. Attend the Motion of the Bird, 'Till fhe a proper Mark afford; Obtain with Skill, and cautious Scan, The furtheft Lineal Point you can; With Patience, move your Piece around, 'Till you a proper Aim have found, Then fire! and bring her to the Ground.

See Jewel stands!—a Covey!—stay!
And have Regard to what I fay:
When featt'ring Birds in Numbers rife,
And various Marks confound the Eyes,
Be sure confine your Aim to One,
Regarding none but That alone,
Experienc'd Men of One make sure,
And rest content with One secure:
The scatter'd Covey, if you wait,
May yet be your's by suture Fate,

Young giddy Fools, who vainly hope, By Chance, to pick a Number up, Do often find themfelves deceiv'd, And wifth the random Fire retriev'd; Tho' many they may flightly wound, They'll fee none bounding on the Ground.

Come on, my Friend, the fultry Morn, Draws forth the Coveys from the Corn; Or elfe fome Numbers may be found, In fertile Fields, the Wheat around, Sitting ftill to tafte the Sun, Or, clucking to fome Coppice run, To fpurn the Duft, and wafte the Noon; Some let us kill, and fome difperfe, And eat our Gains, while Setters curfe.

When what the golden Harveft yields, Is carried from the fertil Fields, The Farmer's roomy Barn to crack, And lufty Roger, Tom, and Jack, With furdy Blows are heard to heat, Their Oats and Barley, Peafe and Wheat. When Leazers give their Gleaning o'er, And pauper'd Earth affords no more; When Birds are all become to fly, At ev'ry little Noife to fly; At Eve, foon after Phœbus' Fall, You'll hear the Partridge fereaking Call, The (o eys fe-k their Place of Reft, And fly towards their humble Neft: The old Ones call their Young, to come, And with their careful Dams go home:

Look sharply at the Close of Day, You'll see these Kinssolk skim away: Observe their Flight, with steady Care; Mark well the Place where they repair; Which in the Morning will assort, A Bauquet for the next Day's Board.

But in the Brightnefs of the Day, They basking in the Hedges lay; The glorious Sun's Meridian Heat, Makes that a charming fweet Retreat Securely there, they basking fit, Nor will they such dear Mansions quit, Unless some Noite, or Voice they hear, And then with Speed away they steer.

Be careful; let your Steps be light. For ev'ry trifling Noife will fright: Except the Quail which lies fo clofe, She'll near endure the Lurcher's Nofe. With Patience hunt; the charming Prey, Will amply your Attendance pay: Her Flights are floort, observe her Fall, You'll fpring her Twice, no Doubt at all.

When stiffen'd Earth by Frost is bound And slocking Larks bestrew the Ground, The Cold assorber mysterious Meat, Best nours'in'd when they little eat. The ambient Air their Pores constrains, And friendly Cold shuts up the Veins; From hence the Nutriment proceeds, And ev'ry Grain some Fatness breeds.

But when bright Sol difplays his Heat, They poorer grow, tho' more they eat; For in one melting, fultry Day, Their fatness all perspires away.

To fire at Flocks, take proper Care, And thus your well-prov'd Gun prepare; Obferving to difpofe your Charge, As may difpenfe the Shot at large. Of Powder take an equal Lot, As you allow of circling Shot; Defruction then will featt'ring take, And many bleeding Victims make.

When thus prepar'd, begin to ftorm, And fire amidft the rifing Swarm, And treble Slaughter you'll perform. When Birds expansive rife in Air, The Mark lies open, raif'd and fair, And Ten Times more will dead be found, Than if you shoot them on the Ground.

If you a Mallard chance to fee, Attend, and be advif'd by me: If you're before him, hold your Arm, His guarded Breaft no Shot can harm; And fire behind, where, lefs fecure, He can the piercing Shot endure.

When rattling Winds do brifkly blow, Snites move against the Wind but slow; And they're so thinly clad behind, They seldom travel with the Wind, To guard against inclement Air, The Part which is so very bare.

The Woodcocks then fhort Flights will take, And Feafants to the Trees will make: Then fright them from their Boughs away, And foorn to fhoot the gazing Prey: Poachers alone that Crime commit, 'Tis fcorn'd by Men of Senfe and Wit.

When stormy Winds offend the Skies, You cannot hear the Partridge rife; It drives the Powder in your Face, And really that's a dang rous Cafe.

And if, my Friend, it chance to rain, Take my Advice, go home again, That Day no farther Sport affords; Farewell the Fields! Adieu the Birds! The Powder gives, and Damp will grow, Take my Advice then; prithee go: For should you stay, I'm fure your Gains, Will never pay for Half your Pains!—The Sport is o'er! Away! Away! For now 'tis all in vain to stay.

Then o'er a Bowl or Tub of Ale, Relate a merry ufeful Tale; But ne'er without a jovial Soul, That loves the Sucking of a Bowl. And bid the Youths around, beware, To ufe the dang rous Gun with Care: And let your Sons the

A blooming Youth, or rather Boy, The Father's only Child and Joy, Intent to make the Larks his Prey, Himfelf as innocent as they; The Powder, in the Porch of Death, In vain difeharg'd its Flash of Breath. The curious Youth defir'd to know, Whether the Piece was charg'd, or no, And at the Mouth began to blow; A dreadful Kifel for now the Bane, Had bor'd a Paffage thro' the Train; It shot his Skull, and dash'd his Brains, With Fury, all about the Plains.

Once more, let me entreat the Youth, To liften to an ufeful Truth.

As through fome Brambles mix'd with Brake, Young Colin did his Paffage make, Againft a Sprig, the Cock he drew; It fir'd, and thus himfelf he flew.

Unguarded Swains, remember this, And to your Shoulders keep your Piece; Nor on Uncertainties rely,

The Gun remov'd may after fly: When having but a fmall Command, The Piece will fly from out your Hand; And you perhaps may Pains endure, Which Doctor's Arts can never cure.

Forgive me if I yet detain, And tire you with this Tragic Strain; For mine's the Labour, your's the Gain.

Next Hammer'd Flints, tho' much in Use Do various Accidents produce;
The Sparks into the Pan may fall,
And make the fatal Piece recoil:
The Muzzle, pointed at a Friend,
May foon unthought Destruction fend;
The Cock may at Half Bent go down;
True Sportsmen therefore mount the Gun:
And walk with Flint reftrain'd by Thumb,
Lest fome unthought Misfortunes come;
But this unheeded is by some. Next Hammer'd Flints, tho' much in Ufe,

Such fad and dire Events have been, Such fatal Strokes in ev'ry Scene, That really I could not forberr, To caution and alarm your Care.

Sportsmen adieu! my Words observe. And I, at least, your Thanks deserve.

MAJOR JOSEPH VERITY.

SOME OF HIS SPORTING ADVENTURES, AS MODESTLY SET FORTH BY HIS OWN PEN.

CHAP. IV.

THERE are certain elevated districts of Adironda, where in midwinter the cold is so intense that it is only equalled by that of the Arctic regions. It was once my bad fortune to be caught there at that season, through the too arduous and foolhardy pursuit of a band of moose, which my companion and I followed into the upper fastnesses of the mountains. We first realized the severity of the cold when we found that the food which we carried had become so frozen that we could not gnaw off enough of it to at all satisfy our hunger. Having each taken a draw from our flasks, in which the strong liquor was almost frozen, we presently heard a musical jingling proceeding apparently from our inner selves. It was the ice crystals of the congealing spirits tinkling in our stomachs. We succeeded in building a fire, and tried to cook, or at least thaw, some of our provisions. It seems incredible, but the blaze actually froze to the bottom of our camp kettle, so that when we tried to take it off, kettle, blaze and firewood all came off in a lump, and we had to chop the kettle free from the blaze, which I well remember noticing, although I was in such peril, was one of the most beautiful objects I ever beheld. In this strait of suffering I bethought me of a bottle of the oil of the furry bear, which I had taken with me to oil my gun barrels, and at once rubbed some of it on my own and my companion's bodies. It was not long before the fur began to sprout all over our skins, and in a few hours we had a better protection from cold than any artificial covering could afford. Then putting some generous pieces of the congealed fire (which ceased not to give forth heat) in our pockets, we were enabled to make our way to a less rigorous region. The coating of hair which the bear's grease had produced was for a long time very vexatious, till at last we were relieved by the use of Prof. Blank's Hair Eradicator, which I understand is distilled from the hairless tails of rats and opossums. I know a man who tasted this bear's grease, as some

CHAP. V.

grease, as some people must always be tasting everything, and was obliged for years to shave his tongue.

CHAP. V.

In a certain place where I used to hunt in Adironda, I was told that monkeys had been seen, but never believed it till one day I actually beheld one swinging himself from tree to tree, and following him stealthily I saw him disappear in a great chasm. Coming to the edge of this and looking down it, I saw the dark blue sky of the other side of the world through the bottom of it, with the stars shiming in it, it then being the night of our antipodes. Then I knew how the monkeys had been able to appear in so unusual a place.

But of all the strange things which I ever discovered in this wonderful region, which has furnished so many miraculous takes of tourists and hunters, nothing exceeds a certain spring which I once found there. I was still-hunting, and my course lay up a stream which came down from the mountains. When I struck it it was quite large, indeed almost a river, but as I followed it up it grew unaccountably smaller, though it had no tributary brooks anywhere. At last I reached the fountain head, where in a slow trickle a small stream came occaing out of the rocks, something as molasses comes from a tap in cold weather. I tasted it and found it delicious, and then being thirsty with my long tramp, took my fill of it and filled my flask with it. I then went on my way, but had not gone far before I began to feel an overpowering fullness so that it seemed as if I must burst. When it had become almost insupportable, the water began to spurt from every prore in my body in little jets, as well as in torrents from my mouth, nose and ears. I must have resembled one of the new-fangled lawn sprinklers now in fashion. I was very much alarmed, but soon began to feel relieved, and the strange exudation at last ceased. Knowing that it was the water of the spring which had caused my painful experience, I said to myself I would have no more of the vile stuff, and taking out my flask emptied it upon the g

suddenly brought within my grasp by this strange discovery of which I was determined to make the most. Next mora ing as soon as I had eaten my breakfast, and washed it dow, with a copious drop of the wonderful essence of water I started for the spring with a couple of jugs, intending in fill them and take them down to the settlement for exhibition. All that day and all the next, and for many another is searched for that wondrous fountain, but in vain. I neva found it, and to-day, except in memory, it is as unknown to me as if it had never existed.

[Editor Forest and Stream: A desire to have my narrations as accurate as they are truthful, impels me to call your attention to an error in your issue of the 25th ult., which makes me say that "I was somewhat compensated for the loss of the first" (the great salmon) "by finding find there so gorged upon his carcass that I captured them a easily as one would pick up a nest of young field mice." It should read "five otters." As it stands, it might appear to some that I had made an untruthful, or at least a ridius lous statement, as it is well known that the salmon, though devouring the spawn and fry of its kind, never, as man does preys upon its grown-up brethren. With highest esteem a ma sever, yours truthfully, Joseph Vernty.]

THE ILLINOIS ASSOCIATION.

THE ILLINOIS ASSOCIATION.

THE ninth annual meeting of the Illinois Association convened at Chicago Tuesday of last week, the clubs represented being the Audubon Club, Chicago; Shooting Club, Chicago; Cumberland Gun Club, Chicago; Audubon Club, Chicago; Cumberland Gun Club, Chicago; Audubon Club, Cago; Blue Island Gun Club, Blue Island; Geneseo Sportsmen's Club, Geneseo; First Lee County Club, Franklin Grove Lake George Sportsmen's Lub, Chicago; Maks-saw-Ba Club, Chicago; Maple City Club, Geneseo; South Bend Shooting Club, Chicago; Sportsmen's Association, Wyoming, Club, Chicago; Sportsmen's Association, Wyoming, Club, Chicago; Wyoming Sportsmen's Association, Wyoming, Delavan Prairie Club, Delavan; Sportsmen's Club, Evanston, Glencoe Gun Club, Glencoe; Northwestern Gun Club, Evanston; Rock Island Gun Club, Rock Island; Galesburg; Peoria Shooting Club, Peor.a.

The president, Dr. F. B. Norsom, presided; and in his address congratulated the association upon its prosperous condition and progress. He deprecated the attempt of Mr. Henry Bergh to suppress pigeon shooting on the score of its cruelty; and hoped that Illinois might not be troubled by any such vexatious laws on the subject as had been proposed for New-York.

Mr. C. E. Felton offered the following resolution, which

cruelty; and hoped that Illinois might not be troubled by any such vexatious laws on the subject as had been proposed for New York.

Mr. C. E. Felton offered the following resolution, which was passed by a unanimous vote:

"Resolved, That the president appoint a committee of five members of the association to confer with a like committee from the game dealers of this city with a view of ascertaining what other legislation, if any, is required for the purpose of harmonizing all interests to further the protection of game. Said committee shall have full power in the premises; and if, in their opinion, they deem it best that any changes be made in the present law, on the recommendation of a majority of this committee the Law Committee of this association shall adopt a new game law, or such amendments to the present law as may be recommended, and present the same at the next meeting of the General Assembly of this State and secure the passage of the same."

A resolution was introduced by Mr. J. A. Sexton, endorsing the Post bill now before Congress for the protection of large game, and this resolution was adopted.

It was decided to hold the next annual meeting at Chicago. The election of officers resulted as follows:

President, Charles E. Felton, of Chicago; first vice-president, D. G. Cunningham, of Delavan; second vice-president, A. W. Bruner, of Rock Island; secretary, G. T. Farmer, of Chicago; treasurer, Col. E. S. Bond, of Chicago.

The convention then adjourned **me die*.

RAIL, NOT "QUAIL."—Philadelphia, June 4.—Editor Forest and Stream: In one of your late issues "Mos-Ambique" very properly expresses surprise and indignation that a citizen of Ohio, Mr. A. McC. Wilson, should kill (his share of) ninety quail in May, and then print in the Field and Stream department of the Cincinnati Commercial the fact (?) that he had done so. "Mos-Ambique" read the article all right, but the article was all wrong; for Mr. Wilson killed no quail, nor did he say that he had done so. I saw his letter before it went to the Commercial, and his remark was that "he and two others had killed ninety rail." His writing was quite legible too. It is simply one of those unaccountable typographical errors that will occur sometimes, and thereby annoy innocent parties. In this case the printer and the profereder will probably desire to share the blame for the substitution of "quail" when Mr. W. said "rail."—W. McK. Heath.

"The Charmed White Deer,"—Escanaba, Mich.—I see in your issue of May 11, under the head of "Charmed White Deer," the writer makes Mr. Westfall say that all white deer are does. Mr. Henry Lush killed a white buck on the Whitefish River in the winter of 1876. He sold is in Chicago soon after. The Indian says, "No kill any more white deer king."—F. A. Y.

Оню.—Sunday, May 21st, we moored some twelve of fifteen woodcocks. Young birds seemed to be fully as large as the old ones.—С.

LOCKED HORNS.—We have received from Mr. B. M. Campbell, of Summit, Mississippi, two pairs of antlers of the Virginia deer, firmly locked together. The horns have been lying out in the weather for a long time, and are bleached and whitened, and the points gnawed by rodents. The anterior portion of each skull has crumbled away, and in a few years more there would have been nothing left to tell the story of the combat that ended so tragically for both of the participants. The horns are a most interesting relic, and we shall value them highly.

Transferring fish.—Persons interested in transferring fish from one pond to another will be interested in the account of how the Texas Fish Commissioner did it by means of syphons, as reported in our fisheultural department. Our informant tells us that this was his first experiment in transferring fish in this manner, and adds: "it worked like a charm."

New York GAME LAW,—The Newman bill to amend the New York game law was passed, and is now in the hands of the Governor. We have already given an outline of its provisions

Sea and Biver Mishing.

FISH IN SEASON IN JUNE.

PRIER

Brook trout, Salvelinus fortinalis.
Grayling, Thymallus tricolor and
T. montanus.
Rainbow trout, Salmo iridea.
Clark's trout, Salmo clarkis.
Dolly Varden trout, Salvelinus
malina.

madma, Micropterus, Especies.
Black bass, Micropterus, Especies.
Maskinonge, Esox nobilior.
Pike (N. Y. pickerel), Esox lucius.
Pikesperch (Wall-eyed pike) SMxostethium.

BALT WATER

Yellow perch, Perca fluviatilis.
Striped bass (Rockfish), Roccus
lineatus.
White bass, Roccus chrysops.
Rock bass, Ambioplites, two spe

cies. War-mouth, Chanobryttus gulo-

crappie (Strawberry bass, etc.), Pomoxys nicromaculatus. Bachelor, Pomoxys annularis. Chub, Semotilus bullaris.

Sea bass, Centropristes atrarius.
Striped bass, Roccus tineatus.
White perch, Moroneamericana.
Soup or porgie, Stenotomus arsyrops.

Kealdah or squetague, CynosWealdah or squetague, Cynostis,
Bluefish or taylor, Pomatomus
saltatrix.
Weakfish or squetague, Cynoscyon regalis.

O, sir, doubt not but that angling is an art; is it not an art to deceive a front with an artificial fly? a front; that is more sharp-sighted than any hawk you have named, and more watchful and timorus than your high-mettled merlin is bold? and vet I doubt not to catch a brace or two to-morrow for a friend's breakfast. Doubt not, therefore, sir, but that angling is an art, and an art worth your learning; the question is rather, whether you be capable of learning if? for angling is somewhat like poetry, men are to be born so: I mean, with inclinations to it, though both may be heightened by discourse and practice; but he that hopes to be a good angler must not only bring an inquiring, searching, observing wit, but he must bring a large measure of hope and patience, and a love and propensity to the art itself; but having once got and practiced it, then doubt not but angling will prove to be so pleasant, that it will prove to be like ard to itself .- IZAAR WALTON,

VIVIPAROUS FISHES.

VIVIPAROUS FISHES.

THAT there are certain fishes, Embiotocides, on the Pacific const which bring forth their young alive, and are popularly known as "viviparous perch," is well known. It is not so well known, outside of the students of ichthyology, that there are certain fishes on the Atlantic coast which have this habit. Nevertheless it is true that many of the members of the family Cyprinodontides are viviparous.

The cyprinodonts are, as the name implies, a sort of cyprinoid, or soft-finned carp-like fish, which have teeth, and their small size prevents their becoming very well known to the angler. The little fishes whereof we write are from an inch to four inches in length, and are common along the Atlantic scaboard, and in the streams flowing into the sea. They are fond of brackish water, and are sometimes found in water entirely fresh. They are divided into about twenty genera and over a hundred species. They are popularly known about New York as "killyfish," from the Dutch name of "kill," meaning creek; in Connecticut and East they are called "mummichogs," probably an Indian name, which is often shortened into "mummies." Some of the genera are called in other localities, according to Jordan, "Mayfishes," "stud fishes," "stop-minnows," from their habit of feeding near the surface, and they doubtless have other local names.

Only a few members of this family are viviparous, the remainder having the habit of laying the eggs before they are hatched, but the larger portion bring forth their young alive. They may be distinguished by their soft fins, a single dorsal usually placed far back, head covered with scales, and teeth noth jaws. The males of those which are viviparous have the anal fin modified into a sort of sword-shaped intromittent organ. The fact that these members of the family copulate was first called to our attention in 1875, while hatching shad

iney may be distinguished by their soft fins, a single dorsal usually placed far back, head covered with scales, and teeth in both jaws. The males of those which are viviparous have the anal fin modified into a sort of sword-shaped intromittent organ. The fact that these members of the family copulate was first called to our attention in 1875, while hatching shad upon the Pamunky River, Virginia. We saw the fish come in with the tide and approach the shore so closely that they lay upon their sides and plainly saw the operation. Upon going to Washington and relating the fact to Professor Gill he told us that this had long been known, and brought down a dusty volume wherein it was described. Last month we received a few specimens (all females), which were in a gravid condition, from Hon. Thomas Y. Aby, of Louisiana, and from one of which we took 101 young ones and about a dozen undeveloped eggs. Mr. Aby was not aware that the fish had received attention from naturalists or other persons. We wrote him for the name which is applied to them in his district by the people, and were informed that the only one he knew was "pot-guts," and that they inhabited indifferently stagnant pools and running streams, and were often seen on the surface of the water.

A friend of Mr. Aby's, Dr. John Calderwood, who writes us from the Ouachita River, Louisiana, says:

Your letter acknowledging receipt of a certain viviparous fish sent you by my friend Dr. Aby, has been referred to me to answer. I regret that my knowledge is so very limited. Such as I could get, after dilligent inquiry from all whom I knew would be best able to supply the information you desire, I herewith give you, first, as to the various names by which it is known among the natives: The most common are "potgut minnows," "top-water minnows," The first name evidently is due to the great prominence of the addomen when in the gravid state. The other two from the fact that it is a surface swimmer. I have also known it to be called the "bullhead minnow," by reason of the

When they are found in stagnant overflows or ponds it is the result of accident, having been left there by retiring of accident, having been

To my inquiries as to whether it had a particular breeding To my inquiries as to whether it had a particular breeding time, the answer was that it had been and could be seen in the gravid state at all seasons of the year. I could not learn how many young they generally brought forth at a litter, nor how many litters they produced in a year. It is, however, easy to be seen that it is a very prolific fish, and the fact that they are seen in gravid state at all times of the year would lead to the belief that they drop successive litters throughout the year.

SALMON FISHING.

J HAD lived more than sixty years before I ever saw a salmon, except in a fish market. Much I had read about this noble fish in the writings of Scott, Wilson, Scrope, Davy and others, who estimate the killing of a salmon with the fly as the greatest exploit of the angler. Most of the other game fishes of the United States I had taken, but in my younger days it was generally believed that the salmen of American rivers would not take a fly, and those anglers who had the time and money used to go to Scotland for their sport.

In 1872 I was invited to join a party who were going to fish the upper peopls of the firest.

their sport.

In 1872 I was invited to join a party who were going to fish the upper pools of the Restigouche, one of the finest salmon rivers in the Dominion of Canada. It forms the boundary between New Brunswick and Quebec, and flows into the head of the Bay of Chulheurs. Here we camped in the wilderness. Three days I spent in a bark canoe with two Indians—one in the stern with a paddle, the other in the bow with a setting pole—without bringing home a fish. This is a much easier way of fishing for salmon than that practised in Scotland and Norway, where the angler casts from the shore, and is obliged to follow his fish along the bank wherever it may lead him, often to wade waist deep in a heavy current, sometimes to swim. In a canoe, when your fish makes long runs, the canoe follows him, when he goes to the bottom and stops—"salks" is the name for this trick of the salmon—the Indians start it with a pole or throw stones at it. Keeping the fish always on the move, even a salmon will tire itself out in time, although apparently made of India rubber and mounted on steel springs. For the novice, however, it is not an easy matter to sit upon the thwart of a bark canoe, nuch less to handle a sixteen-foot rod on that eminence, which seems as unsubstantial as an egg-shell, and he feels much like a person who is for the first time on horseback. I fortunately had served my apprenticeship in this vessel during many excursions in the Northweet efter trunt and black bass and could eit my

rod on that eminence, which seems as unsubstantial as an egg-shell, and he feels much like a person who is for the first time on horseback. I fortunately had served my apprenticeship in this vessel during many excursions in the Northwest after trout and black bass, and could sit my cance with the ease of an old rider.

Three days I passed upon the river, casting the fly, not wholly without success, as I could often raise my fish, and sometimes hook them; but they always escaped, either by unhooking themselves in their frantic leaps, or taking away hook, with more or less of my line. I found the salmon only in the pools, where they were resting from their laborious journey up the river to the spawning beds. They usually took the fly beneath the surface: as I cast down stream, the current took the line away, and the strike came generally as I withdrew the fly preparatory to another cast. When hooked, the fish made a swift run down stream of thirty or forty yards, and then leaped clear of the water four or five feet; then off again for a longer run unless they got clear in the first jump, as often happened with a novice, who had not as strong fish run out my whole line of 100 yards, and break loose with the hook. So I found that 150 yards of line was none too much for a salmon fresh run from the sea.

There were four in our party, and we took in turn the four

none too much for a salmon fresh run from the sea.

There were four in our party, and we took in turn the four pools nearest to the camp. On my fourth day the nearest pool and the best, belonged to me, and I was on it at 7 A. M. I soon hooked a large and vigorous fish, which, after some long runs and lofty leaps, sought the foot of the pool and sulked at bottom in deep water. We could not reach it with

pool and the best, belonged to me, and I was on it at 7 A. M. I soon hooked a large and vigorous fish, which, after some long runs and lofty leaps, sought the foot of the pool and sulked at bottom in deep water. We could not reach it with the pole, and stones did not start it; at the bottom it remained, sawing at the line as if to cut it on the rocks. I used as much force as I dared to start the fish, but he hung to the bottom, and there we sat for half an hour or more. The cook came down from camp to see the contest, and I began to think I should pass the day there, as an old salmon fisher of our party told us he had done. He hooked his fish at 7 A. M., and at 7 P. M. he broke loose, fairly beaten by the fish, if fish it was.

Suddenly up from the bottom came my salmon and off down the river, the reel whizzing as we followed as best we could. Just at the foot of the island where our tents were pitched a heavy rapid extended for a quarter of a mile; down this rushed the salmon, the cance sometimes following, sometimes alongside of him. All control of the fish was lost, and until we reached the foot of the rapid I did not know whether he was still on the hook, but we came through together and the fish started on another run of some hundred yards to the next pool below, where one of our party was then playing a salmon from a cance. My fish then turned and went up stream on the other side of the island, but soon stopped. Said my Indian, "He most done now," and I was glad, for I also was most done; it seemed as if I could not hold the rod much longer. The salmon was now visible through the clear water about thirty or forty feet away on our broadside, three feet long, at least, of burnished silver. His strength was failing, and with difficulty could he keep himself upright. Such was his vitality, however, that for nearly another half hour he resisted my efforts to bring him to gaff. Finally my Indian paddled up to him, I recling in the hounder him and lifted him into the cance, but his last struggle nearly took the

weigh twenty-four pounds, and I retired to my bed to rest my weary limbs.

That evening I went out again and killed a salmon weighing twenty-two pounds in thirty minutes. Such is the difference between two salmon of about the same size. My first fish, however, was an exceptionally strong one, and of about the right size to make a long right. The next day I killed one of twelve pounds and another of three pounds called a grilse; then, having satisfied my ambition in salmon killing, I went of to the river Novelle after large trout, a kind of sport involving less fatigue than these contests with big salmon.

Mr. Francis Francis, the English writer on angling, gives it as his opinion that trout fishing requires more skill than salmon fishing, and I am inclined to agree with him. When salmon are abundant and feeding, it is easy to roise and hook them, the difficulty is to bring them to gaff. There is more excitement, of course, in a contest with a big fish than with a small one, and the sport is much more expensive; so much so that only millionaires, such as railroad officials and mining kings, can follow it habitually. The control of a salmon river, liker the ownership of a yacht, is the sign of wealth, and the investment is often made on that account by become who do not care for fishing or sailing. S. O. O. people who do not care for fishing or sailing. S. O. O.

THE TROUTS OF CALIFORNIA.

BROOKFIELD, W. T., May 12, 1889. '

Editor Forest and Stream : In nearly every number of Forest and Stream I find something about the trout of the Pacific Coast; and as they seem to be but little understood by Eastern sportsmen, per-haps a few words in regard to them may be acceptable. For haps a few words in regard to them may be acceptable. For convenience of description the trout of the coast may be divided into two classes: the red spotted and the black spotted. I think it is now generally admitted by the best authorities that there is only one species of red spotted trout native to the coast, the *Sulvetinus spectabilis or S. malma. It ranges from the Sierra Mountains to Alaska. Of its dozen or more popular names that by which it is known in California, "Dolly Varden," seems the most beautiful and appropriate, and should be generally adopted. Like fontinalls, its near relative, it is fond of cold, swift streams; and in California lendy of the cold of conly found in those that are fed by glaciers. It resembles in Eastern relative in habits and character; the important differences being its greater size, it reaching a weight of fifteen pounds or more; its longer, more cylindrical figure; the back and head being spotted as well as the sides; and the absence upon the head and back of the irregular mottled lines of fontinalia.

upon the head and back of the irregular mottled lines of fontinalis.

How many species of black spotted trout there are is yet an open question. Prof. Jordan says two or three, which he names as follows: First—Salwo clarkii, the most widely distributed of all; found nearly everywhere west of the Rocky Mountains. This is quite a variable species, but there is one constant character by which it can be easily distinguished from the others: that is the fineness of its scales. Counted in a longitudinal series, it has from 160 to 180. Second—Salmo irideus, found in California and Oregon, west of the Sierra Nevada and Cascade ranges. This is a coarse scaled species, having only about 130 rows. Third—Salmo gardnerii, the common "steelhead" of the Columbia. This does not differ in any respect from the preceding except in size, and may be the adult of that species. Although all black-spotted trout are rainbow trout, whenever I see rainbow mentioned in Eastern papers I suppose that S. clarkii is the species meant; and that it is of this species that Eastern sportsmen and fish culturists wish to learn. To begin then: this is a partly migratory species; but the number that migrate to the sea, and the size at which they go, seems to depend upon the size of the stream and its distance from the ocean. Here, thirty miles from salt water, nearly all fish worth catching will be absent from the least of May to the first of August. I say nearly all, for a few will remain, their number and size depending upon the size of the stream; the larger streams being sometimes fairly stocked, while the small ones are absolutely emoty of fish.

remain, ther immore and size depending upon the size of the stream; the larger streams being sometimes fairly stocked, while the small ones are absolutely empty of fish. As you recede from the coset this habit is less marked, though it exists to a less degree as much as two or three hundred miles inland. Its spawning time is greatly extended, being from December to the following June; the largest fish spawning latest. They spawn in the mountain streams.

largest fish spawning latest. They spawn in the mountain streams.

Those that have passed the summer in the streams are called mountain trout; those that return from the sea from August to November, being bright and silvery from contact with salt water, are called salmon trout, providing they do not weigh over three or four pounds, for people here insist upon calling the very large oues (from five to twenty-five or thirty pounds) steelheads, though the true steelhead is quite a different fish. In this locality the mountain trout seldom weighs more than a pound, being at that weight from twelve to fourteen inches long; its fish is while in most cases, sometimes pink, rarely as red as salmon. I have never observed a tendency in the fisch it ogrow soft, but we do not have much very hot weather here. The fisch of salmon trout is always pink, and in the very large ones red as salmon, but they do not hold the color so well in cooking.

The clarkit is not so fond of swift water as the Dolly Varden, but lays at the bottoms of deep, dark pools, at the end of long rifiles, or under piles of drift wood; and in such places you will often take a dozen or twenty as fast as you can land them. The most taking bat it is salmon roe; occasionally angle worms are in order, and sometimes when all heat is rejected they will rise agently to the fly. I have had

end of long riffles, or under piles of drift wood; and in such places you will often take a dozen or twenty as fast as you can land them. The most taking bait is salmon roc; occasionally angle worms are in order, and sometimes when all bait is rejected they will rise eagerly to the fig. I have had more success with the coachman than with all other flies, but the tinseled red and brown hackles sometimes give excellent sport. It is possible that the mountain fish may have less endurance, when hooked, than the brook trout, but I will back a sea-run fish against anything of his ounces for the first rush or the twentieth.

Great account has been made, and with good reason, of the docility of these trout. When well fed they are as peaceable in a pond as sheep in a pasture. They may sometimes eat small fish, but certainly they do not to anything near the extent that the brook trout and the Dolly Varden do. The large ones eat many shellfish, shrimps in salt water and crayfish in fresh; these, with various flies and worms, and salmon roc when salmon are spawning, and water grasses and weeds, for they are considerable vegetable feeders, constitute their food. If they ever succeed in driving the brook trout from his native streams it will be by eating his food and not by eating him. I suppose the weight I have given for the largest of them will surprise Eastern readers, but it is a fact that I have often weighed them in May and June, when they were exceedingly thin from recent spawning, at twenty pounds, and I think the same fishes in Novomber, if they had lived, would have weighed at least thirty pounds. If winter fishing is ever practiced on the lower Columbia it will not

pounds, and I think the same fishes in Novamber, if they had lived, would have weighed at least thirty pounds. If winter tishing is ever practiced on the lower Columbia it will not surprise me to see a "rainbow" trout of forty pounds. If Mr. Mather's suggestion should prove true, and like German carp they should grow much larger in Eastern rivers than in their native waters, there will be a surprise for him one of these days. I doubt if even Mr. Stone, knowing them only by what he sees in far inland waters, suspects the size to which they grow at the mouth of this great tidal river. But the clarkli is not our largest trout, and I will close by mentioning that I have within a month measured a

Salmo gardnerii, another kind of rainbow trout, forty-two inches long; not guessed, but measured it with a two-foot rule.

Chas. J. Smith.

[We think our correspondent errs in assuming that Clark's trout is the one which has been sent East so freely. All that we have seen, or heard of, have been the coarse-scaled species. Sulmo iridica. It may be possible that some of those that Mr. Stone has sent East have been the clarkii, as Mr. Smith says that he has seen that species in the Government ponds in California, but those disseminated by Mr. Frank Clark, of Michigan, and by the New York Fish Commission, are the other species, at least as far as our observation has gone.]

MINNOW PAIL.

T is an old saying, "That every day brings something new;" and to-day I was shown "something" which was "new" to me, and which I will endeavor to describe. For the capture of various kinds of fish live shrimps or minnows are a necessity; and I have found it difficult to transport and keep them alive, as well as to remove them from the pail by landing net or hand without injuring them, or with sufficient facility when fish are bitting.

keep them afive, as well as to remove them from the pail by landing net or hand without injuring them, or with sufficient facility when fish are biting.

To-day my friend, Col. D. H. Elliott, agent of the Florida Dispatch Line, entered my sanctum, and placed a large pail-like "contraption" on the floor, and remarked, "What do you think of that?" Inquiring what it was he stated that it was the "Al Fresco Minnow Pail." I examined it carefully, and pronounced it an "admirable invention," and inquired "who designed it." He replied "Myself." As I deem it useful I will endeavor to describe it.

Material, copper; inside planished; height 14 inches; diameter 12 inches; near the top two rows of holes one-cighth of an inch in diameter and one inch apart; fixed convex top, with a five-inch hole in the center; elevation of convexity of top one inch above edge of rim; to outside of pail are attached two copper ears, and to these a stout copper handle like that of a common pail.

Inside and fitting closely is what may be termed a false bottom, side of same three inches high, side and bottom perforated with holes one-eighth of an inch in diameter, and one inch apart.

A copper rod about the size of a lead pencil is bent at right

inch apart.

inch apart. A copper rod about the size of a lead pencil is bent at right angles, like an inverted letter $\underline{\eta}$: each arm being $15\frac{1}{2}$ inches in length; the arms pass through holes in the fixed lid, and are soldered to the inside of the false bottom. A movable lid closes the opening in the fixed top, and the center of the horizontal portion of the U-like rod is soldered to the top of the movable lid; attached to the central portion of the lid is a copper handle like that of an ordinary coffee-pot

fee-pot
The pail is filled with water by immersing it, or by filling
it at the aperture in top of fixed lid. The minnow or shrimp
are introduced, and the false bottom lowered to its place, and
the opening in the fixed lid closed by the movable lid. When
not in use the pail can be tied to a stake or dock or lowered
to the bottom, a line and buoy being attached. When in use
it can be placed in the boat, or suspended from a row-lock by
a piece of cord. When traveling, if fresh water cannot be
obtained, that contained in the pail can be aerated by the use
of a tin cup, or simply by raising and lowering the false bottom a few times.

obtained, that contained in the pail can be aerated by the use of a tin cup, or simply by raising and lowering the false bottom a few times.

When the fisherman requires a fresh bait he simply takes hold of the handle on the lid, and raises the false bottom until it comes in contact with the top, when the minnows or shrimp will be out of their element and laying on the perforated false bottom. When hooks are baited the false bottom is lowered to its place, and the pail allowed to remain in or suspended in the water by the side of the boat.

In my humble opinion the "Al Fresco Minnow Pail" supplies a much needed want. It can be made of copper, zinc or tin by any tinsmith; or it can be ordered from the maker in this city, whose name will be furnished, if desired, to any of the readers of the Forest and Stream.

Al Fresco.

JACKSONVILLE, Fla., May 20, 1882.

THE WEIGHT OF RODS.

Editor Forest and Stream:
I have just been reading Dr. Henshall's "Book of the Black Bass."

Elikior Fibrest and Stream:

I have just been reading Dr. Henshall's "Book of the Black Bass."

How amusing are his supercilious remarks (at page 229) upon the proper weight, or rather lightness of trout rods. The doctor has written an excellent work on black bass, and he says: "I would here enter my protest against the lightest and "withiest' trout fly rods, weighing from six to seven ounces, being used or recommended for black bass fishing." So far so good. But then he goes on with this absurdity: "Such rods are but toys at the best, and only admissible for finger-lings or trout weighing from a half pound downward. I know that some anglers make a boast of using such rods, but it is on a pur with some gunners who rush to the extreme in light shytguns, and claim that a sixteen or twenty bore is capable of as good general execution as the larger gauges. Now these are borh palpable fallacies, as great as that of 'sending a boy to mill' in the 'History of the Four Ki :gs,' as many have found to their cost."

Poor Doctor! I don't know about the guns—perhaps he's right, there—but I'll leave it for some master gunner to speak for them; but as to a light rod, the poor man evidently has not had experience enough (with trout) to know what he is talking about. To judge from the dark, penetrating eye and great energy shown in the Doctor's portrait that adorns his interesting book, he has lacked the patience to become skillful in the use of a light rout rod, or else he has never seen or handled one (I mean a light one of four or five ounces). The Doctor actually expresses his preference for thrashing around (after black bass, though, in this case) with a tenounce rod, and enduring "the extra straining of the brachial muscles." doing that all day, to the time consumed in the operation; and to "the general demoralization and used-up condition of the flexors and extensors of his arms," in simply playing and landing a big black bass in open water!

If the Doctor plays billiarids, he doubtless prefers a twenty-ounce cue, and ge

to fourteen ounces.

The Doctor is entirely too diffident about his flexors and extensors, and too confident in the endurance of his brachial muscles. [Doctors do like to use half a dozen technical physiological terms for the same part of the system—it sounds learned—and once in a while, but not always, they befog a lawyer with them.]

The Doctor has yet to learn the delight and sweet reward

of controlling oneself, and delicately handling and killing with a five-ounce rod a three-pound trout. There are a dozen gentlemen in the Willewemoc Club who can do it; and all good fly fishermon (for trout) know that the lighter the rod and the heavier the fish, the greater the pleasure (provided you have the skill). I wish the Doctor more practice with a lighter rod, and more faith in his extensors, and more delicacy of manipulation. Geo. W. VAN SICLEN. NEW YORK.

THE FLY-CASTING AT NIAGARA FALLS

WE have just received proof sheets of the programme of the twenty-fourth annual convention of the New York State Association for the Protection of Fish and Game. York State Association for the Protection of Fish and Game. We have had many inquiries about the prospect of their having a fly-casting tournament at the meeting, and we find there is to be one. Whoever is managing it has seen fit to make but one class, open to all, and not to follow out the excellent arrangement of last year, whereby the amateurs had a chance. To remedy this Mr. B. F. Nichols steps in any offers, in addition to his free-for-all sweepstakes, a sweepstakes for amateurs, from any State—a new departure; thus making three contests in all. We highly approve the plan of Mr. Nichols, which will bring some new men into the casting. We regard the fly-casting as the most important, useful and beautiful of all the contests arranged by the association, and it is usually given a very humble place.

The following is the programme:

FLY CASTING.

WEDNESDAY, JUNE 14.

WEDNESDAY, JUNE 14.

WEDNSBOAY, JUNE 14.
THOUT AND BLACE BASS.
At 1 o'clock A. M.; single hand casting, open to all members; entrance fee, \$5.
First prize—Conroy & Bissett, New York city, donate one German silver mounted split bamboo fly rod; value.

We add cash.
Second prize—Loomis & Plumb, Syracuse, N. Y., donate one elegant gold bronze automatic reel.

Second prize—Cash.
Third prize—cash.
Two Climat gun cleaners.

8 00—23 00

SPECIAL PRIZES FOR TROUT AND BLACK BASS FLF-CASTIFG.

THE B. F. NIGHOLS SWEEPSTARES.

Open to members of Fish and Game Protective Associations from my State. Rules of New York State Association to govern as far as supplicable.

Open to memoers of rish and Game Projective Associations from any State. Rules of New York State Association to govern as far as applicable.

Donated by F. Nichols, manufacturer of split bamboo fishing rods, 153 Milk street, Boston, Mass.

First prize—One split bamboo salmon rod. 15 feet long, 3 pieces, 2 tips, in grooved wood case, and seek; value.

Second prize—One split bamboo fly rod. 10 feet long, 3 pieces, 2 tips, in grooved wood case, and sack, value.

Third prize—One split bamboo minnow or trolling rod, 5½ feet long, 3 pieces, 2 tips, in grooved wood case, and sack, value.

16 00

ANOTHER FISHY COINCIDENCE.

CONSTANT reader as I am of your delightful and valuable journal, Forest and Stream, I often note some queer things from your correspondents; few "queerer," however, than the "Fishy Coincidence" in your last. It was very strange, and I am tempted to relate a companion to it. In Omaha lived a venerable Dutchman and his good vrouw. He was called Hans, and was somewhat superstitions, while she was named Katrina, and was skeptical. He tells the story:

vious, while she was named Katrina, and was skeptical. He tells the story:

'One night, while Katrina and I vas sleeping, I vas awake mit my eyes all de vile by a leedle tog who howled by himself in de pack yart. I vake oop Katrina, und I say to her, 'Katrina, sometings vas goin' to happen, the tog he howl

so.' 'Katrina she say, 'Co to schleep, you olt fool! to tog he

"Rattina sie say, to to sameep, you to room to wa look by te moon."
"I try to schleep, but I vas sure dot someding happen, und my eye vas fast awake. The tog he howl und howl, und Katrina she snore und snore for maybe helf an hour, und I dond can stand him no longer. I give Katrina a digi nde ribs by mine cipow, und say 'Katrina, Katrina, aufstehen und make a lite, te tog howl so I know someding must happen!"

that make a met, to tog active the pen!"

"Katrina yust kick like a mule, und holler, 'Get up oof you want to, I won't leave de ped if de tog howl till de ewigkeit!"

"So ven Katrina said dot she yust turned und snored again till I tink de clock must stop or de shingles get loose; but I coodn't sleep, cos I vas sure somedings vas goin' to happen. Und ven I come down py mine shop in de mornin' und pick ub a newspaper, vat you tink? Dere vas a man dead in Viladelfy."

Co, INCIDENCE.

delfy."

Fisheres of Virginia.—Census Bulletin No. 281 contains the statistics of the fisheries of Virginia, as gathered by Col. McDonald, special agent. It comprises a series of seven tables, embodying the figures for the year ending June 1, 1880. Table I. shows the number of men engaged in the thirty counties in the shore and river fisheries as 3,682 and the capital invested \$340,855. Table II. gives the quantities and values of the products of the shore and river fisheries, as follows: Shad 3,171,953 lbs., worth \$134,496; alewife or river herring 6,925,413 lbs., worth \$76,800; sturgeon 411,558 lbs., worth \$6,973; Spanish mackerel 1,609,663 lbs., worth \$12,699; bluefish 1,540,417 lbs., worth \$80,023; gray and salmon trout (weakfish or squitague) 1,476,000 lbs., worth \$29,790; sheepshead 503,666 lbs., worth \$26,645; miscellaneous fish 4,480,279 lbs., worth \$110,117. Of crabs we have 1,069,600 lbs., worth \$38,088; clams (hard) 363,820 lbs., worth \$18,555; terrapin (estimating each at 3 lbs.) 165,600 lbs. worth \$18,550; making a total of all kinds, including clams, crabs, and terrapin of 21,729,969 lbs., valued at \$602,239. Tables III. and IV. give the number of men in the oyster industry as 16,315, their capital invested as \$1,351,100, and their product as \$2,37,537 bushels, valued at \$2,340,588. Table V. gives the number of men in the cyster industry as 16,315, their capital invested as \$1,351,100, and their product as \$2,37,537 bushels, valued at \$2,340,588. Table V. gives the number of men in the menhaden fisheries as 708 and the value of their vessels, apparatus and the factory plant as \$222,164. Table VI. gives the number of menhaden as 143,353,600, from which was derived 203,769 gallons of oil worth \$81,505, flose, flose, making at total value of \$303,829. Table VII. gives a statistical summary of the above facts arranged in a different manner, showing the sub-divisions of the men and their catch into the different fisheries.

TROUTING IN CONNECTICUT.—Putnam, Conn., May 29.—Some of the largest strings of trout that have been taken for years, in this and adjoining towns, have been caught within the last two weeks, the continued rainy weather has raised the water just right for successful fishing. Some of our noted anglers have brought in baskets of trout that created quite a sensation. One party caught thirty-five, one forty-two, and another old veteran angler fifty-seven trout. We have a brook running through the northern part of this village that used to be considered a very good trout stream, but had been fished so much, that we supposed but few if any fish remained, but an old angler thought he would give it a trial, and to his great surprise, he not only filled his creel but his coat pockets also, with trout ranging from ½ to ½ pounds each. The news from Rangeley Lakes of 7½ pounds atrout being taken at the Middle Dam, and a 100 pound catch at Upper Dam, stirs up the fraternity here considerably, we had not expected to go up until September, but the fever is coming on strong, and rods, fly books, and tackle are being examined closely and some bright morning about the middle of June, may find some of Putnam's old veterans up at the lakes. If so, Forest AND Strikent will have to report large catches of trout, as we have "been there" and know how it is done. Most all of the parties that go to the Maine woods from this place are merchants and manufacturers, and it is hard to get away at this season of the year, so I suppose we will have to be content with brook fishing for trout, and black bass fishing in its season.—W.

Bass in New Jersey.—The Newark Sunday Call says:

"Among the best bassing localities easily accessible to Newark
ers the following may be mentioned and rated nearly in the order
named: Delaware River, in Warren, Sussex and Hunterdon
counties; Greenwood Lake, Hopatcong Lake, Culvers, Long
and Swartswood ponds, in Sussex county; Green and Splitrock
ponds, in Morris county; the Raritan River, the Passalc
River above Little Falls, and the Pompton River, above Two
Bridges. Special permission can often be obtained for fishing in many small but well-stocked private ponds in the
northern counties, and immense sport secured. The Delaware River is named first because it is reputed to be the best
bass ground in the Middle States. It is certainly the largest,
most popular, and probably the most visited by anglers. The
Raritan, above tide-water, is said to abound in bass. The
Passaic is steadily improving, and although three-pounders
are rare, the prospects are that the fish will increase in both
size and numbers every year. The fishing at the lakes is well
known to all anglers, and but little can be said of it that has
not appeared in these columns. Black bass have almost extinguished the pickerel from all waters in which they have
been placed, as there is nothing more to the tasts of a fullgrown bass than a half-grown pickerel, and the quiet habits
of the latter make him easy game for the prowling bass.
Other fish more easily avoid the destroyer, and multiply after
his advent as before.

his advent as before.

Habits of the Gar.—Indianola, Tex., May 25.—While a friend and myself were out for a little hunt last Tuesday morning, 28d ult., and while walking in the marsh surrounding a lake in the vicinity of this town, the marsh being about ankle deep with water fresh from a late heavy rain, we found the marsh full of gar fish, from three to five feet long, as thick in places as they could lay together. They were so thickly piled in places that when they wanted to move they just slid over one another. They were about half to two-livings covered with water; no small ones among them. They took no notice of us at all, although we stood almost among them. There must have been thousands, they being in the same condition, so far as we could see, and we walked a mile or more in the marsh. The lake is about three miles in length and about two in breadth, and is fed from the bay. I have hunted and fished in this State for thirty years and never have seen the like before. What were they doing fine rains, and look forward to having fine plover shooting this fall. Some ducks still here. Geo. Armstrong.

THE WA-WA-YANDA FISHING CLUE.—The Wa-Wa-Yanda Fishing Club, of Long Island, opened its club house for the season of 1882 on Monday, May 29. The club boat connected at Babylon with the 3:30 and 4:30 P. M. trains from New York During the season it will connect with the morning and afternoon trains to and from New York except on Sundays, and then the morning train only. A large number of members attended the opening and a very enjoyable time was had between singing, feasting and the like. Many of those who went to the opening remained over Decoration Day. They spent their time in fishing, sailing and other diversions. The officers of the club are Shepherd F. Knapp, President; James A. Flack, Edward Kearney and Charles Banks, Vice-Presidents; Ambrose Monelle, Treasurer, and Robert A. Van Wyck and R. M. Jordan, Secretaries.

Robert A. Van wyck and R. B., Jordan, Secretaries.

Carp in Morkhes Bay.—A few weeks ago we recorded the capture of a carp in Moriches Bay, which is the eastern end of Great South Bay, L. I., and remarked upon the freshness of the water there. It was thought to be merely a stray fish which had escaped from some pond and had got into the bay and was kept there by the increasing saltness of the waters to the west. Last week Mr. Blackford received another carp of three pounds' weight from Da idel B. Cook, of West Hampton, L. I., a little further east than the place where the former one was captured. Mr. Cook writes to know what kind of a fish it is, and rightly suspects it may be a German carp. He says that the fishermen report small carp plentiful in the bay.

THE "R. W." FLY.—Syracuse, N. Y.—I have been trying the fly known as the "R. W." (which, as you may know, is short for Reuben Wood, the champion fly-caster), and I regard it as the most killing fly for either trout or black bass which I ever used. I went to a place on the Oswego River, about four miles south of Oswego City, last week, and took ten bass, nine of which struck the "R. W." Mr. John Balbook recently went out on Seneca Lake and took eight bass, all with this fly. He also regards it as the most killing of flies.—Central City.

Extraction of Lobsters.—The Belfast, Me., Journal says: The canning business is rapidly killing out the lobster fisheries on the coast of Maine. Good judges say that in three years more the factories will have to close for want of fish. Over fourteen million pounds were caught in 1879-80, of which nearly nine and a half million pounds were canned. Some of the packers are already moving to New Brunswick and Nova Scotia, from whence lobsters will soon have to be imported, according to present appearances.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

[CONTINUED]

[continued].

M.R. PHILLIPS—This most interesting paper by Prof. Ryder will be read with much interest. The changes of color in the oyster has long attracted the attention of oystermen, but no valid causes have heretofore been given for them. Here in this vial is an oyster opened by Mr. Carley, in Fulton Market, and it is black. In the South they have a dark oyster which they call the mulatto oyster. Prof. Ryder has thoroughly investigated the subject of color, and has exploded the idea that the green color is caused by copper. There is no metal more easily found than copper, where it exists, and a dozen different tests are in the hands of overy housekeeper, which would show its presence in an instant. Prof. Leidy took what was supposed to be distomacca, which was said to give the green color, and proved that it was of vegetable origin. Ryder has found that it is a vegetable organism which enters the oyster. In regard to their artificial culture Prof. Ryder believes that if the water is kept pure by flowing currents over the young they can be reared. In his experiments they only survived six days, but his arrangements were incomplete.

pleasure.

Mr. Hewlert—Some oysters that are planted in the fall are white. Some are green when we get them, but if they do well the color comes right. It depends greatly on what the

seds on. oyater feeus on.

Mr. Phillips—The question of breening is the most included that one. It is now reduced nearly to the point that the fish-culturists have reached. Prof. Ryder has distinguished the male from the female, has taken the ova and fertilized it and developed it until the unfortunate sixth day. He has not yet agrired them beyond that, but no doubt will accomplish it ansarried them beyond that, but no doubt will accomplish it ansarried them beyond that, but no doubt will accomplish it ansarried them beyond that, but no doubt will accomplish it ansarries.

carried them beyond that, out the desired them beyond that casson,

The President—We would like to hear from Col. McDonald on the breeding of shad, and their relations to water tem-

The President—We would like to hear from Col. McDonald on the breeding of shad, and their relations to water temperatures.

Col. McDonald—The reasons why fishes return to the waters where they are bred are not well established. We have had many theories on the subject, some claiming that they are guided by memory and others by scent. It is more likely that they are governed by temperatures, and the question of the relation of temperature to the migrations of shes is so important that several European governments, particularly England and Sweden, are engaged in investigating it and its particular relations to the migration of the herring. A difference of three degrees is often very important and may exclude a fish from our coast. The duration of the river life of shad is determined by temperature. The young leave the rivers on the arrival of a certain temperature and not at a certain time. Adult shad enter rivers at a temperature of botween sixty and seventy degrees. On the St. John's River, Fla., the height of the season is in December, by to observations at Jacksonville show that the shad do not enter the rivers until the temperature reaches 70 deg., and what is an anomoly, they enter when the temperature is falling, while on all other rivers with which we are familiar they enter when it is risin. Shad do not run out of Chesapeake Bay on 51 deg., and let the temperature of Long Island Sound he 55 and the shad will probably remain there. I have a table of the temperatures at Old Point which gives the temperature of the bay on the land side between the guilf and the shad will probably remain there. I have a table of the temperatures at Old Point which gives the temperature of the bay on the land side between the guilf and the shad will probably remain there. I have a table of the temperature are similar until the latter reaches 50 deg., when the eafter reaches 10 degrees the season is marked than the above the presence of the standard of the standard side of the temperature of reaches. Tood follows temperature a

attached tags to them in order to identify them on their return. This has also been done in Scotland, with interesting results.

Mr. Wilmon—I feel it a duty to except to Col. McDonald's theory of the migration of salmon because the salmon is the highest migratory fish of the world, and by highest I mean the most intelligent. I have never heard this theory before, but it does not seem to be a correct one. Shad do not breed in New Brunswick, and I have not had as much experience with them as with salmon, but believe that they are moved merely by instinct, while the salmon are intelligent, or at least have stronger instincts. There is much difference in the strength of instinct. The horse has a stronger instinct than the ass. I am not prepared to enter into an extended argument on this subject, but will call attention to the fact that Mr. Livingston Stone says that the temperature is lower in California than in the rivers of the East, at the time when he eggs are gathered. He kept a daily record of the temperature and found it lower than our Canada rivers, because of the melting snows in midsummer. I do not think that the temperature has much to do with the movements of salmon. Col. McDonald—I don't think that we disagree. If a salmon can choose between a temperature of sixty-five and seventy, no doubt it will do it and avoid the warmer one.

Mr. WILMOR—Not if its a native of it.

Col. McDonald—It is a well-known and established fact that the movements of ood are regulated by temperature. If you go on the coast of Maine when the water is at a low temperature you will find no cod, not because they are cosmopolitan in their habits and move from place to place by caprice, but because of the temperature. When cod are there, a fall in the thermometer of two or three degrees will send them off. The California salmon spawns when our waters are warm. Its own waters are warm. It sown waters are warm. It was no a temperature of sixty, and when its cells to our coast it lives in a temperature of sixty, and when its cells to

spawn in on our coast.

DR. HUDSON—We have put 300,000 California salmon fry in the Merrimac River. They were ready for distribution in January. We afterward found hundreds of them three inches in length. They went down, and we have not seen them since. This shows that they found food and grew, but whether they fail to find food at sea or not, or if they do not find suita-

ble waters for spawning I don't know, but incline to think that Col. McDonald is correct.

MR. WILMOT—I may be laughed at for the statement, but will say that the Californian salmon may possibly become Atlantic salmon, and that I have always thought so, and that the Eastern salmon taken West would become the Californian

lance samon, and taken West would become the Californian salmon.

Mr. Evarts—I agree with Mr. Wilmot. The salmon will change its color and the color of its flesh.

Mr. MATHER—It is impossible. Of course food and water will change color, but the quinnat or Californian salmon is a different ship, has a different structure, the most marked of which is more rays in the anal fin, at least six or seven more. And food and water would not change this in fifty generations of them unless hybridized. They are as different as our brook and lake trouts, which retain their distinct peculiarities in the same lake for years. The differences are not merely in color but in structure, as shown in the skeletons. Any one can see it in the teeth of the two trouts. Color counts for but they little in ichthyology, and a quinnat salmon differs from the S. salar as much as the horse and the ass.

MR. BLACKFORD—There is no doubt of that. A Californian salmon could not change so as to be mistaken for an Atlantic one by an expert.

MR. WLMOT then read extracts from his forthcoming report on the decrease of salmon in the maritime Provinces of the

c. Wilmor then read extracts from his forthcoming repor-ic decrease of salmon in the maritime Provinces of the linion, but as it had not been published he took the paper

im. SECRETARY then read a paper from Prof. G. Brown on "The Swordfish," which will be begun in our next.

FISHCULTURE IN TEXAS.

FISHCULTURE IN TEXAS.

PREVIOUS to any efforts at fishculture by the State of Texas, Professor Baird, the United States Commissioner of Fisheries, sent several shipments of both shad and California salmon into the State. We have been at some pains to gather the following facts concerning subsequent operations, and place them on record.

On March 81, 1881, the regular session of the seventeenth Logislature of Texas passed an act appropriating five thousand dollars annually (for two years) "for the propagation, preservation and distribution of fish," and aut orizing the Governor to appoint a Fish Commissioner. Under this act Mr. J. H. Dinkins was appointed. In June, 1881, Mr. Dinkins sent to Washington and received from the U. S. Fish Commissioner three hundred thousand shad fry. One hundred and fitty thousand were taken through to Austin. Eighty thousand of these were deposited in the Colorado R. ver at Austin, and the remainder (70,000) were deposited in the San Marcus, Guadapipe, and San Antonio rivers; in what proportion is not known. One hundred and lifty thousand were deposited in the Sabine River: these fish were in a dying condition when turned into the Sabine.

In December, 1881, Mr. Dinkins was accidentally killed by being run over by a sleeping car at Walker's station, on the G. H. & S. A. R. R.

Governor Roberts appointed Mr. R. R. Robertson Fish Commissioner on Dec. 27, 1881. In January, 1882, some two thousand carp were distributed by the State Commissioner.

Mr. Robertson has constructed on Barton's Creek, near Austin, three carp ponds, covering three and a half acress. One pond of one-half acre was started with fifty scale carp on April 5, 1882. Some of these carp were twenty-seven inches long when put in the pond. The fish spawned soon after they were run into another pond by means of siphons. Although all the breeding fish were scale carp, fully one-third of the small fry are mirror carp.

were placed in the latening point, and on may o one small rry were run into another point by means of siphons. Although all the breeding fish were scale carp, fully one-third of the small fry are mirror carp.

In April Mr. Robertson received from the U. S. Fish Commission four thousand California rainbow trout. Three thousand of these were placed in the Comal Springs, near New Braunfels; temperature of water in the springs, 70 deg. F. One thousand were placed in Earton Springs, near Austin. Though these fish were not more than five-eighths of an inch long when turned loose, they soon appeared to be at home, and on January 1 were very lively and growing well.

On May 16 Mr. Ellis, of the U. S. Fish Commission, deposited in the Colorado River, at Austin, one million shad and three million herring fry. On the 17th Mr. Ellis started back to Washington, carrying with him a motley lot of fish, as samples, from the Colorado River—catfish, suckers, buffelo, perch, "gaspergoo," trout (bass), alligator and needle gars, furtles, etc.—as a contribution from the Fish Commissioner of Texas to Prof. Baird. Mr. Ellis also carried with him to Washington about a dozen young carp of this spring's spawning, some of which were two inches long, and were not a month old.

THE NEW TRANSPORTATION CAR.—The new railroad car of the United States Fish Commission, built for transporting fry, or for hatching them on the way, is partially completed, and left. Washington for the Nanticoke River, Delaware, on the 1st inst, with one million shad fry. The arrangements for circulating the water are not yet completed. When all is thished we will give a description of it. The season for shad eggs has been the worst ever known.

The Rennel.

FIXTURES.

June 6, 7, 8 and 9.—Cleveland, O., First Annual Bench Show of the Cleveland Bench Show Association. Charles Lincoln, Superintendent; Western Pennsylvania Poultry Society's Bench Show Deby Pittsburgh, Pa., for English setters whelped on or after March 1, 1882. Entries close December 1, 1882. I. R. Stayton, Secretary, Allegheny City. Pa.

FIELD TRIALS.

FIELD TRIALS.

September 4.—National American Kennel Club Field Trials on Prairie lickens, Fairmont, Minn. Entries for the Derby close July 1, for the llaged, Sept. 4. Jos. H. Dew. Columbia, Tenn., Secretary.

November 17.—Eastern Field Trials Club Field Trials on Quail, near igh Point, N. C. Entries for the Derby close July 1. For the Allged and Members' Stake, November 1. F. N. Hall, P. O. Box 584, ow York, Secretary.

December 4—Mation American Kennel Club Field Trials on Quail, rand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

ENGLISH SHOWS AND CLUBS.

ENGLISH SHOWS AND CLUBS.

THERE are some spicy letters by "Sprint" in the Live Stock Journal, from which we take the following, which is "mostly about the Kennel Club."

Many a time of late have I blushed to be thought one of you. Yes! and "my hair has stood on end with horror" on the bare recollection of the fact that for well into the teens of years have I mixed freely amongst dog shows and their habitude, and never, until recently, was I aware the danger incurred in so doing, because of the general moral rottenness and actual dishonesty by which our canine exhibitions, their promoters, committees, and judges, and exhibitors too, are surrounded. At least the ordinary observer would think such actually the case, were he to form his opinion from certain articles which have, within the past few months, appeared in the columns of the various newspapers devoted to the "fancy." That I have moved in such a circle for so long, and at the same time kept my innocence and honesty intact, cannot for a moment be supposed, especially when one has not forgotten that "copy head" we were wont to write in small hand at school, which was something to the

effect that "evil communications corrupt good manners."
Well, ist us nops I may prove that exception which is under
I shall write of dog shows and their recent movements
with a full conviction that I have received no contaminations
from them, and that it is very hard their surrounding
have been, merely because of the presence of one
have been, merely because of the presence of one
have been, merely because of the presence of one
have been, merely because of the presence of one
have been, and the presence of the control of the control, and associated with and become
longen to a large majority of exhibitors. This was before the
establishment of the kernel club, and had been certain my
standard to the control, and associated the become
longen to a large majority of exhibitors. This was before the
establishment of the kernel club, and had been certain my
standard to the benefit of the control of the control
have been one of the original members of that body. But
they would no one tool the better fool, or over any bumble
into consideration the sum required to be expended in subscriptions, no inconsiderable one, up to the present time. Per
have beenfeld the nution at large. There is nothing like
"turning money over," not in your pocket, as is the custom in
some parts of the country when you hear' enckool cuckool"

Some two or three years ago it was the custom to find fault
with and willy certain of our dog show judges, but they,
happy and contented enough in their tunocenee, could afford
butter growings and false demunications of disappointed exhibitors, than does the moon at its noctarmal nowings of
some wakeful dog. Ding, dong for a time did these grains,
was very much like "kicking against pricks." This was not
well and the sum of the present the province of disappointed exhibitors, than does the moon at the noctarmal nowings of
some wakeful dog. Ding, dong for a time did these grain,
was been and the sum of the presence of considerable in province the present of the presence of the presence of the presence

variety of dog. The Fox-terrier Club offers prizes at many of the leading shows, but the majority and most valuable of these are open only to competition by its own members (The Challeage Cup goes for nought, as it cannot be won outright). It seems to me that were the desire to benefit the cause of the fox-terier generally, and not those of the members of the club in particular, these prizes should be open to all. Then again, the club offers prizes only when the name of the judge of terriers is submitted for its approbation. The judge's name is given; perhaps—most likely—he is a member of the F. T. C.; he is approved of, and, honestly as he undoubtedly acts, he gives the principal prizes to who? Why, to members of the club which has sanctioned his appointment! To the outsider this looks bad, though doubtless it is straightforward and as conscientiously done as possible. Similar objection has been taken to the Kennel Club members exhibiting under judges of their own appointment; but if this looks or is bad in a big club like that, it looks or is a hundred times worse in a smaller club like that to which I have drawn attention.

PETREL II.

PETREL II.

WE give this week a capital likeness of Mr. J. H. Goodenampion prize in the English setter class at the last New York Show. She won first in the imported English setter class at the last New York Show. She won first in the imported English setter class at the same show in 1831, also the special with her brother Pontiac for the best brace at the same show. Petrel II. is an exceedingly well-formed animal of rather small size, blue belton in color and very handsome, with lots of quality. She is by Pride of the Border out of old Petrel, and is undoubtedly the best Laverack bitch in this country. She is now in whelp to Mr. Goodself's Don Juan. The cut is from a sketch by Harry Tallman. Petrel II. won first at Cleveland, Tuesday.

(Special Dispatch to Forest and Stream.)

THE CLEVELAND BENCH SHOW.

The first annual bench show of the Cleveland Bench Show Association was opened this morning. The first day has been a success; fine weather, good attendance, and promise that Cleveland may be ranked among the dog-show-supporting cities. The hall is well adapted for a bench show, and the arrangement of the stalls all that could be desired. The able superintendence of Mr. Chas. Lincoln has assured the best of care for the dogs exhibited.

The judging began at 11.15 this morning, the awards made to-day being as follows:

to-day being as follows:

AWARDS.

Champion English setter dogs—1st, A. H. Moore's Thunder (Pride of the Border-Periary II.)

PUTTING IT INTO PRACTICE.—White's Kennel, Bridgeport, Conn., May 10.—Editor Forest and Stream. Your articles entitled, "Training vs. Breaking," cannot be spoken of too highly, I have always found that a mild but strict course, is the best to follow in training a dog of good intellectual abilities, and I pursued my own ideas, governed by this belief in training Sen Jr. with success. But in training my little bitch Lalla Rookh, I followed the directions given in your articles, which I always believed in on general principles, but never before carried out systematically. I don't know how to describe the pleasure it gives me to work this little creature. Her grentest delight is to obey, cheerfully and intelligently, her sole object seems to be to watch for my commands and obey them. How much more pleasing this is than to see a dog obey through fear. To anyone who should try this system, and fail, I would say, unhesitatingly, Your dog is a "duffer."—L. W. Whitte.

THE BOSTON "GLOBE" says of "Training vs. Breaking." "The author, Mr. S. T. Hammond, displays an extensive knowledge of the habits of those useful and at present fashionable animals, and treats the subject of their training with a skillful hand. The writer in his first paragraph takes a stand differing from most trainers when he states emphatically that it is not necessary to beat knowledge into a dog's head. He favors training by kindness rather than fear, and asserts that the results are far more satisfactory. The book is one which should find its way to the table of every dog fancier, if for no other reason than the sake of humanity."

THREE MEN AND A DOG were in a boat on the St. Lawrence. The boat capsized, and the dog, instead of saving the men, sagaciously swam ashore and let them drown. This is one of the little dog stories that will not be related in that touching publication, "Our Dumb Animals."—Loutsville Courier-Journal.

A PORM BY PART. PASTNOR.—"LORB" is the title of a generall poem in pentameter verse by Paul. Pastnor, one of our younger American poets. The incidents suggesting the poem are very simple and commonplace, and it is only the grace and ease of description and the clear-cut sentences and musical system that mark the merit of the writing as far above ordinary. The author shows a keemess of observation and a felicity of epithet which give signs of promise for the future. John E, Potter & Co., Philadelphia. Price 75 cents.

BOB.—Dedham, Mass., May 21.—Editor Forest and Stream: I was much surprised at your report of small pointers. You say that "with the exception of Peter Black there was not a good one in the class." It seems to me that your reporter must have forgotten the high praise he gave to me of Bob, entered by G. W. Alnory) who was placed second. If so please right it.—FRED. A TAFF. [We cheerfully make the correction, and assure our correspondent that the omission was accidental, and owing to the fact that Bob was absent from his stall at the time we examined the class, and we did not see him until the next day when we found him to be a capital one and so wrote of him, but the memorandum somehow escaped notice when writing our report, and was not seen until we looked for it upon receipt of the above letter.]

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be written in PRDYLETERS, as we find it very casy to make unstakes where this is not done. We also would like to be informed whether the animal is male or female, and to know the date of birth and the breed to which it belongs, whether pointer, setter or other. A careful study of the notes in this number of the paper will show just what is wanted.

NAMES CLAIMED.

Mailes Chaimed.

Mai. By Mr. C. V. V. Sewell, Tarrytown, N. Y., for black and white cooker spaniel bitch, whelped March 3, 1832, by Bob III. out of Lady Bath.

ALBANY, June 1.—Though the heavy rain of yesterday morning had dampened the ground, the riflemen, with their trusty zuns were on hand at Rensselaenwyck when the matches were called, their ardor not dampened, and as enthusiastic as ever, determined to hit the bullseye and roll up a roof score if such a thing were possible. A strong wind had to be contended with, and the passing clouds, throwing alternative light and shadow on the targets required constant care, and delicate manipulation of sights to keep by Johnson of the contended with the cont

SMALL YACHTS.

Wiff don't you take to yachting? Well, you say, small loads are such dangerous affairs, and large ones cost so much. This is the opinion prysuling among nian hundred and ninety-rine out of every thousand persons you meet, and this is the untal reason, why to use few. Blang and the two significant control of the programme of the two significant control of the programme of the two significant controls and the programme of the two significant controls and the programme of
then the pastime will become widely popular, and every household near the water will be a use cruizer within sight at its marriage on

then the pastime will become widely popular, and every household near the water will have its cruiser within sight at its moorings, an appendage to the family establishment quite as much as the clock on the manufe, the plane in the parlow or the mag in the stable. Its moorings, an appendage to the family establishment quite as much as the clock on the manufe, the plane in the parlow or the mag in the stable. As the clock on the manufer promition will pack off this progeny for a cruise whenever opportunity offers, teach them the ropes, and by dint of the active lift, the foresight and nimble wise cultivated and herdships imposed, further in them the aspirations of men, and develop the nobler side of their character. Yacht clubs have done next to nothing as yet to lift into prominence a commendable type of small beat, but in permitting ballast to be shifted and racing under length rules, are to be held responsible for the perpetuation of the dangerous lift reason, lusted as parlowed by the provided of the control of the dangerous lift reason, lusted of pandering to the vested interests of a few. The efforts of Forker And Strikan have steadily been directed to the introduction of a style of boat suitable to the masses; safe, roomy, cheap, handy, able, weatherly and sightly. To that end we have recommended moderate losen, berge displacement, good depth and draft, keels with outside ballast and the yawling. The rapid multiplication of new boats more or less closely approaching to the lines offered by small yachts, and oring to the sailing community many who have heretored elemed the capabilable trap the only thing attainable without resort to great tonnage. Ament this subject we quote from an article by J. T. Rothrock, entitled "Sailing for leath," which appeared with illustrations in Our Continent for May 31:

"Divore yachting from the earlier disreputable associations which humbed it, and you make it a moral agent; furnish facilities for the summer regatts. Though these are not of necessity demonalizing, they are

a regatta.

What are the special advantages of sailing from a sanitary point of

where the special edvantages of sailing from a sanitary point of view?

First—It is a complete change in mode of life.

Second—It therefore brings rest in directions where mind and body were previously chiefly taxed.

Thirl—If property conducted it enforces simple living, muscular exercise, early rising and in emergencies prompt decision and speedy action, thus bringing interease of physical vigor.

Fourth—It is encaper than an ordinary seaside resort, having beside all of the hygienic advantages with but few of the peculiar disagranges.

extence sarly rising and in emergencies prompt decision and speedy action, thus bringing increases of physical vigor.

Fourth—It is encaper than an ordinary seasidor resort, having beside all of the hygienic advantages with but few of the peculiar disadvantages.

Fifth—It gives rest to the eyes which continuous work at near distances has taxed, injured and often almost ruined.

These are not advantages deduced from physiological reading, or the produced provided and the produced of the produced from physiological reading, or from some or advantages and the produced from the produced produced produced from physiological reading, or from some or advantages specified from physiological reading, or from some or advantages specified above; this too is no doubtful or equivocal measure.

Size in a yacht is no criterion whatever of comfortor of safety. A large, costly vessel may be (nay, often is) more uncomfortable and dangerous than a small one. Even extended cruises may be undertaken by experienced men in ridicously small yachtis. Without going may serve a useful purpose to remember that the larger vessel, and the produced from the face of wind and current, from England into the Arcte strait, which will for ever commenorate his exploit.

THE "GRAPHIC" ON TRAPS.

"THE pleasure boat capsizing and drowning season commences' with unusual vivacity this year. On sail and fresh water during the last ten days nearly a score of lives have thus been lost. The le is no recreation more perilous than that of boat sailing by in the last of the property of the prop

mg machine does not itourish, her place being supplied with deep, roomy, cheap little boats of the lichen and Southampton type instead.

Every good interest lies in favor of such boats in preference to the machines, and nothing but an inexplicable cringing to prejudice still permit to the control of the property of t

LARCHMONT YACHT CLUB.

LARCHMONT YACHT CLUB.

THE first club pennant matches were sailed Saturday last, and brought out a good list of cracks. The only thing to spoil the racing was the fickle nature of the wind, something likely to bother the club throughout the year, as we have known it to blow sift from one quarter on the Long Esland shore with a calm in the channel and one of the club cannot be lield accountable. Moreover, the club cannot have been considered as the club cannot be lield accountable. Moreover, as we have known it to blow sift from one quarter on the Long Esland shore with a calm in the channel and the 57th the club cannot be lield accountable. Moreover, as the considered a very satisfactory way of competition. In strong winds the big ones would receive an under advantage. But the club is not to blame, and have it all to themselves, and in light airs the little fellows would receive an under advantage. But the club is not to blame, hope out of the difficulty is that societ their divisions. The only hope out of the difficulty is that societ their divisions. The only hope out of the difficulty is that societ their divisions, that we may learn to build up to class and bring yachts nearer the same tonnage to the mark in the same lot. That involves a consideration of what the standard of measurement shall be, and as the principle clubs are still at loggerheads on this point, the day for uniform classification, "by authority," seems yet very far off. With this and of the fourth class, Inding Wnerty all of its interest, and rearly all with a streak of luck, while they lay almost becalined, give up in disgust and did not finish. Starters and courses as under:

Third Class—Cabin Sloops.—Facile, 74ft, 1lin.; Eclipse, 51ft, and Fanita, 48ft, Sin.

Fourth Class—Cabin Sloops.—Facile, 74ft, 1lin.; Eclipse, 51ft, and Fanita, 48ft

among the big ones, and dropped Fanita and Eclipse, the latter, by the way, sailing in improved form since the rounding off of her fore-foot and the lead plaster on her keel—another instance showing that lead down below does not interfere with speed, as the old school loves to tell us. Gracie and Eclipse, after rounding the Captain's Bland mark, worked the Long Island shore and got the better of Fanita, who essayed boards down the northern coast.

The small classes of open boats, which, we regret to say, indulged freely in the doubtful expedient of tossing bags, which the rules of the club still permit for some occult reason, had a lively time keeping right side up with care when they struck the sharp puffs coming much tight sistend beach. They managed to work through with narrow squeezes and "letting out." Tonnage counted, as it always does upon such occasions, and Zoe specifly disposed of her sisters. The finish was made as under, Gracie and Wave winning among the yachts, and the honors among the machines falling to Cornell, Zoe and Truant:

	THIRD	CLASS.

At a necting of the club hold in the evening, in the handsome new club house at Larchmont, the following members were elected; H. W. Perkins, C. A. Minton, S. Van Wyck Jenes, F. W. J. Hurst, W. L. Breeze, Frederick W. Adee, Goo. P. Douglass, Cyrus L. W. Eldiliz, E. Du Vivier, H. C. Sturges, Augustus Brown, Alphonse H. Alker, J. Woodhull Adams, Harold B. Wallack, A. H. Baldwin, Charles P. Roberts, M. D., Arthur T. Hendricks, W. H. Bogart, Philip Henry Adee, A. Seymour Fitch, David Crocker, H. F. Kerr, H. J. Park, Francis Burritt, Alphonse Montaut, F. D. Ives, H. W. Catlin, Rudolph Allen.

DORCHESTER YACHT CLUB.

THE matches sailed Decoration Day wore an entire success, and this may be said more especially of the one-gun start. All the prognostications of the barnnels eshool came to nought, for the start went off without a hitch though quite a large fleet had to get away. The contestants found no fault but enjoyed the new rest the wide awake bit of seamanship called for. No collisions happened and nobody complained. The judges did their business in excellent style and the public for once saw a bit of real match sailing from the smoke of the gun. The start has been received with such favor that the Dorchester Y. C. will adhere to the plan of sending the fleet away simultaneously in the future, and other clubs are expected to follow suit. A protest assalt of the content of the plan of sending the fleet away simultaneously a start was been found to be considered by Rebio against Thorn for crossing before fire, but was a start of the content of the summary as taken from the Eoston Herald:

CUTTERS ON THE DELAWARE.

Ritor Forest and Stream:

More than 100 miles from the sea, our yacht men have caught the cutter fever. Mr. Wirandl, of Kensington, has finished a small cutter, and has in course of construction a larger one—both modeled by Hillman, M., Samuel M., Fox, of Toresdale, has ordered a cutter from Join Driscol, Greenpoint, designed by A. Cary Smith. She will be 401t. load line; draft, oft. Now, arm't you, Mr. Editor, just a little best of the state
COST OF YACHTING.

Editor Forest and Stream:

It may interest many of your readers to know just what living on board a yacht costs. Some people think anyone owning a boat, be she ever so small, is an extravagant, worthless fellow, rapidly going to perdition. But a more economical method of living has never yet been proposed. I refer now more particularly to small yachts, which are my nobily above all others. Of course you can apend any amount of money alloat just as you can ashore, but a reasonable life, hoarding house, or in family or bachelor's quarters. Let an give you my mean during a three days' cruise, so that your readers can see for themselves. If my apread seems limited and modest, it should be remembered that after a hard day beating up against a sheavy wind and sea, a ravenous appetite lends sauce to the most frugal meal which I would not exchange for a royal banquet at Delmonico's and dyspepsia thrown in. For preatise, hot meat piess warmed up, bread tresh or loasted, coffee and spices of lib., bordens condensed milk, butter, salad and fruit. This was varied with boiled eggs and bacon. For lunch, sandwiches, coffee or beer, salad and fruit. This was varied with boiled eggs and bacon. For lunch, sandwiches, coffee or beer, salad and fruit. Supper or late diumer, after coming to, similar to breakfast, with sundry variations. Upon turning in, after a last glance out in the cold at the cable, and a final poke to the riding light, a nightcap of medicinal concation, consisting of hot water, leanon, sugar and distate. Some people may turn up their nose at such fare, but just let me catch them out for a hard day's sail, and I warrant they will lefal to? With a desperate energy they never knew while at the feetive board ashore with a menu half a mile long and four hours left with a desperate energy they never knew while at the feetive board ashore with a menu half a mile long and four hours with a desperate energy to the rose of the cold of the cold of the wood of the cold of the

\$308 a year. Allow for clothing \$100, for books, papers, incidentals, etc., \$100 more, then ninety-eight dollars for the keep of the boat, renewals and sundries, and the tally for the year nicks just \$500. On top of this spend what you choose for visiting ashore and inland vacations, and you have the cost of living a life the gods might envy. The yacht, if built and rigged as recommended in your columns, should be perfectly safe and sound, easily handled as a yakl, and converted going anywhere, with comfort limited only by the circumstance going anywhere, with comfort limited only by the circumstance of going anywhere, with confort limited only by the circumstance of going anywhere, with confort limited only by the circumstance of going anywhere, with confort limited from two to three fons, or 23 to 23t, long, color, with cost balliast, rigged, fully fitted and supplied; ready for sea, will cost about 500 to \$550. With a little judicious selection in the model, and a few hints from some experienced friends, yachting in small oraft becomes the cheapest and by far the most "soul-filling" of all sports. You are at it is wanty-four hours every day, for an outray less than half of what similiar living would stand you in ashore, and all the mental pleasures and physical advantages of the sport thrown in.

An Old Hano.

YACHT STOVES.

WACHT STOVES.

Having just returned from a cruise, during which I was shipmates with a stove anknown to most, let me give you some facts concerning it. With all other owners of small boats, I had long been looking for something really satisfactory, and I flatter myself it has been found at last. The yacht we cruised in is 25ft, deck and has a confortable cabin for two. Our stove is known to the trade as a No. 1 local feet Blazt. It measures about it inches across the droudar base, local point at last. They acht we cruised in is 25ft, deck and has a confortable cabin for two. Our stove is known to the trade as a No. 1 local feet Blazt. It measures about it inches across the droudar base, local point of the store in the bottom reservoir closed. Burns "Practic that the grown with the bottom reservoir closed. Burns "Practic that the grown with the bottom reservoir closed. Burns "Practic that the grown with the oction reservoir closed. Burns "Practic that the grown with the occopied of the mean of the store several times, not a trace of smell could we detect. There was not ever smoke or smell of any kind, while the wicks were lit, excepting at the very start, when the varnish or polish on the fron got of the stove teamor asy. In the practic the store has two casings, through which the air rises to the flame, so that wind will not blow it out. Having been more than pleased both with the results and the naske of the stove, I think it ought to be recommended to yachismee through your paper. The stove cost, I think, \$3.50. Mine was obtained from a dealer on the south side of Beckman street, two doors are self-seaf street, though presumably all stores keep them in stock.

A little care, keeping the oil from spilling and of many particles of the store the cabin.

THE AMERICA CUP.

THE AMERICA CUP.

Editor Forest and Stream:

One of our city papers has copied, apparently from Wilke's Spirit.

One of our city papers has copied, apparently from Wilke's Spirit.

Nova Scotia Yacht Squad the pleasure, as Scorctary of the Koyal

Nova Scotia Yacht Squad the pleasure, as Scorctary of the Koyal

York Yacht Club, in schowledgement of the very courteous invitation of that club to our organization to compete for the American

Cup under the new conditions. It has also appended the following

note:

"Wilkes' Spirit, in referring to the letter, says: 'It will be observed
that there is not a word of complaint as to the terms of the new

that there is not a word of complaint as to the terms of the new

is unaportennallie.

"Wilkes' Spirit, in referring to the letter, says: 'It will be observed that there is not a word of complaint as to the terms of the new deed of gift, or any insinuation that there is anything about it which is unsportenable."

There is a reason for this—and I write now, not officially as secretaring the private character as a yachtsman—and this is it, when the private the state of the private that the private the private that the private the private that the private the private the private the private that the private the pri

TOO HASTY.

TOO HASTY.

THE Herald reviews the Decoration Day's sail, and says: "One Aday's sail has dashed fond debusions to the ground," and all because the few keel boats in a large fleet of crack yuchts did not lead all through the day. The Herald is a trife toe hasty in its verdict, it is hardly a wonder to find the Montauk beat the Norseman. It was to have been expected. The Norseman does not rank as a very feat where are in this world who can hope to cope with his clean cut Montauk with the case in this world who can hope to cope with his clean cut Montauk with becauses as beaten not because site is a keel, nor did not be the says and the latter white. It was boat against boat and former is black and the latter white. It was boat against boat and former is black and the latter white. It was boat against boat and former is black and the latter white. It was boat against boat and Montauk want a board in Norseman, and the chances are the latter would have been beaten even worse, certainly to the extent she was. For the rest we find Valkyr slipping by Oriva, as was to be expected. For the rest we find Valkyr slipping by Oriva, as was to be expected, and we think with six inches are montand appendage morely, and we think with six inches are montand appendage morely, and we think with six inches are montand appendage morely, and we think with six inches are montand appendage morely, and we think with six inches are montand appendage morely, and we think with six inches are montand appendage morely, and we think with six inches are montand appendage morely, and we think with six inches are montand appendage morely and we think with six inches are montand appendage morely and we think with six inches and inches the same in point of principle, Valkyr is a outter. She has the depth, draft, moderate beam and rig of a cutter, and if not a close copy of the modern English racing craft, she is, in point of dimensions, form and sail much nearer the cutter than the orthodox sloop. What she add is hould go to the score of the modern

boat of medium proportions, and varsy counter pretty heat to those ideas.

Whether you allt her through for a little board, just enough to swear by, or whether you take it out in a few inches more keel, is a matter of no moment for speed in smooth water, though for a dash in the open and for accommodations below, the keel is certain to supersede the fin, if it has not already practically done so. The Montauk is the only large yacht recently built with a board, quite an exception to the rule, and pilots have not yet lost their heads, nor do they seem likely to forego their long grip in the sea for a bob-shout jumps and leewardly chopping which are invariable accompaniments to centerboards in rough water. What we should like to see, and what might be semesthing like conclusive, is a year's active racing with

Valkyr in her present condition, and next year trials with the same let of boats after the board has been removed and more lead boited up underneath. Should the job be properly done, and Valkyr fall short of this year's performance, then indeed would the Heruld have something like just grounds for an opinion. For the present the orner of Valkyr is probably congratulating himself upon the aquinous of the property of the propert

her stylish form.

ANTIQUATED.—An ancient turf contemporary, having vented a column of badly-entangled wrath upon the Dorchester Y. O. for a kind of start never proposed, has received the following pithy rebuke from the secretary, Mr. Louis M. Clark: "Dear Sir—The method of from the secretary of the Louis M. Clark: "Dear Sir—The method of start never proposed, has received the following pithy rebuke of the true of the color of the rule of the rule of the property of the rule of the

out rivers with a cat-boati Ha'ha!
HUDSON RIVER YACHT (LUB.—The spring matches were salled
last Monday over the Centennial course in the upper and lower bay.
We are glad to find small yachts giving up were work and coming journel of the spring more like business. It will do the work and coming journel of the cabic classes Lillle, 32t., John Drew and Clara S. 2tf. that, as were cabic classes Lillle, 32t., John Drew and Clara S. 2tf. that, as we ger, were the winners. Among the open boats Sophia Emma, 2lft.
fin, A. Kemp, Jr., and Gussie, 17tf. John. A. Batner, carried off the
prizes. The Goodwin, 19tt. Sin., had a sall over, but did not ge the
oourse.

Sim., A. Kemp, Jr., and Gussie, 17ft. 19in. A. Banor, carried off the prizes. The Goodwin, 19ft. Sin., had a sail over, but did not ge the course.

AMERICAN CANOE ASSOCIATION.—The original draft of the new constitution, as published in this journal, was sent to all mombers of the committee, and as now presented to each member, contained a suggestions of certifications which recognize all the criticisms and suggestions of certifications which recognize all the criticisms are constituted in the postal cards forwarded them by the secretary, so that a final result may be announced.

MAGGES SPEED.—An inquirer wishes to know whether Maggie really could average 13g miles under the most favorable circumsances, as cited in a communication by "Rouge Croix," recently printed in these columns. The speed certainly seems high, being a little over 11 knots, and though the time and course are official, allowance of some sort for tide may have to be made. Possibly our correspondent "Rouge Croix" has the particulars.

HEEDLESS.—Mr. Edward Warren's stylish little 7-ton cutter has been successfully launched from Driscoll's yard, Greenpoint. Length over all, Sift.; too one tood on keel; mark, 3ift.; tooms, 1 card, 1

Livonia by Mr. Jas. Ashbury.

GUTTERS.—Lawlor, of Chelsea, is finishing two small cutters, and Lawley & Son, of City Point, have planked the new 'ton cutter Laywing, building for Mr. Malcomb Forbes and others. Her spars and sails arrived from London recently. The cutter and yawl fleet is growing apace in Boston.

MAGGE.—This 15-ton cutter arrived on board the steamship Kansas, at Boston, June 4, and will be launched and fitted for sea at once. Her owner does not propose to race her professionally, but will join the Hull Y. C. and may sail in local regattas.

HEART'S EASE.—This new sharpie schooner has been delivered by Mr. Clapham to her owner, Hon. Robt. B. Roossvelt, who reports himself well pleased with her, and that on her first trip to Great South Bay she beat "everything" that was met.

NEW YAWL.—Another cabin yawl has made her appearance in New York Bay, concerning whom several inquiries have reached us. New York Bay, concerning whom several inquiries have reached us. New York Bay, concerning whom several inquiries have reached us. Mall Mr. All Mr

Price list of wood and rod mountings free. Our Gepage new Illustrated Catalogue of Fishing Tackle seat, post-paid, on receipt of ten cents in stamps.

SHIELDS'

American Improved Gut Leader

CASTING LINE. Fig. L

My invention consists in adding to a leader a reenforce at the several points where the upper flies are to be attached, by which the size of the line at such point is doubled, the result being that the wear resulty prolonged, and the doubling of the leader in the act of looping on such shell greatly facilitated. Heretofore, in looping the upper flies of a cast about a leader of single gut, the latter soon becomes badly chafed and its enameled surface worn off.

In addition to this its difficult to hold the loop of the deader in the act of looping the shell to flow the sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is not sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly, as a single piece of gut is not sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 1 represents a leader as heretofore in use. Fig. 2 is a leader made in accordance with my inventions of the leader at the point of attachment of the fly 1, and 1, an

THE NEW YORK FISH COMMISSION.

IN another column will be found the views of Commissioner Blackford on trout culture by the State. have long thought that this matter should be left in private hands, for the brook trout is essentially a sporting fish, and, though eaten in small quantities, does not take rank among the sources of food for the people to any extent. Perhaps it was well to try to increase them for a few years, but now, when there is only a small amount of money left to work with, it seems suicidal to neglect the shad fisheries and continue the trout distribution. We are glad to see that Mr. Blackford takes this stand, for there are too many private trout breeders in the State who will supply all the young stock needed.

If it be asked why such a state of affairs exists when one of the Commissioners speaks so plainly against it, the explanation is easy. Mr. Blackford is one of four Commissioners and is in a minority. It has been the habit of the New York Fish Commission to accept the decisions of the superintendent, instead of giving to the superintendent orders which he was to carry out. Thus the Commission appears to have been run by the superintendent, and not the superintendent by the Commission. The Hudson River would have been badly off for a crop of shad three years hence if the United States Fish Commission had not yielded to the request of several State Senators, and sent the million of fry recorded by us a few weeks ago. Mr. Blackford a second lot on the 10th, which were forwarded to Albany and deposited below Greenbush.

It is certainly time that the State stopped the brook trout business and expended the people's money for the purposes of increasing the food supply of the people, which is the ostensible object of the Commission, and the one that they go before the Legislature with when they want an appro-

The present Governor so entirely disapproved of the methods of the Commission as to veto the appropriation last year, and the bill for this year is now in his hands for consideration. The Governor's veto, we speak now by the card, was not on the ground of a want of faith in the utility of fishenture, but solely on the ground that the appropriation was not as fully utilized for the public good as seemed to

WANTED .- More celectric light on the cel question. Adfiress Gym Notus,

SEVERAL DOORS CLOSED

HE Newman bill, to amend the game law of New York, has been killed. The old law will remain in force The back door of that hotel at Otsego Lake will remain closed; several other doors of much the same character have been shut as well, and we should exceedingly regret ever to see them opened.

Now that the Newman bill is dead, there is no call to discuss further its merits and demerits. We took some pains, at the proper time, to explain what some of its ob-noxious clauses meant. The bill was the Newman bill of 1881, amended by the Albany convention of last March, and subsequently by a committee appointed at that meeting. The revisers did not succeed in eliminating from it all of its objectionable features; and they incorporated in it certain provisions which provoked opposition so soon as their true nature was exposed. As sent to Albany, the Newman bill was complex-in parts obscure-and in some essential points unintelligible. It was disgraced by clauses which served the interests of individual greed, while being wholly inimical to the spirit of right game legislation, and grossly unjust to the community and to sportsmen.

The reason for this appears to have been that while the great majority of the gentlemen present at the Albany convention were honest enough themselves, they failed to perceive that some other "delegates" were there to manipulate the convention for their own mercenary ends. Each man was presumed to represent the best interests of his own section, and there was manifested a general willingness to grant the wishes of individual delegates without scrutinizing carefully enough the wisdom of their demands or their own honesty of purpose in making them. The convention presumed too much upon the potency of that esprit de corps which is more or less rightly fancied to exist among sports men, but which in this particular instance did not prove to be very strong.

The plain truth is that some of the prominent workers in this annual game law tinkering are not inspired by any great desire to have the provisions for the protection of game and fish made more perfect. Their motives are wholly selfish. Their rant about protecting the game interests of the State is all humbug. They simply want to put money into their own pockets at the expense of the public, and they care not a rap about anything else. The only imperfection in the game law for them is where it interferes with their own business, or that of men whom they are paid to serve. The present law is much better than any substitute they would pro They will bear watching, and when it comes to game legislation in this State again, as it probably will next spring, we caution the shooting and angling public to examine carefully the amendments proposed and to inquire into the motives and aims of those who propose them. And it is well enough to remember that it is sometimes much easier to keep a door shut than to shut it again after it has been opened.

PLUCK

THE annals of outdoor sports furnish many notable instances of extraordinary pluck on the part of individuals whose physical infirmity would appear to wholly debar them from such pastimes. In our issue of September 1, 1881, was given an account of some famous English fox Among them was the Rev. Edward Stokes blind man. He rode with the best of them, being attended by a groom, who rang a bell whenever they approached a fence or hedge, and the two went over together. not the only instance given of blind huntsmen. An equally remarkable case was that of an extraordinary character, one Thomas Roberts. This personage was born without arms below his elbows, and without legs below his knees in spite of this fragmentary character of his limbs, Roberts, with the aid of a vast amount of pluck and a small protuberance on one arm which enabled him to hold the bridlerein, was a skillful rider, and followed the chase all his life. What may or may not be thought still more remarkable about this individual is the fact that he thrice entered into the holy bonds of matrimony.

In our own country there are many examples of crippled men whose penchant for sporting or fishing has encouraged them to persevere in the pursuit of these sports. It is possible for a one-armed man to acquire great skill with the We have in mind a Western sportsman, known to many of the readers of this journal, who has but one arm, the right one. He uses a light gun, which he "breaks" over his left shoulder, letting it rest there while he slips in the Then by a dexterous jerk the gun is closed, brought to position, discharged and the game killed-all in quicker time than his two-armed shooting companion can accomplish the same thing,

Occasionally there comes to the Forest and Stream office a gentleman, who is an expert with rod, gun, paddle and pen. Some years ago he lost a leg, but this did not deter him from indulging his taste for shooting. Equipped with a crutch, which has been fitted with a broad flat base, and carrying a light gun, our friend makes his way over the snipe marshes, and bags his birds, too. Naturally he finds canoeing the most enjoyable recreation, and has cruised on many of the American and Canadian waters. In another column our entertaining correspondent, "Kingfisher," gives an account of the angling methods of one of his camp companions, who practices the gentle art under what would appear to be serious disqualifications.

Instances of pluck similar to those mentioned may have come within the notice of most readers of this journal.

THE NEW JERSEY FISH COMMISSION.

TOTWITHSTANDING the fact that the Legislature of New Jersey has made no appropriation for fishculture. the Commissioners keep up their interest in it. They recently made their annual excursion down the Delaware River with a few invited guests on a steamer, at the personal expense of Major E. J. Anderson, of the Commission. It is very evident that this gentleman does not mean to abandon the cause as the Legislature has done, and his public spirit ought to shame them into doing something for fishculture next year. They have never voted much money in New Jersey for fishculture, and yet much has been accomplished through the activity of her Commissioners, who have given their time and attention to the wants of the people.

New Jersey is so situated that it has but one good shad river, or, rather, half of one, for it shares the Delaware with Pennsylvania; but the amount of food which comes into the State from this river alone, if we take into account all kinds of fish, is enormous, and its loss would be severely felt. other rivers produce considerable food, especially the Raritan, Passaic and Hackensack; and might be made to produce more. It seems a late day to argue the question of fishculture, and if the members of the New Jersey Legislature do not know that whatever produces any one item of food, tends to cheapen all others, they are probably too old to learn, and the best thing for the State would be to put some new men in their places. We imagine that the per-We imagine that the pernicious idea of personal legislation lies at the bottom of this question, and if a member happens to live in a county having no streams to stock, he possibly takes no interest in it because he supposes that his constituents do not care about it. and his re-election depends upon their approval of his course Instead of entertaining broad views of the welfare of his State, he looks only to his own county.

New Jersey has a large interest in the sea fisheries, and under an enlightened system of fishculture could, with the assistance of the United States Fish Commission, profitably expend \$20,000 per year in increasing the supply of food which, whether consumed at home or sent to New York, returns its full value to the fishermen of the State. The gentlemen who are serving as Fish Commissioners, do so without pecuniary reward, being actuated merely by a desire to do good, and for all this they receive occasional abuse. One of them is the State Comptroller, Major Anderson, another Dr. Benjamin Howell, who owns, as his ancestors since the time of William Penn have owned, the fisheries just below Philadelphia on the Jersey shore, and the third is Mr. Theodore Morford, of Sussex county. There are also fish wardens in various localities, generally unpaid enthusiasts like the Commissioners, and in the hands of these several gentlemen with a few assistants the New Jersey tishing inteests have been fostered for a decade or more.

The inspection of the Delaware River shad fisheries included a trip from Trenton down to Gloucester, stopping at the principal nets and shad grounds, and interviewing the fishermen. The day was rainy, but this did not dampen the ardor of the Commissioners or their guests. They learned that the yield was not as good this year as usual, on account of the cold backward spring, but the fishermen all predict a big run as soon as the temperature rise; and they attributed the good catches of the last few years to the hatching operations of the Commission. As a consequence of the scarcity of fish, prices have ruled high, and the fishermen are making as much money as if they were taking more fish, except at the fisheries at Howell's Cove, where they have contracted their catch to the freezing company at Philadelphia at \$14 per hundred for the season,

After seeing the big net at Gloucester hauled, and listen-

ing to the cheerful songs of the colored men who were tugging at the oars to bring its half mile of knotted twine to shore, the party went ashore to Thompson's hotel and feasted on shad served on a plank of New Jersey oak, a feast not to be had in the vicinity of New York, more's the pity. The party consisted of the Commissioners, Fish Wardon Ore, Joseph Becker, and John Y. Foster, of Frank Leslie's Illustrated Newspaper, Mr. W. I. Hunt, of the Newark Advertiser, and others.

SPRING MOUNTAIN LAMB.—To kill mountain sheep is a laudable ambition that has fired the heart of many a "tenderfoot," who desires not only the glory of capturing the wary rock-climbers, but also looks forward to feasting on their tender flesh when the capture has been made. There is the best reason in the world why those who love the delicate flesh of this game should spare it in spring and early summer, in fact until the lambs are well grown and able to travel. In the mountains where the sheep live, one of the finest green things to appear in the spring is the wild onion or leek, and this is eagerly eaten and enjoyed by them, so that for a while the flesh tastes so strongly of this plant as to be quite uneatable. The flesh of the bighorn is, perhaps, the most delicious meat of the mountains, but those who wish to enjoy it at its best should not eat it before the autumn months.

MAJOR B. H. Schley .- We learn with regret of the death of Major B. H. Schley, at Frederick City, Md., June 6. Major Schley was an intrepid soldier, a true sportsman, and a gallant gentleman. He was one of the best shots in Maryland. The sound of his gun from boyhood has echoed death in all the mountain sides, hilltops, ravines, rivers, streams, rivulets, swamps and gulches in the fields of Western Maryland. Major Schley was a Union soldier, participated with honor and distinction in almost all the engagements of the war, from the firing on Sumter until the surrender of Lee. He was a brother of Prof. Frank Schley, author of "American Partridge and Pheasant Shooting," and his death has caused great sorrow.

THE GASTON CLUB.—We regret to learn from our corre spondent, Col. Thos. Goode Tucker, of Gaston, N. C., that the plan of the proposed Gaston hunting club has not proved feasible. It was the intention of the promoters of the club to form a society of twenty members, ten from the South and ten from the North. The ten from the former section were secured, but the requisite number from the North did not come forward. The plan of the club was such as seemed to promise much enjoyment to those who should join in it, and we hope that the project has not yet been wholly aban-

THE ADIRONDACK SURVEY,-Mr. Verplanck Colvin, Superintendent of the Adirondack Survey, has appointed Mr. Fred Mather, of the Forest and Stream, naturalist of the Survey, with instructions to collect and report upon the fishes of that region, their species, food, habits, life, etc. party will enter the woods at the Blue Mountain lake tomorrow. Some letters from Mr. Mather may be looked for in our columns.

YE ANCIENT ANGLERS .- Philadelphia boasts an angling club which is over seventy years old. The Tammany Peashore Fishing Club of that city was organized January 18, 1809. Of the original sixty members but two are now living. The club has a well-appointed club house on the Delaware River, at a point which is noted for its excellent white perch fishing.

"PADDLE AND PORTAGE."-Mr. Steele's new Maine book is just from the press. It is a handsome work, and will be noticed at length in our next issue.

FOREST AND STREAM FABLES. V .- THE FOOLISH FISH.

N a certain river there once lived a great Bass, who, after a I time, found the little fish upon which he mostly fed be-coming scarce and wild, so that he had to search far and wide, and use all his speed and skill to catch enough to satisfy the cravings of his stomach. Being one day upon such quest, and so far with no great luck, he noticed, as he swam past a tall growth of rushes, a slight current issuing therefrom; and pushing against it through the water weeds, he presently found himself in the broad pool of a little brook which was swarming with minnows. He had no trouble to fill himself with them in a few minutes, and went home happy, rejoicing that he had at his command such a bountiful supply of .food.

Being in no way selfish he told his brethren, of whom there were half a dozen, of his discovery; and every day he and they got as many minnows from the pool as they could eat, without any apparent thinning of the numbers. But one day without any apparent thinning of the numbers. But one day as our Bass lay comfortably in the shade of the lily-pads be-fore the door of his house, his neighbor Pike came along, and to him he told his lucky finding of the minnow brook, and even led him to it. The Pike went home full of joy and news, and imparted the latter to all his family, of which there were at least a hundred, all greedy fellows with capacious maws. In a month the brook was as barren of minnows as a cistern; and the foolish Bass went hungrier than ever.

MORAL.

If thou knowest a well-stocked game cover, it is no kindness to thyself, thy friends nor the game to make it known to all

The Sportsman Tourist.

RAMBLES THROUGH NEWFOUNDLAND.

RAMBLES THROUGH 'NEWFOUNDLAND. In the gray dawn of an autumn morning I set out with two companions for a week's hunting in the wild region stretching inland from the placentiæ, in the Peninsula of Avalon. It is customary in Newfoundland when you set out for a few days' hunting, or "going into the country," as the people say, to provide yourself with provisions for a week. Once you leave the coast you are in a savage wilderness, for in Newfoundland the chief employment is catching cod, and the larger proportion of the population live in their whitewashed cottages, among the rocks overlooking the ocean waters, like seabirds. On the journey in question our party was provided with a row boat, in which we put three guns, a hatchet and our provisions. We sailed several miles up through an arm of the sea, known as the South East Arm, a strip of water averaging not more than half a mile in width, and at rising water rushing with the fury of an avalanche up the reaches and between wild hills, clad in evergreens From where we left our boat we had to travel about twelve miles to the point at which we were to make our first halt.

up the reaches and between wild hills, clad in evergreens From where we left our boat we had to travel about twelve miles to the point at which we were to make our first halt. In the late autumn in Newfoundland the interior of many portions of the island, particularly that of the Peninsula of Avalon, is literally crawling with game. The cariboo, a variety of the reindeer (*Oerous tarandras*), breeds in actual swarms in various localities, and may be found in the autumn at favored points—the valleys of streams winding down to the bays—in large herds. Then the willow grouse (*Lagopus albus*), erroneously called "partrudge" all over the island, is found in abundance near about and in the woods, while the rock parmigan (*Lagopus rupestris*), or mountain partridge, as it is called in the island, in the autumn, especially on foggy days, is found sentinelling the very highest and bleakest ridges on the island. The saughter among these birds by the fishermen, living down in the coves and crevices, of a foggy day, is inconceivable. The birds will stand upon the bare ridge in flocks, looking in the fog as large in turkeys, and when they hear the huntsmen they close together in bunches, thus exposed to the raking fire from the long-barreled shot-guns.

large in turkeys, and when they hear the huntsmen they close together in bunches, thus exposed to the raking fire from the long-barreled shot-guns.

No one, unless he be too lazy, need be without game for the greater part of the year. In Newfoundland, and, as a matter of fact, go into the houses of the people living in the coves and crevices, and nine months out of the year you will find their tables supplied with game—with the cariboo, the red duck, the curlew, or plover, or snipe, or "beech bird," the "mur," the wild goose, and last, but not least, with the "partridge," After the cod-fishing season is over, during which there is no time for gunning, and little game to be had, the mother will say to the husband or to one of her sons, "The duck or the partridge are all gone; I wish you would go out in the norning and get me some more." And straightway with the next morning's light he climbs over the gray hills, where he finds abundance of game, kills a dozen birds or so, and then returns. I have sat in the gray dawn of a foggy morning upon one of these high, bleak hills, a mile in from the sea, awaiting sturrise to get a shot at the birds; and heard the crowing of many hundred plarmigan in the air all around me at once; and the sound of innumerable wings in the early light whuring around me on every hand. After two hours' shooting I have frequently returned with twenty or thirty birds slung on my gun and across my shoulder.

Go into any one of the fishermen's cottages and that which

on every mant. After two hours shooting I have frequently returned with twenty or thirty birds slung on my gun and across my shoulder.

Go into any one of the fishermen's cottages and that which you first notice is the porch, bristling with rows of spikes, upon which to hang the game. Never, "or hardly ever," are these spikes all empty. From the 1st of September till the last of October you find them ranged with fresh water ducks, wild geese, and willow grouse, rock ptarmigan, plover, curlew, snipe and small game; from November till the 1st of April you find the rock ptarmigan, willow grouse and the various kinds of sea ducks there. Then from the 1st of April till the heat of summer they are lined with sea pigeons (black guillemot), the common guillemot, and thick-billed guillemot, the two latter known among the inhabitants as "murs" and "turrs," from the cry they make exactly resembling these words. And often happening in you find a haunch of venison hanging upon the "venison pin," or two or three pairs of Arctic hares or, in later years, the American hare, a few pairs of which were imported from Nova Scotia some years ago, and have now swarmed over a large portion of the island.

I have made this digression from my subject that the

American hare, a few pairs of which were imported from Nova Scotia some years ugo, and have now swarmed over a large portion of the island.

I have made this digression from my subject that the reader may be the more fully able to understand what I have to tell of my further "Ramilles" through the country.

As I have said, after leaving the boat a tramp of twelve miles through soft marshes and scrubby woods, up hills and down valleys, lay before us. But a bracing wind blew over the hills and refreshed us when we began to weary of our tramping and our loads. The interior of Newfoundland differs widely from the scenery of the inland portions of the continent. Forest for the greater part is only found lining the banks of the streams; if you find it elsewhere it exists in clumps or "drokes," as the people say, about swampy regions. The clear spaces between these clumps are generally soft marsh, through which in crossing the traveler will sometimes sink to the middle. Frequently large ponds, the waters looking black as ebony, are found in such districts, and it is here the Newfoundland beaver (Castor fiber) plies the trade of tree cutting, damming streams and building houses all his life, without interruption.

As I have said, you may wander for weeks through the interior of the island and not meet a human being; unless now and again you happen upon a hunting party. The hunting parties, therefore, frequently build shanties or "tilts," as they are called by the people, in the densest patch of forest that can be found. The tilt is built of logs laid horizontally upon each other, and a hole is lett in the top of the building for the escape of the smoke. After the hut is up the hunters proceed to strip the bark off a number of whitness growing round about it. In a year these trees decome what are known as "whitings"; that is they are dry, and ring again when you strike them with an axe. Thus the party coming to the tilt subsequently finds a number of whitnings growing about the camp, and, cutting some of them, he has ma

wild, secluded haunts but sportsmen.

We struck out for the Sawyer's Hills, and decided to put up in a camp located in the heart of "Black Droke." On the way out to the hills we found numbers of "partridge"

upou the ridges and bill-tops, and whirring up out of the marshes and brushwood at every few steps. We had no dogs with us, for, except on clear, windy days in districts much shot over, where the game lies close, a dog is not necessary. We shot about a score of "partridge" each, hiding our game in the brushwood as we went along. We might have killed many more, but we would be unable to carry them home; and more than this, we expected a load of venison or of beaver. We brought a dozen of the willow grouse on with us to the camp to rosst, should we fail to obtain venison or lack duck. Towards sunset we reached the "Sawyer's Hill," a region whose wild beauty was indescribable. The nilltops were bathed in the glory of sunset, presenting a grand contrast to the black turns here and there, and the gloomy forests stretching down to the dells below. As far as the eye could see the scene alternated with hill and dale, marsh and forest patch, lake and stream.

atternated with fill and cane, marsh and forest patch, macand stream.

On some of the many streams in view grew strips of
forest, fringing out upon the plains; along the banks of
others stretched wide ranges of wild meadows covered with
long grass, which earlier in the season had been bespangled
with wild flowers, filling the air with perfume. Several
detached portions of forest, too, standing like gloomy
islands, were within the view. One of these stood upon
the banks of a stream, winding like a silver riband out
among the many hills, and through long, wild meadow
regions toward the sea. Into this last-mentioned forest
patch, just in the deepening twilight we went, for in it was
the "tilt" in which we were to pass the night. A few
minutes' walk brought us to a small space, in the centre of
which, in the deep shadow, we saw the camp. The door
was securely fastened, and on entering we found the inside
dry and the air wholesome. On making a light we found it
stocked with cooking utensils, knives, forks, spoons, etc., and which, in the deep shadow, we saw the camp. The door was securely fastened, and on entering we found the inside dry and the air wholesome. On making a light we found it stocked with cooking utensils, knives, forks, spoons, etc., and the ubiquitous bag of salt and tin of pepper. One of the party taking an axe sallied out to cut a "whiting," and was followed by the writer with a lantern. After we had roasted upon a spit, before a roaring camp fire four of our willow grouse, which were as plump and fat as if fed on corn, we held a council to decide the hunting programme for the week. It was known that on the outer edge of the woods in which we were camped there was a large, deep, black lake, and that there was in one corner of it a beaver town. Indeed some hunters who had visited this place related the most extraordinary stories about the cunning of the beaver in this lake. It was said they resembled old men, and more in reality approached that mystic link which the late deceased scientist said connected the genus biped with the quadruman than did the monkey himself. They told that the beaver had carried off their kettle and their axes, and in one night so dammed up a stream leading from the lake as to overflow a large tract of marsh land, and make it impossible for the hunters to get out to Deer Valley, without either fording the angry stream, or taking a circuit of many miles. We decided the next morning to commence operations,

We decided the next morning to commence We decided the next morning to commence operations, with a view to capturing at least one family of these notorious beavers, and leave the deer shooting project till later in the week. Then we began to repeat the stories which for a hundred years had been told, and believed by many, of won-drous things seen and hear, in the still night in this remote wilderness. We sat till our camp fire burned low, then replenishing it we lay down upon a couch of fresh evergreens lolded in our blankets, lulled to sleep by the gentle complaining of the night wind in the thick branched trees around our cann.

ing of the night wind in the thick branched trees around our camp.

**

With the early dawn we were astir. Having partaken of the morning repast we sallied out to the "Enchanted Lake," as the superstitious hunters had named it. An hour's tramp through the dense dark wood revealed to us the spot we sought. It was a large pond, almost surrounded by lorest. Its waters were deep, black and glossy, and the trees which gree wown to its edge, were reflected in it as in a mirror. At its further end from where we stood was a marsh, through which a small brook, evidently the outlet of the lake, found its way. Around the edge of the lake were a number of mounds, which to the carcless glance would appear a mer inequality of the bank. In some parts these mounds were in groups, and beside some of them fay a number of dead trees, or branches, which on being examined showed that they had been gnawed off at the root. These, then, were the beaver houses, and that group of mounds, among which one of our party stood with his axe, was a beaver town. And looking across the lake we espied several black heads appearing here and there on the smooth pond surface, making only the slightest milk-like ripple, then disappearing; and we saw two of these black heads, each bearing a small tree along, leaving the same upon the bank, then disappearing somewhere in the subternnean abodes so numenous around the lake. Now we knew it had been the bitter experience of many a hunter, who had visited even this very pond, to begin with his axe at the top of the beaver house, and on reaching the interior of the same to find the apartments warm but unpty. We had known, too, of hunters who had sat from dawn till evening on the bank watching for the beaver to go out of his house in the morning, or to return to it in the evening, or to engage in building during the evening, and to have been disappointed. We adopted a plan that was new and original with ourselves. Indeed, I must claim the credit of originating the modus operandi.

It is well known that the be

down about sixty small stakes, which we pointed.

Proceeding quietly out to the pond edge, we drove these stakes down about four inches apart, along in front of the houses, for a distance of about ten yards. We were tolerably certain, when we had performed this much, that the beaver in these three houses had not gone out that morning, and that they were our prisoners, unless their means of supterranean outlet were very extensive. Then we set to work with our axes, beginning first at one house. We soon came to the frame work, which consisted of small sized birch trees laid horizontally and crossed at the ends. Where the width exceeded an inch between the sticks, branches were placed there, and upon the outside of this a considerable coating of mud was closely packed.

When the first axe broke through the rafters we knew our

prey had not remained in the house, and a minute revealed to us the inside of the much-talked of beaver's home. The outer portion was clammy and wet, but the inner portion was dry. In the latter place the beaver sleeps. In the sleeping apartment, too, were the family provisions, consisting of bark gnawed from the trees, and willow and birch branches. We likewise found a large quantity of berries, from all of which it was plain that the ramily had begun to lay in their winter supply of food. But we were less inclined to take pleasure in looking upon the works of the "old men of the ponds" than we were to murder their authors.

I stood ready with my double burred while my companions

pleasure in looking upon the works of the "old men of the ponds" than we were to murder their authors.

I stood ready with my double barrel, while my companions vigorously plied the spade and axe upon the longest of the passageways. They dug and chopped away eagerly, and found in the extremity of the passage, close to the stakes driven against the bank, the unfortunate family. They lay huddled together, confused and terrified. Strange to say, we were not so brave before our cringing victims as might be supposed. "Whatever you do, mind their teeth," said one; and verily, when I thought of those teeth, which are capable of cutting down large forest trees, I was none the bravest. bravest.

bravest. There lay the five animals twisting and rolling and darting at the too narrow interstices of the imprisoning stakes, and we knew not how to dispatch them. Then the two made an onslaught with a pair of heavy cudgels, I all the while waiting with my gm. The cudgel method succeeded, and in a few minutes two old beaver and three younger ones lay trophics at our feet. We stripped off the skins, took a few pounds of steak off the fattest of the number, and repaired back again to our camp, for we were too tired to commence the attack on a second house.

Late in the afternoon we set out from the compagning to

trophies at our feet. We stripped off the skins, took a few pounds of steak off the fattest of the number, and repaired back again to our camp, for we were too tired to commence the attack on a second house.

Late in the afternoon we set out from the camp again to examine the outlet to the lake. We found that the stream was on a level with the lake for nearly a quarter of a mile from its beginning, and that the marsh through which it ran had the same level also. At about 400 yards from the pond we found that the beaver had dammed up the stream by means of trees, stones and mud; the whole mass, compactly put together, presenting an irresistible front to the current. The effect of this dam was to bring the waters of the stream between the dam and the pond on a level with the marsh, completely flooding the latter, and making the abodes of the beaver in around the rim of the pond practically unapproachable. The "old men" did not look for invasion through the dark forest which grew behind their lake.

We set at work, cut away the dam, and created a deluge over the marshes for nearly a mile below, and consternation in all the beaver houses around the bank of the pond. It being now sunset we retraced our steps back to the wood to seek out some convenient point from which to watch the strange operations which we had heard the beaver carries on through the night. It was near the full of the moon, and from our chosen place we could see objects pretty distinctly round about us for several hundred yards.

We had not waited more than half an hour when almost simultaneously we saw a number of dark objects enter the pond out of the woods by the mouth of the stream to which have alluded. We at once knew that these objects were beavers, and from their great numbers that they were engaged in some special enterprise; added to this each one had grasped a small tree in its mouth, half pushing half towing the same out toward the stream's mouth. But what we could not account for was that all the beaver—and there could mot be less tha

and a strange sight it was to see him, not unlike a queer old man, peering toward us through the gloomy light of the moon. But he resumed his work soon and toiled on. After every stick or two was hid down he would take up a handful of earth, that is he would gather as much as he could in his flippers, pressing it up against his throat. He would gather a number of such handsful, and put the whole between the woodwork.

Sometimes he would get the alay from the hand and once

between the woodwork.

Sometimes be would get the clay from the bank, and sometimes he would dive into the pond with it. We had not observed him, as the popular belief has it, using his tail as a trowel; the only use he made of his tail was to apparently express emotions of satisfaction now and again at the progress of his work by tiapping the said caudal appendage smartly on the ground or upon the surface of the pond as he dived. We watched the operations till late in the night, fascinated on the one hand by the almost human intelligence of this solitary creature building a house for himself in the still night, by

the moonlight, and the general operations carried on in con-cert by the rest of the community. That night we sleph soundly, and set out the next morning marveling much at the object of the community of enterprise we had night before.

night before.

Going down the stream the mystery was soon explained, for there we found that the dam which we had cut away the afternoon before had, during the night, been replaced by the industrious old men of the pond. Of the other two houses which during the day we raided, one was deserted, but in the other we found four beaver, all seeming of about the same age.

came age.

In the two days we had thus captured nine beaver, so we decided to strike out on the morrow for a "flock of deer," which, from certain signs we had seen, we knew had recently passed down the valley to the south of the work of the wewere camped.

T. E. COLLINS.

TORONTO, Canada,

CAMPS OF THE KINGFISHERS.

IN SEVERAL PARTS-PART II.

BEFORE the first gray streak of dawn the veteran and I were cutting our way through a heavy bank of white fog that had settled around the head of the lake, in search of the meuth of the river connecting with White's Lake above. Where it entered the lake there was quite a strong current flowing through the long, trailing grasses and lily pads, and only for this current we would have missed the entrance, as the shore line had the same swampy appearance as far as we could see in the fog and morning darkness. Once in the channel, a few rods took us out of the swamp to where the banks were well defined and which could almost be touched with the oar on either side, so narrow was the stream.

A little further up the stream made a sharp turn to the left, and a few rods further an abrupt kink to the right headed the boat nearly in the opposite direction, and we had made

and a rew rods in the an abrupt kink to the right headed the boat nearly in the opposite direction, and we had made the passage of "Fiddler's Elbow," as it is called by the lumbermen, without the boat once trying to climb the bank. This passage was no easy feat on a dark, foggy morning. From here up to White's Lake, a quarter of a mile, perhaps, the canks are lined with trees and bushes lapping the water and the stream continues narrow and shallow, the average

and the stream continues narrow and shallow, the average depth being not more than twenty inches.

Just before entering the lake we passed under a stout wooden bridge spanning the stream where the section line road crosses it, and a few yards above this we took a drink out of a clear, cold little stream coming in from the left, which is said to have trout in a mile or so above, but this is a particular forms doubt.

which is said to have trout in a mile or so above, but this is a matter of some doubt.

We learned afterward that a short distance up this stream is the first grist mill that was built in that region. As there were no roads and few trails through that country in the early dys, the first settlers packed their grists on their backs for miles to this mill to be ground, or brought their grain in dugouts and cances from far up and down the lakes. Horses and oxen could not be used for lack of roads, and the few grocenes and luxuries that graced the pioneer's table were backed in the same way from the nearest settlement, often a packed in the same way from the nearest settlement, often a distance of twenty miles. Verily the by-ways of the early settler of Northern Michigan were rough, and well calculated to develop the brawn and muscle and brains of a new coun-

try.

Passing out into the lake the veteran tied on a troller and rout a hundred feet of line, to see, as he said, "if some hungry pickerel or maskalonge that had gone to bed supportess would not be hanging around the belt of rushes looking for an early breakfast." If, however, any of hed supperless would not be hanging around the bett of rushes looking for an early breakfast." If, however, any of the tribe of Esox were in the vicinity, they were still in bed or too smart to be fooled by the glittering sham; and after skirting along the west shore for half a mile, he reeled up and laid his rod in the boat, as we did not care to waste time in a pace slow enough to beit-fish.

and laid his rod in the boat, as we did not care to waste time in a pace slow enough to bait-fish.

Daylight was abroad now, and soon the glint of the sun rays showed through the treetops, and after a time lifted the mists from the water and gave us a view of the dark green shores on either side.

This lake is about two miles long and not much over a quarter of a mile wide at any point, and the general course straight. It is a very pretty sheet of water, and along the belt of bulrushes and lines that line both shores may be had good bass and pickerel fishing, with an occasional chance at a maskalonge near the head. Near the upper end, on the right as you go up, is Wilson's saw mill, run by a natural spring of water that heads back in the hills near half a mile. This is a remarkable spring, not only for its large volume, but for the clearness and coldness of its waters, and it will not be time wasted for the tourist or angler passing through those lakes to pay it a visit. The stream is of quite good size, with a uniform flow of water the year round, and the variation of temperature is very slight. Across the ravine through which it flows, and near the lake, a dam sixteen feet high has been built, which gives a fine head of water for the little turbine wheel that runs the machinery.

The mill pond, of several across in extent, would be a famous place for trout, and we were pleased to learn that.

The initi pond, of several acres in extent, would be a famous place for trout, and we were pleased to learn that Mr. Wilson had decided on the very sensible move of stocking it with a few dozen from Cedar River before the season closed. [The writer hereby notifies friend W. that he will take kindly to an invitation to cast a modest fly into the pellucid waters of his pond as soon as it may be in working

order.1

Keeping straight on we entered the mouth of the river Keeping straight on we entered the mouth of the river at the head of the lake, and after a sharp pull of half a mile pushed our way through a narrow channel almost closed with grass and lilies, into the pocket at the foot of Bower's (or Bauer's) Lake, another lovely sheet of water that looked charming in its setting of evergreens and drooping bushes that grow nearly all around it to the water's edge. This is a feature of all these upper lakes. A comfortable landing can scarcely be found anywhere, for the swamp cedars and bushes that overhang the water and the shore lines, save at rare intervals, are matted with broad lily leaves or bordered with rushes that grow in places many yards out into the water.

After a short breathing spell, necessary to the writer after the sharp pull up the river, we hooked on a speckled frog and prepared to fish this lake to see what was in it in the way of sport.

and prepared to fish this lake to see what was in it in the way of sport.
